Deputy Superintendent of Census Operations, West Bengal

PUBLISHED BY THE SUPERINTENDENT, GOVERNMENT PRINTING, WEST BENGAL.

PRINTED BY SREE SARASWATY PRESS LIMITED,

32, ACHARYA PRAFULLA CHANDRA ROAD, CALCUTTA-9.

Price: Rs. 25.00 or 58 sh. 4 d. or 9 \$

PREFACE

THE DISTRICT Census Handbooks published for the first time in 1951 were an important achievement of the last Census. The Government of West Bengal decided to print and publish the District Handbooks for this Census also. The excellent plan adopted in the 1951 series has almost been followed in full for the present series.

The first District Census Handbook, published already, is on Malda, and the present volume is the second in the series.

The volume has been divided in three parts, the first a brief introduction of the district in its various aspects, a gazetteer of place names, and some important appendices, the second a compilation of various administrative statistics and census tables, and the third a compilation of basic economic data for the smallest administration unit—the mauza, indicating in addition the basic amenities available in each village (such as educational, medical, postal, electrification or library). An alphabetical list of all villages and towns has also been given for all the police stations.

I am deeply indebted to shri Asok Mitra, I.C.S., Registrar General and ex-officio Census Commissioner of India for having given me the opportunity to edit the West Bengal District Census Handbooks and also for his kind advice and guidance all through the work.

I am grateful to Shri J. C. Sengupta, I.A.S., formerly Superintendent of Census Operations, West Bengal and Sikkim for kindly associating me with the 1961 Census Operations since the very beginning.

The present Superintendent of Census Operations, Shri J. Datta Gupta, w.B.C.s., was the District Census Officer of West Dinajpur and it was under his able captaincy that the Census enumeration was successfully taken in West Dinajpur. He took pains to go through the draft and offered various suggestions for its improvement. Shri S. Sinha, w.B.C.s., Officer on Special Duty cheerfully enthused me in the work with many useful suggestions.

- Shri S. Dutt Mazumdar, I.A.S., Secretary Home (C & E) Department very kindly lent me all support for expediting publication of the Handbooks. Shri N. R. Chakraborty, M.A., W.B.C.S., Assistant Secretary Home (C & E) Department treated Census matters with sympathy and utmost despatch.
- Shri B. K. Chatterjee, I.A.S., District Magistrate, West Dinajpur, Shri M. M. Sinha Roy, Barman, W.B.C.S., Subdivisional Officer Sadar and Shri S. M. Chatterjee, W.B.J.C.S., Balurghat helped me in collecting various useful information on the district.

To all my census colleagues for many forms of assistance, specially to the Printing Section headed by Shri R. C. Bhar, Printing Inspector ably assisted by Shri A. R. Kar and Sri R. Chakraborty correcting the proof copies and seeing the publication through the press quickly, to Sarva Shri M. C. Sarkar, J. N. Bose, N. C. Sarkar, A. K. Ghose, S. K. Neogy, P. Dutta, S. Chanda, B. Chakraborty, P. Chakraborty, S. Das Sharma and A. Mondal amongst others for good work done in compiling and test checking the materials pieced together in this volume, I remain ever thankful.

Shri S. K. Majumdar as Head Assistant of the Census Office has rendered commendable services for expeditious publication of the volume. My grateful thanks are also due to Dr. (Miss) P. Sengupta, Ph.D. (London), Map Officer to the Registrar General, India for arranging quick vetting of the thana maps by the Director, Map Publications, Govt. of India.

My thanks are due to the management and staff of Sree Saraswaty Press Ltd., Calcutta for the excellent printing of this volume.

Dated, Calcutta

NOTE ON SPELLING

In the notes and tables the spelling of the police stations follows generally that adopted by the Home (Police) Department, and of towns by the Land & Land Revenue Department, Government of West Bengal.

In the District Map appearing in the frontispiece, which has been prepared in the office of the Director of Land Records and Surveys, Government of West Bengal, the names of the police stations have been spelt as per the records of that office.

PART I

INTRODUCING THE DISTRICT

INTRODUCTION

The persent of West Dinappur is a product of the multition of Bengal in August, 1947. But since then district has undergone several significant changes to geographic content. It has expanded in area and reorganised its administrative structure. After the Partition the district was formed with that dottion of the Old Dinappur District of undivided lengal which fell to the western side of the boundary.

The partition award of Sir Cyril Radcliffe outlined the boundary between the two Dominions in this region in the following words:

"The line shall run along the boundary between the following Thanas:

Haripur and Raiganj; Haripur and Hemtabad; Ranisankail and Hemtabad; Pirganj and Kaliaganj; Bochaganj and Kaliaganj; Biral and Kaliaganj; Biral and Kushmundi; Biral and Gangarampur; Dinajpur and Gangarampur; Dinajpur and Kumarganj; Chirirbandar and Kumarganj; Phulbari and Kumarganj; Phulbari and Balurghat. It shall terminate at the point where the boundary between Phulbari and Balurghat meets the north-south line of the Bengal-Assam Railway in the eastern corner of the Thana of Balurghat. The line shall turn down the western edge of the railway lands belonging to that railway and follow that edge until it meets the boundary between the Thanas of Balurghat and Panchbibi.

From that point the line shall run along the boundary between the following Thanas:

Balurghat and Panchbibi; Balurghat and Joypurhat; Balurghat and Dhamairhat; Tapan and Patnitala; Tapan and Porsha."

At the formation of the district of West Dinajpur, the entire area covered by it was declared as one subdivision, styled as the Balurghat Subdivision. In July 1948, a new subdivision styled as the Raiganj Subdivision was created with the police stations of Raiganj, Hemtabad, Bangshihari, Kushmundi, Kaliaganj and Itahar. The following notifications were issued by the Government for the reorganisation of the district West Dinajpur, its constituent subdivisions and police stations:

- (i) Notification No. 548 GA, dated 23.2.48 forming district of West Dinajpur after partition consisting of the following police stations: (1) Balurghat, (2) Kumarganj, (3) Gangarampur, (4) Tapan, (5) Raiganj, (6) Hemtabad, (7) Banshihari, (8) Kushmandi, (9) Kaliaganj and (10) Itahar.
- (ii) Notification No. 1150 Pl, dated 8.5.48 regarding establishment of a new P.S. Hilli comprising J.L. Nos. 277 to 278, 281 to 290, 293, 320 to 357, parts of 358, 359 and 363, 364 to 369, 391 and 267.
- (iii) Notification No. 1342 GA, dated 8.5.48 regarding addition of P.S. Hilli in the district of West Dinappur as deplaced in Notification No. 1150 Pt, dated 8.5.48.

- (iv) Notification No. 2139 GA, dated 14.7.48 forming Raiganj Subdivision comprising P.S. (1) Raiganj, (2) Hemtabad, (3) Banshihari, (4) Kushmandi, (5) Kaliaganj and (6) Itahar.
- (v) Notification No. 1029 GA, dated 11.4.49. Declaration of Raiganj as the Headquarters of Raiganj Subdivision.

After 1947 but prior to 1956 a large tract of East Pakistan and Bihar intervened between the three northern districts of West Bengal siz., Darjeeling, Jalpaiguri and Cooch Behar on the north and district West Dinajpur to the south, as the Old Dinajpur District ceased to form the link between the two blocks having itself gone to East Pakistan by the partition of Bengal, 1947. A link was provided in 1956 when under the Bihar and West Bengal (Transfer of Territories) Act 1956 a strip of land was transferred to West Bengal from the Purnea District of Bihar. Relevant portions of Section 3 of the Act are reproduced below:

- "3(1) As from the appointed day, there should be added to the State of West Bengal the territories which on the 1st day of March, 1956, were comprised in—
- (a) that portion of Kishanganj sub-division of Purnea district which lies to the east of the boundary line demarcated in accordance with the provisions of Sub-Section (2) by an authority appointed in this behalf by the Central Government and that portion of Gopalpur Thana of the said district which lies to the east or north, as the case may be of the said boundary line and the said territories shall there-upon cease to form part of the State of Bihar.
- (2) The boundary line referred to in Sub-Section (1) shall be so demarcated as to be generally two hundred yards to the west of the highway in Purnea district connecting Dalkola, Kishanganj and Chopra with Siliguri in Darjeeling district and hundred yards to the south or south-west of the highway in Purnea district connecting Dalkola and Karandighi with Raiganj in West Dinajpur District:

Provided that the boundary line shall be so demarcated as not to cut across any village or town:

Provided further that from the point where the first-mentioned highway meets the southern boundary of Kishanganj Municipality to the point where it leaves the northern boundary of the municipality, the boundary line shall be the same as the boundary of the municipality on the east..."

Shri V. Viswanathan, I.C.S. was appointed by the Govt. of India to be the authority to demarcate the boundary line under clause (a) of Sub-Section (1) of Section 3 of the Act. His report published under Government of India, Ministry of Home Affairs Notification No. S.R.O. 2473, dated the 25th October, 1956 (Gazette of India, Extra Ordinary, Part II-Section 3 of the 25th October, 1956). This notification was subsequently amended by Notification No. S.O. 1728 dated the 11th July 1960 (Gazette

of India, Part II—Section 3 of the 16th July, 1960). According to this report, as modified by the amendment, the following area was transferred from the Purnea District of Bihar to West Bengal:

Si. Name of No. Revenue Thans	Name of Police Station	Number of village	Ares (in Sq. miles) as per Bihar records	Popula- tion (1951 Census)
1 Islampur	Thakurganj Chopra Islampur	12 124 120 }	336-40	{ 14,357 52,858 57,317
2 Kishanganj	Kishanganj Goalpokhar	286 94 }	246-79	{ 63,743 35,226
5 Gopalpur	Karandighi	270	149-69	47,165
	Total	906	732-86	270,666

Under the Sub-Section (3) of Section 3 of the Act, the territory specified in clause (a) of Sub-Section (1), (i.e., the territory transferred from the Purnea District) was to be included in and to form part of Darjeeling District of West Bengal. On 1st November, 1956, the day on which the transfer of territories came into effect, the Government of West Bengal issued a series of notifications to bring the gained territories into the fold of its existing administrative set-up. The notifications are listed below:

- (i) No. 3858 G.A. Refixing the jurisdiction of the existing district of Darjeeling so as to include within it the territory transferred from the Purnea District of Bihar.
- (ii) No. 3859 G.A. Forming a new police station under the name of Chopra Police Station comprising those portions of Thakurganj and Chopra Police Stations of the Purnea District of Bihar which were transferred to the Darjeeling District of West Bengal.
- (iii) No. 3860 G.A. Forming a new police station under the name of Islampur Police Station comprising that portion of Islampur Police Station of the Purnea District of Bihar which was transferred to the Darjeeling District of West Bengal.
- (iv) No. 3861 G.A. Forming a new police station under the name of Goalpokhar Police Station comprising the Goalpokhar Police Station and that portion of Kishangani Police Station of the Purnea District of Bihar which was transferred to the Darjeeling District of West Bengal.
- (v) No. 3862 G.A. Forming a new police station under the name of Karandighi Police Station comprising that portion of Karandighi Police Station of the Purnea District of Bihar which was transferred to the Darjeeling District of West Bengal.

(vi) No. 3863 G.A. Refixing the jurisdiction of the Siliguri Subdivision of the Darjeeling District so as to include within it the new police stations of Chopra, Islampur, Goslpokhar and Karandighi.

On the date following the date of issue of these notifications, i.e., on the 2nd November, 1956, the Government of West Bengal issued three more notifications transferring this territory from the district

of Darjeeling to the district of West Dinajpur. The notifications were:

(i) No. 3875 G.A. Including the new police stations of Chopes, Karandighi, Islampur and Goalpokhar in the district of West Dinajpur.

(ii) No. 3876 G.A. Refixing the jurisdiction of the Raiganj Subdivision of West Dinajpur District so as to include within it the new police stations of Chopra, Karandighi, Islampur and Goalpokhar.

(iii) No. 3877 G.A. Refixing the jurisdiction of the Siliguri Subdivision of the Darjeeling District so as to exclude from it the new police stations of Chopra, Karandighi, Islampur and Goalpokhar.

In the month of March 1959 another reshuffling took place in this part of the district. That portion of the transferred territory which lies to the north of the river Mahananda was again transferred to the Darjeeling District and accordingly the northern boundary of the district of West Dinajpur was refixed to be the river Mahananda. A subdivision named Islampur Subdivision was formed with the police stations Chopra, Karandighi, Islampur and Goalpokhar. The Government notifications issued on 20th March, 1959-are listed below:

(i) No. 1176 G.A. Redefining the limits of the districts of West Dinajpur and Darjeeling by transferring that portion of the Chopra Police Station which lies to the north of the river Mahananda from the West Dinajpur District to the Darjeeling District.

(ii) No. 1177 G.A. Redefining the limits of the Phansidewa Police Station of Darjeeling District and Chopra Police Station of West Dinajpur District by transferring that portion of the Chopra Police Station which lies to the north of the river Mahananda from the Chopra Police Station to the Phansidewa Police Station.

(iii) No. 1178 G.A. (a) Refixing the limits of Raiganj Subdivision of the West Dinajpur District so as to include only the police stations of Raiganj, Hemtabad, Kaliaganj, Itahar, Bangshihari and Kushmundi and (b) making a new subdivision styled as Islampur Subdivision of West Dinajpur comprising the police stations of Chopra (as reconstituted), Karandighi, Islampur and Goalpokhar.

Thus the district of West Dinajpur has now three subdivisions: Sadar or Balurghat, Raiganj and Islampur, with their headquarters at Balurghat, Raiganj and Islampur respectively. Sadar Subdivision comprises of the police stations Hilli, Balurghat, Kumargani, Tapan and Gangarampur. Raigani Subdivision consists of the police stations Bangshihari, Kushmundi, Kaliaganj, Hemtabad, Raiganj and Itahar; while the Islampur Subdivision extends to the police stations of Chopra, Karandighi, Islampur and Goalpokhar. By Notification Nos. 432 Pl and 433 Pl both dated the 5th Feb. 1964, the Goalpokhar Police Station was divided into two police stations, viz., Goalpokhar and Chakalia. Apart from the two municipal towns of Balurghat and Rayganj, four non-municipal areas siz., Hili, Islampur, Gangarampur and Kaliaganj were treated as urban for the 1961 Census. There is a total of 3,392 menger borne in the Jurisdiction List of which 3,130 are inhabited in 1961 Census and 249 uninhabited. 13 monear in full and parts of 2 mouzes are included in urban area.

PHYSIGAL ASPECTS

moral Description

The district lies between the parallels 25°10'55" and 26°35'15" north latitude and 87°48'37" and 26°0'30" east longitude. The district is of irregular shape lobking very much like the blade of a scythe. It chief town Balurghat is situated almost at the south-east corner of the district on the left bank of the Atrai river in 25°13' north latitude and 88°47' east longitude. One has to cross a distance of about 135 miles by road if one has to reach Islampur a Subdivisional headquarters from Balurghat. Hill is another town of the district situated on the south-eastern border of the district. It takes one to traverse a distance of about 153 miles to reach Islampur from Hili. The greatest breadth of the district from east to west at its southern portion is approximately 50 miles and its shortest breadth east-west at its northern part is about 8 miles.

The area of the district according to the Surveyor General, India is 2,052 square miles. Area figures according to the State Survey Department are not available because revisional survey operations and the consequent revision of the Jurisdiction Lists have not yet been finalised. According to computations made in the Census Office from last published Jurisdiction Lists and from village level records of the transferred territories obtained from the Bihar Census Office the total area of the district was 2,061-9 square miles. The population of the district in 1961 was 1,323,797. With 6.03 per cent of the area of

the State this district accounts for only 3.79 per cent of its population. The district ranks 8th in terms of area and 15th in terms of population amongst the districts of West Bengal including Calcutta. The figures given below show the position of the district in the State.

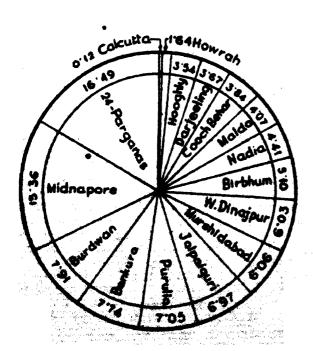

The district is bounded on the north-west by the district Darjeeling, on the north and north-east by the Dinajpur and Rangpur Districts of East Pakistan on the south and south-east by the Rajsahi and Bagura Districts of East Pakistan, on the south-west by the district of Malda and on the west by the Purnea District of Bihar. The river Mahananda forms its northern boundary. This river also forms a portion of the boundary on the south-west between Malda and West Dinajpur.

River System

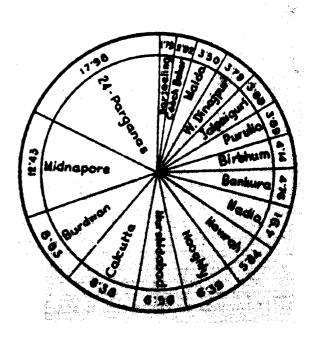

The district appears generally to be flat, but has a general slope from north to south. This is evident from the course of the rivers flowing through West Dinajpur. The general direction of the main rivers is from north to south. The height of Hill town is only 84 feet above the sea level. The ultimate destination of all the main rivers is the Ganges. The beds of the rivers are as a general rule well below the level of the country. Profuse rains only in exceptionally wet years can make the river waters overflow their banks, thus causing flood. The channels of the rivers are well marked and are almost constant.

PERCENTAGE OF POPULATION

Of course, there is evidence to show that in the past sometimes the course of the main rivers underwent some changes. In the rainy season the main rivers are navigable by country boats well into the district but in the dry season or during the greater part of the year they are either dry or dwindle to a string of pools and as such at a few points they are navigable and most of them are fordable almost throughout their course through the district. The rivers and streams of West Dinajpur are, therefore, of little use for the purpose of communication during the greater part of the year. There is good reason to suppose that the river beds are getting shallow through deposition of silt.

The main rivers of the district are the Nagar, Punarbhaba, Mahananda, Tangan and Atrai. Rennell's map (1779-81) shows the present Atrai and Punarbhaba rivers as the Teesta. It has been shown there that these two rivers used to carry the water which now flows down the Teesta. By Buchanan Hamilton's time (1808) the present Jamuneswari and Karatoya rivers became the channel for the flow

of much of the water of Teesta.

The following is a brief account of the main rivers flowing through the district of West Dinajpur. The Nagar rises at a place north of Atwari where the Chopra Police Station of Islampur Subdivision and the Jalpaiguri District and that part of Old Dinajpur District which is now in Bast Pakistan meet together. The Nagar traverses a long way towards south and joins the Mahananda at village Jayhat (J.L. 233)

in police station Itahar at the south-western corner of the district. During its course it almost follows the boundary line between the Raiganj and Islampur Subdivisions. The Mahananda joins the Nagar river at Mukundapur in police station Itahar which is very near the trijunction of the districts Malda, West Dinajpur and Purnea. The Mahananda forms the boundary between the districts Malda and West Dinajpur upto the village Tharais (J.L. 225) of police station Itahar flowing in the south-west direction and again forms the boundary between two districts at Jayhat and Aminhat from which point it passes into Malda District. In the upper reaches the bed of the river Nagar is rugged but its channel in the lower portion is deeper than that of many other rivers of the district. Just before joining the river Mahananda, the Nagar throws out a side branch called Sui river pear the village Damdalia. The Sui following a winding path almost flowing parallel to the Mahananda again joins the latter about 18 miles lower down. A small river the Nona takes its rise in the bill area of Barodhara and meets with Nagar at Paikpara in police station Raiganj. Kulik is the principal tributary of the Nagar. It rises in a marsh about six miles west of Thakurgaon in East Bengal and falls into the Nagar at the south-western junction of the Raigani and Itahar Police Stations. The Gomar, a small stream coming down from Pirganj of East Bengal meets Kulik at Kastray (J.L. 46) of Hemtabad Police Station.

The Chhiramati is another river flowing through Kalinganj, Kushmundi, Itahar and Bengshihari Police Stations and ultimately goes down to Malda crossing about 20 miles through West Dinajpur . District. This river is of little importance excepting that the village Patirajpur a noted market place is situated on its right bank. The river Tangan enters the district through the Kaliaganj Police Station from East Bengal and after passing thorough this Thana turns out through Kushmundi and Bangshihari and enters into Malda District to join the river Mahananda at Aiho. Radhikapur, an important trade centre and another important market place Sihol are situated on its banks. During the rainy season this river is fairly navigable as far as Radhikapur in police station Kaliaganj. The river bed is sandy in its upper reaches. The principal tributary of the Tangan is a small spring the Baliakhari by name.

The river Punarbhaba rising in Thakurgaon of East Bengal enters the district in northern extremity of Gangarampur Thana at mana Mullickpur (J.L. 5). It passes west of Thana headquaters of Gangarampur. On entering the district the Punarbhaba throws out a distributory called the Kasinai Khal which again joins the Punabhaba at north of Kasimpur. About 3 miles north of Gangarampur the Punarbhaba sends out another branch in south-westerly direction called the Brahmani river which after a course of about 18 miles rejoins the parent stream in Malda District. This river Punarbhaba is navigable during the rainy season. The important places of its banks are

Bangarh, Narayanpur and Kardaha.

The Atrai enters the district in police station Kumarganj at Kamdebpur (J.L. 9), but before that it touched the district at Samjia (J.L. 20). Passing through the Kumarganj Police Station the river enters Balurghat and continues to its southernly course and ultimately passes out of the district into Rajshahi of East Bengal at Chakbhatsala. The district town Balurghat is situated on its left bank. Before the Partition of Bengal it was the most important river in the district, as a good deal of trade used to be carried out through this stream. But the river being bottled up at two ends by the East Bengal. its importance has diminished to a considerable extent. Some important grain marts viz., Samjia, Patiram, Kumarganj and Balurghat are situated on its banks. The Ghuksikhari sometimes called the Ichhamati is another stream passing through Balurghat and running parallel to the river Atrai. The Ghara is another river passing through Balurghat. The Jamuna flows about 3.5 miles in the district entering the eastern most corner of the district at Agra (J.L. 356) of Hilli Police Station and leaves the district at Ujar (J.L. 364). The town of Hili is kept on its left bank. It is a good navigable river, the channel having a fair depth. The Berang, Douk, Dalaucha, Sarino, Pitano, Sudhano and Balhakuar are the main rivers flowing through the Islampur Subdivision of the district.

Goology

The geology of the district is exceptionally uninteresting. Almost the entire area comprises of

alluvial deposits of recent formation. The sprincipally is of the Khiyer variety, which is to suitable for vegitation due to its being hard a impenetrable in dry weather. With rainfall to variety of the soil becomes soft sticky loam. So the pali variety is also found in some areas of to district. In north-eastern portion of the district to pali type of the soil is generally found. This light ash-coloured sandy loam and due to its his retentivity of moisture it is capable of product double crops. Chera or Balia is also observe especially on both sides of some of the larger rivelike Atrai. The Bariad makes its appearance the southern portion of the district. Geologicall this is classed as old alluvium.

Climate and Rainfall

The district of West Dinajpur lies just outsit the tropics and its climate approximates more th of Bihar than that of the central districts of We Bengal. The climate is characterised by hot summe profuse rains, humid atmosphere all through the yea. The hot weather begins with strong westerly wind practically from the month of March and continue till the middle of June. The days begin to be he in a normal year from the middle of February be night remains cool till the middle of April. Th mean maximum daily temperature in April-Ma is of the order of 37°C (97°F). The weather is oppre sively hot in these months due to high moistur contents in the air. The west is the prevailing win till about the mid-April when nor westers set ir sometimes with great fury. In May there are stron winds from the west, hot and interrupted by squall generally accompanied by thunder-storms, rain and often by hails of great magnitude. This is popularly known as Kalbaishakhi in the district. In the ho season the air is extremely dry and far from enervating This period i.e., from February to May is said to be the healthy season in the district.

Monsoon generally sets in the middle of June when the rainy season commences. The heavies rain usually falls in July and August and sometimes even as early as the middle of June. Average annua rainfall in the district is 1,634-8 mm (64-36"). The rainfall increases from the south-west direction to the north-west. 78 per cent of the total rainfall covers the period from June to September. On an average the district experiences 69 rainy days (days with 2.5 mm—10 cents or more). Of course, it varies from 61 days at Raiganj to 76 days at Balurghat. There are visitations of flood generally twice in the season. With the setting of the monsoon the climate changes. It becomes damp and unhealthy. The heat is tempered by easterly winds which spring up towards sunset and lower the temperature during the night.

As the monson withdraws in October, day and night temperatures decreases steadily. From the middle of October the night becomes appreciably cooler though the day remains hot sometime longer. The cold weather may be said to be actually setting in early in November and continues upto the end of February. January is the coldest month. In the

cold season on account of passage of east-winds of western disturbances across northern India, the district experiences unusually cold spell though for short periods. During the cold spell the minimum temperature may go down to 4° or 5°C. In general, the cold weather in West Dinajpur is one of the most agreeable climates in the State. Days are bright and

sunny and the air crisp and clear. During the cold sesson the district experiences a very little enimiality with the exception of light showers towards the end of December and a chunder shower or two in February. Occasional appearance of fog is also experienced in winter.

HISTORY

The early history of West Dinajpur has been ably described in the history of Bengal edited by Dr. R. C. Majumdar and Sir Jadunath Sarkar. The district had a glorious past. The district is very rich in archaeological remains which still carry the imprints of the past. Tradition says that the Pandovas moved to this part of the country and on their journey towards north they kept their weapons inside the trunk of a big tree in a village named Panchbhaya and killed the demons in the villages Asuragar and Vimbhar. Karandighi was named after the name of king Karna. During the Mouryya period, Gupta Age and during the rule of the Pala kings and even during the muslim rule the district flourished very much. Anecdotes still refer to various historical incidents that occurred in this part of the country during the above periods. There are even references of the spread of Jainism and Buddhism in the district.

The glossary of the better known ancient monuments in the West Dinajpur District is reproduced below from the District Census Handbook of West

Dinajpur (1951) by Shri A. Mitra, I.C.S.

A. Sadar Subdivision

1 P. S. Kumarganj

About 14 miles north of Balurghat on the Balurghat-Kumarganj Road at Biswanathpur (J.L. 146). A group of old dilapidated temples of the Pancharatna and Nabaratna types with carved terracotta decoration. Also a dolmancha. Also traces of an old mud fort at Khorda Mohana (J.L. 119) immediately to the north of Biswanathpur (J.L. 146).

2 P. S. Tapan (J.L. 63, Tapan—J.L. 64 Kasba). About 14 miles west of Balurghat on the Balurghat-

Tapan Road.

A very fine tank, named Tapandighi, perhaps the largest in the district; for the water seems to have extended 4100 feet from North to South and 1150 from East to West, and the space occupied by the tank is about 300 feet wide, making the total dimensions 4700 feet by 1750. On the east and west sides have been three entrances through the bank, each had a descent to the water (Ghat) lined with brick. On the south side have been two entrances and on the north side one; opposite to this is a small heap, probably the ruins of a temple. About half a mile to the west of the Tapandighi is a space of about half a mile in extent called Patharpunji (J.L. 68 Kazibhag), broken with small tanks, like the situation of a town; and near the northern extremity of this is a large heap of bricks, covered with soil once probably a temple of considerable size. Beautifully ornamented and

carved terracotta tiles can still be salvaged with a little endeavour and several beautiful specimens can be seen at the library of the Prachya Bharati at Balurghat. These tanks are said to have been made by Ban raja, and to have been the place where he performed his religious ceremonies (tarpan) and where he swung before Siva for 1000 years, suspended by hooks passing through the skin of his back.

(a) Daudpur (J.L. 70) on the Tapan-Kardaha road, about 21 miles west of Tapandighi. Remains

of an old arched bridge can be seen.

(b) Kardaha (J.L. 30) about 6 miles west of Tapan—near the Punarbhaba river. Celebrated as having been the place where Krishna burned the 998 arms of Ban raja, which he had cut off in battle. Contains an 18th century brick temple of the Dinajpur Raj.

- (c) Manahali (J.L. 50). About 3 miles north-east of Kardaha. Celebrated as the area where the famous Manahali plate inscription was discovered.
- (d) Bhikhahar (J.L. 184). About 21 to 3 miles south of Kardaha. Ruins of a very ancient group of brick temples with teracotta bricks containing figures of animals, birds etc. The writer has made a gift of several remarkable specimens to the Asutosh Museum where they may be seen.
- (e) Bhaior (J.L. 188). About 1½ miles south-west of Bhikhahar. The torso and head of an enormous Sandstone Dasabhuja Durga on a raised mound. This is a remarkably large image.
- (f) Dwipkhanda (J.L. 140). About 1 miles east of Tapan. The entire mauza is studded with high mounds and ridges suggestive of buried ruins.

3 P. S. Gangarampur

About 20 miles from Balurghat on the Balurghat-Kaliaganj road. A full description of the ruins is given below from Francis Buchanan Hamilton's account. The mauzas are:

(a) J.L. 84 Rajibpur for Bangarh or Bannogor

(b) J.L. 86 Puranpara for Dhaldighi

(c) J.L. 94 Ramchandrapur and J.L. 97 Raghunathbati for Kaladighi

(d) J.L. 36 Narayanpur and J.L. 82 Kalighat for Damdamma

All are within a radius of 14 miles of Gangarampur

thana.

"The proper name of Dumdummah is Devi Kot. It received its present appellation (which signifies the place of war) from its having been a military station during the early Muhammedan government, as it probably was then on the frontier; for I have already mentioned, that the province called Barendo

extended no farther north than this place. While the troops were stationed at Dumdummah, the chief officer, under the title of Wazir, seems to have resided on the banks of a very poble tank, which is named Dahal Dighi, and has evidently been formed by Muhammedans: its water being about 4000 feet from E. to W. and 1000 from N. to S. It is probably exceedingly deep, as the banks thrown out are very large. They have been a good deal spread, and from many irregular rising grounds, finely planted; and surpass in beauty any thing of the kind that I have ever seen. On many different parts, especially towards the N.E. corner are heaps of bricks, probably the ruins of the houses that were occupied by the Moslem officers. On the centre of the north side is the monument (Durgek) of a saint (Pir) named Mullah Ata-ud-din, contiguous to which is a small mosque. Both are very ruinous, but a canopy is still suspended over the tomb, which is much frequented as a place of worship and the fakir has an endowment of 200 biggahs (about 100 acres) of land. The present occupant is a remarkably handsome man, and has a perfect formed arabian countenance, although his ancestors have held the appointment for several generations. A descent, paved with stone, leads down from these buildings to the tank, and the materials have been evidently taken from a ruin, as broken columns, parts of doors, windows, and stone variously carved, are intermixed with such as are quite plain. Traces of the human form on the pedestal of a columb shew that the ruins from whence they were taken have been those of a Hindu building, and confirm the tradition of the supply having come from Bannogor. The wazir, who is reported to have founded the mosque and to have dug the tank, is said to be buried between them, and a large cavity covered by long stones is shown as his grave. From an inscription over the gate of the mosque, it appears, that it was built before the time of Ata-ud-din, and of Shekh Mukbu (another saint), by Wazir Shair Musaur of Mozofurabad, Commander of the troops of Firuzabad, in the reign of Hoseyn Shah, Sultan of Hostina, son of Mosofur Shah, A.H. 718. From an inscription under the former, it would appear, that a place for prayer (Gombuz), which has been erected behind the tomb, was built by the order of Sekandar Shah, son of Majahud Shah, son of Ayas Shah, A.H. 765. Also from an inscription in a wing of the mosque, it would appear, that this was erected as a place of prayer of Ata-ud-din by Futch Shah, son of Mahmud Shah, A.H. 854. A part of the mosque, called Hemada, from an inscription in it, was built in the reign of Kykaos Shah, by the order of Sakandar Sani, or the 2nd, A.H. 872. Finally, from an inscription over the door of an apartment to the right of the mosque, and which was a kitchen for the use of fakirs, it would appear, that it was built in the time of Mukhdum Mullah, when Mozofur Shah was king. The date is no longer legible. At a little distance east from Dahal Dighi is another tank of very large dimensions, called Kala Dighi and supposed to have been dug by Kala rani, the spouse of Ban raja, exclusive of the banks it is about 4000 feet long from N. to S. by 800 feet wide.

"North from the tanks called Dahal and Kala are

many small ones, which formerly in all probabil were in the suburbs of Banzoner, the res

"The ruins of Banneger occupy the east bank the Punabhoba, which here runs from N.E. to 8.1 for about two miles, beginning a little above Du dummah. I first examined the citadel, which is quadrangle of about 1800 by 1500 feet, surround by a high rampart of bricks, and on the south as east by a ditch: the remainder of the ditch has be obliterated or destroyed by the Punabhoba, which the time of Ban raja is said to have passed to t north of the present course of the Brohmani; as many large water-course, which are to be seen in th direction, render the tradition probable. On the west face of the citadel is a large projecting par probably the outworks before the gate. In the cent is a large heap of bricks said to have been the rais house; and on the east face is a gate and a causewa about 200 feet long, leading across the ditch into the city, which has been a square of above a mile i diameter, and has been also surrounded by a rampa of brick, and by a ditch. Towards its S.E. corner the monument of Sultan Shah, which is ruinous; be a fakir has a small endowment, and burns a lam before the tomb. The monument is much frequents by the faithful, and contains many stones, whic from their position have evidently been taken from ruins, and pillars are of the same order with those a the mosque of Dahal Dighi. They are somewhs more elegant than those at Adinah, and I hav procured a drawing of one (No. 9), and of a doc (No. 10), which, I have no doubt, belonged t Bannogor.

"Near the monument of the Muhammedan sain are the two celebrated pools Omrito and Jivot, which I mentioned in my account of Ban raja. In their present state they are very different from the pools a life and immortality, which their names imply, a they are filled with abominably dirty water. have never been large but the size of the heaps of bricks round them shown that they have been surrounded by large buildings; and probably they have been sacred ponds (Pushkorinis), which occupier the areas of two temples. The women of the vicinity who have been unfortunate in their children, and have lost many by death, frequent these pools, and carrying with them two living fish of the kind called Kamach Singgi, bathe in each pond, and make an offering of a dish.

"In Omrito a projecting stone was pointed out as the dead cow that had been thrown into the water by the infidel Yovons, in order to deprive it of in virtues. I proposed to take it out, which excited a smile of contempt in my guides, who sesured me, that one of the Dinajpur rajas had tied ropes to it, and with three elephants had attempted in vain to procure this monument of antiquity. The pandit attached to the survey, who is perhaps somewhat of a philosopher, went next day with a dozen men and some ropes, and pulled it out with some degree of exultat He found it to be an image of the bull Vrisho, which is usually worshipped by the sect of Shiva, and which the infidels very probably threw into the pond. This and the image of Gones now at Dinajpur, which I

have stready mentioned, together with the custom of swinging attributed to Ban raja, pretty clearly show the religion of that tyrant (Oser) who opposed Krishno, as the temples of Shiva constructed by Ravon, which I have seen in the south of India, point can the worship of the emponent of Ram.

"At the N.W. corner of the ruins of the town, near the Punshhoba, are the remains of the monument of another Muhammedan saint, Pir Havakhari, which also have some columns, and other stones: and the same fakir who lights the lamp at the tomb of Sultan Shah attends on this, which is also much frequented by the devout.

"Near this the river has undermined part of the ruins, and is encroaching on a thick bed of bricks, in which stands a column of granite of the same order with those in the monuments of the Muhammedan saints.

"At a very little distance from the N.E. corner of the city is a large heap of bricks, said to be the ruins of a temple dedicated to Virupakhyo (Shiva) by Ban raja. In the time of Raja Ramnath of Dinajpur, two religious men were informed in a dream where the image was concealed, and hastened to inform the raja of their discovery. He accordingly sent people with the two good men, who pointed out the place in the ruins, and on digging there was found a Linga, for which the raja built a small temple, and settled 360 biggahs (about 180 acres) of land, with a monthly pension of 30 rupees on the two brahmuns, whose children now enjoy the fruits of their ancestors' virtue. It is said and believed in the neighbourhood that this image, when discovered, was a cubit high. It has since gradually diminished, and is now reduced to a span. The new temple is very ruinous, and the brahmuns who have the endowment will probably wait for a repair, until another dreamer can procure another raja, who will perform that work of piety. It is now, however, the chief place of Hindu worship in the division.

"About half a mile west from the north end of the city, on the opposite side of the Punabhoba, is a considerable heap of bricks, overgrown with bushes, and placed on the side of a small tank. For any thing that appears to the contrary, this, as is related, may have been the house of the princess Usha, whose fondness for Oniruddho brought about the destruction of her father and native city.

"About three-fourths of a mile beyond this heap, and on the other side of the Brohmani, is a place called Narayonpur, where there are many small tanks and heaps of bricks like an old town. This is said to have been the field where the great battle took place between Krishno and Ban raja. Near one of the tanks, evidently of Hindu construction, is the monument of a Muhammedan saint, Pir Baha-ud-din, from whence to the tank is a large pavement and stair, constructed of stones, that have evidently been taken from rules. Near it is a small building of brick, much ornamented with carving, and which from its resemblance to the mausoleum of Ghyas-ud-din, at Pernya, probably contains the tomb of some person of rank.

"The great number of stones in these ruins, and a vast many that have been removed by the Dinajpur

rajas, to construct their works, show that Bannagor has been a place much ornamented and its walls show that it was of considerable size and strength. The people here allege, that all the stones which are to be found in the buildings of this district have been carried from it, and that Gaur owed its most valuable materials to the ruins of Ban raja's edifices."

B. Raiganj Subdivision

1 P. S. Bansikari

At Bansihari on the bank of the Tangan a large heap of very beautifully carved stones was still to be seen in 1951 which from their appearance suggested that they had been brought over from Pandua in Malda district.

The ruins in the police station are thus described by Buchanan Hamilton. The mauzas are:

(a) Bansihari-J.L. 259 Sibpur.

(b) Gopalpur—J.L. 123. About 5 miles north of Malam which is at mile 28 on the Balurghat-Bansihari-Malda road.

There is an old mosque at Gopalpur a little off the road.

- (c) Maliandighi—J.L. 112. About 3 miles west of Gopalpur.
- (d) Gourdighi—J.L. 106 Khayerbari.
 (e) Altadighi—J.L. 4 Chenti Mahespur.
 About 1½ miles south-west of Maliandighi.

The Malam-Gopalpur road appears to be a very ancient road paved with old brick, and there are the remnants of an old arched bridge. Ekdala Bahirhata is just outside the jurisdiction of Bansihari.

"DIVISION OF BANSIHARI

"In this division there is no place of worship of any note, but there are several antiquities near the thana, at about half a mile south from this place is a small Hindu temple, called a mondir, a work apparently of considerable antiquity. Its base is a quadrangular prism, about 20 feet high, and 12 wide. Its summit is a pyramid of about the same height. This part of the building has been much ornamented with carved bricks, especially a kind of escutcheon on each face, that possesses some degree of good taste. The artists have been ignorant of the method of constructing an arch; for the door is contracted above, to a point, by the horizontal rows of bricks gradually encroaching on its width; not the smallest tradition remains concerning its founder, and the image has been removed.

"At a little distance west from this mondir begins a narrow elevated ridge of land, perhaps half a mile wide, which extends west to the Beliya about two miles, and seems to me entirely artificial. It is every where full of small tanks, inequalities, and heaps, many of which consist almost entirely of bircks. The largest of these has been lately opened, probably in part to look for hidden treasure, and in part to procure bricks for building an office (huckey), for collecting the rents, and this latter view has not been in vain. The building has probably been a temple, in form of a polygon. The outer wall is about four feet thick. At the western end of this elevated space

are two tanks of considerable dimensions, which are almost filled up, end entirely choked with weeds. The place is called Brojobollobhopur, and I have no doubt has been a considerable town; but no tradition remains.

"About 11 mile west from the Beliya, is a very large tank, called Melandighi, which is nearly choked with weeds. The only tradition concerning it is, that it was dug by a princess (Rani), and that a miracle was necessary to procure water. About 11 mile further west is Gordighi, a tank, the water of which was extended about 600 yards N. and S. and 400 yards E. and W., and which of course is a Hindu work. A considerable portion of it has now so far filled up, that it is cultivated for rice. About 1,200 yards west from this tank is another, called Altadighi, which extends nearly to the same dimensions, but is placed with its greatest length from east to west, and therefore is a Muhammedan work. Between these two tanks are the ruins of Borohata, (Bairhata. J. L. 5) which are very large heaps or mounds, that consist in a great measure of bricks. In many places the foundations of walls may be traced, and even the dimensions of the chambers. All these chambers are of a small size, owing to which they may have resisted the attacks of time better than more spacious apartments. They are chiefly situated in the southern division of the town called Kutwari. In this part are some small tanks that have evidently been entirely lined with brick. In the centre of the ruins are indubitable traces of a small square fort, which has been surrounded by a double wall of brick, and an intermediate ditch. The ruin to the north of this fort is almost entirely without the trace of regular form, but the quantity of bricks which it contains is great. At its northern extremity is the monument of a Muhammedan Pir, Badul Dewan, which is built of brick; in its gate are two stones, but there is nothing about them to determine, whether they have been brought by the founders, or taken from the ruins. There is no sort of tradition concerning the persons who either founded or destroyed these works.

"I observed also in this division, on the road towards the S.E., two places where there were small tanks. and heaps of earth and bricks, which may have been towns; but there was nothing about them which indicated their ever having been places of consider-

able importance."

2 P. S. Kushmandi

- (a) Mahipaldighi (J.L. 190). About 10 miles north-east of Bansihari on the Bansihari-Dinajpur Road. A description of Mahipaldighi is quoted below from Buchanan Hamilton. There are traces of an old indigo factory where William Carey first settled down to work.
- (b) Panchanagar (J.L. 217). About 2 miles south-east of Mahipaldighi. Site of an ancient Hindu city.
- (c) Ekdala Bahirhata (J.L. 39). This mauza is near the extreme south-western corner of the thens.

Francis Buchanan Hamilton records the follow "In the N. E. part of this division is a very tank, supposed to have been dug by Mohipal raja called after his name (Moybuldighi R.). The of water extends 3800 feet from N. to S., and from E. to W. Its depth must be very consider as the banks are very large. On the bank are se small places of worship, both Hindu and Mo but none of any consequence; nothing remain show that Mohipal ever resided either at the or at Mohipur, near it; but there is a vast numb bricks, and some stones, that probably belonge religious buildings, that have been erected by persons who constructed the tank. One of the st is evidently the lintel of a door, and of the same with those at Bannagor, and may have been bro from the ruins of that city. The people in the m bourhood have an idea, that there has been a buil in the centre of the tank; but this is probably de of truth, as there is no end to the idle stories w they relate concerning the tank and Mohipal. are considered as venerable, or rather awful, and raja is frequently invoked in times of danger. canal and road, formed from the earth, thrown leads south from the tank, about four miles, w they join others leading east and west, but to w distance I did not ascertain."

3 P. S. Kaliagani

An east-west high ridge starts west of Kushma towards Kaliaganj called the Ushaharan R supposed to be the road taken by Aniruddha w he cloped with Usha the daughter of Ban raja. Tri of a long ridge can be identified right across Ks ganj and Itahar to Churaman. It is possible t Buchanan Hamilton was exploring somewhere n this ridge when describing the ruins of Borogans Kaliyaganj Division as follows:

"Division of Kaliyagunj

"The only remains of antiquity that I saw or he of it at Borogang, in the southern part of the divisi These are several mounds, consisting of bric covered in a measure with soil, and extending ab 30 yards in diameter. Near them are many sm tanks, like those of a Bengal town. On one of mounds is situated the tomb of a Muhammed saint, surrounded by a brick wall. The fakir sa that it was built by one of the Bengal kings, which very probable; but his authority is as nothing, for was a poor illiterate creature, with a silly show devotion. Even while I was speaking to him, continued to mutter prayers and to sob forth pic ejaculations. Around the monument (durgah) s a good many stones, like those at Hemtabad, but k ornamented. There is no tradition concerning t founder of the ruin. I have no doubt of its havi been a Hindu edifice, and that the monument h been built from its materials."

4 P. S. Hemtabad

The following account of Bunchanan Hamilt still holds good. The mausas concerned are:
(a) Hemtabad (J.L. 81), on the Kalingas

Raiganj road.

(5) Kantor (J.L. 82). (c) Sombanda (J.L. 80).

(#) Kasha Mahaso (J.L. 176 P.S. Raiganj).

"Division of Heatabad

"By far the most celebrated Muhammedan place of worship, either here or in the vicinity, is near Hemtabad, and is a (Durghs) monument, dedicated to Mukhdum Dolsorposh, where the saint's tomb is shown, and where there is a small rude mosque of stone, adorned with pillars and carvings, which, it is evident from their containing human figures, have been taken from Hindu buildings. In the marketplace at Hemtabad, the same saint has a monument, which is much frequented on the day appropriated for the commemoration of his name; and near his own mosque, which was adjacent to his house, he seems to have erected another in memory of Kotub Shah, who was the most holy personage in the reign of Ghyas-uddin, as Dokorposh seems to have been in the reign of Sultan Hoseyn. The mosque of Kotub Shah has also been ornamented with stone pillars, the spoil of infidels. Four fakirs attend the mosque of Dokorposh, which is in tolerable repair, as well as the tomb, but the other buildings are quite ruinous. They have 500 bighas of land, free of rent, but it is of a wretched soil. This mosque, from an inscription over the gate, would appear to have been built in the year of the Hegira 996, by Sultan Hoseyn.

"At Baliyadighi is a mosque near a tank, which has an endowment of 1000 bighas of land; and the fakir. who has the hereditary charge, lives in a brick house, and in a decent manner. There is no Hindu place

of worship of any note.

"The antiquities of this district are rather interesting and are situated immediately west from Hemtabad. It is said that formerly there governed at this place, a Hindu raja, named Mohes, to whom much of the neighbouring country was subject. During his government, a certain Muhammedan saint (Pir), named Buzerudin, came and sat down at his gate, where he seems to have been but coldly received. Soon after, came a still more celebrated person, Mukhdum Ghuribal Hoseyn Dokorposh, and the raja immediately fled to Dhaka, which he is said to have founded. The Pir, I should suppose, was accompanied by an army, but tradition by no means supports this conjecture. On the contrary, it is said, that the raja fled merely because he was shocked at the destruction which the two barbarian saints and their attendants comitted on innocent cattle and poultry; Mohes, therefore, was probably very different from the Hindu rajas of the present day, as indeed all rajes of former times are said to have been. A Muhammedan saint, in these days, who attempted to kill a cow in a Hindu country, would run great risk, unless he was protected by an army. In support of my opinion, I must mention, that soon after Mohes had been expelled by the saints, Sultan Hoseyn appears to have been at the place, and gave his daughter in marriage to Mukhdum-usi-uddin, brother to Dokorposh. The son by this marriage, Mukhdum Shah Bazit, is said to have retired to

Sondwip, and took up his abode there; but his son . Jamaludin returned here, and was buried near his grand uncle. In the inscription on his tomb, it must be observed, that he is called Jamahadia; son of Sheykh Yahia. On the whole I am inclined to believe, that Mohes raja was sovereign of this part of the country, which, not being included in the pro-vinces of Barondro or Maithilo, did not probably belong to the kingdom of Gaur, until the time of Hoseyn the conqueror; and this territory may have been the country called Kamacah, which he added to his dominions. Having premised so much on the history of the place, I shall now describe its present

appearance.

'Near a tank, a little way west from Hemtabad, there is a space of ground about half a mile in diameter, over every part of which bricks are thickly scattered, and in some places the foundations of walls may be traced. In some places, this is thickly covered with trees and bushes, and in others, it is clear; at the northern end is a small hill, formed of bricks, and said to have been the public office (Kuchery) of Mohes raja. On the surface are a good many large squared stones of which material, probably, a considerable part of the building consisted. South from that, about 100 yards, is a still larger heap of ruins, and here also are several stones, one of which, apparently the lintel of a door, is a good deal ornamented. This ruin is said to have been the raja's house. Immediately south from this heap are shown the foundations of a small square apartment, made of brick, in the centre of which is a tomb, said to be that of Pir Buzerudin. The door of stone is still erect, and as will appear from the drawing, has been handsome. From the figures on it, the workmanship is, no doubt, Hindu, and in all probability, it has been a door in the raja's house; at the south end of the ruins are the mosques and adjacent buildings, which I have no doubt, have also been built from the materials of the raja's abode. A door in the outer wall has still more perfect figures, than that which has been drawn; and the figure on the lintel strongly resembles the image of Gautama and his two favourite disciples, as usually represented in the temples of Ava. The pillars are remarkably clumsy, quite in the Hindu style; and being all of different forms and lengths, could not have been originally intended for the places which they now occupy. Besides, on a stone lying near the mosque is carved a human figure, quite entire. I have given a drawing of this building, as being one of the most entire in the district.

"About a mile and a half beyond this ruin is another, which has been surrounded by a brick wall, and is usually called the Tukht or throne of Hoseyn (Padshak) the king. The tutht consists of a quadrangular truncated pyramid, of about 20 feet in perpendicular height, and is composed of bricks heaped confusedly together. Intermixed with these are some large carved stones, evidently of the same style as those of Mohes raja's house; but whether they have been brought from thence, or whether they are the ruins of a temple, that formerly may have been on the spot, I cannot say. On the summit of this pyramid is a considerable square area, in the centre

of which a terrace has been raised about three foet high; and this has been regularly built with cement, and its sides have been ornamented with mouldings covered with plaster. It was here, it is said, that Hoseyn Shah sat, and beheld sports which were exhibited at the nuptials of his daughter. South from the pyramid are the ruins of a brick building, the roof of which has fallen in, but the walls are standing, and have been encrusted with carved bricks. The building is nearly square, with arched doors and windows, and is elevated on a brick terrace about five feet high. This is said to have been the house that was erected for the accommodation of the princess during the ceremony, after which the whole seems to have been given to religious men. The

tombs of two saints (Weleat and Bahader Sh now occupy the throne of the king, and many to of saints and fakirs surround the pyramid. Then small endowment of land for supporting the fakir supplies the lamps burned at the tombs of the distinguished of these personages.

"Between the two ruins many bricks are scatt on the fields, and a very wide road, with a ditcl each side, may be traced most part of the way."

5 P. S. Itahar

l Churaman (J.L. 164). The ancient por Chudaman said to be still unidentified by Dr. R Majumdar in Vol. I of History of Bengal.

THE PEOPLE

Population

Table A-I in Part II A gives the population figures of the district, three subdivisions and each police station separately for the Total, Rural and Urban sectors. The following statement shows the growth of population in West Dinajpur District since 1901:

	Year 1	Population 2	Decade Variation 3	Percentage Decade Variation 4
Total	. 1901	741,284		
1 - 1	1911	791,512	+ 50,228	+ 6.78
	1921	695,536	- 95,976	- 12.13
	1931	745,821	+ 50,285	+ 7.23
	1941	834,726	+ 88,905	+ 11.92
	1951	976,882	+ 142,156	+ 17-03
	1961	1,323,797	+346,915	+ 35.51
Ruial	. 1901	741,284		
	1911	791,512	+ 50,228	+ 6.78
	1921	695,5 3 6	- 95,976	- 12-13
	1931	745,821	+ 50,285	+ 7⋅23
	1941	827,774	+ 81,953	+ 10.99
	1951	934,942	+107,168	+ 12.95
	1961	1,224,828	+289,886	+ 31-01
Urban*	. 1901	••		
	1911			
	1921	• •		
	1931			
	1941	6,952		
	1951	41,940	+ 34,988	+ 503-28
	1961	98,969	+ 57,029	+135-98

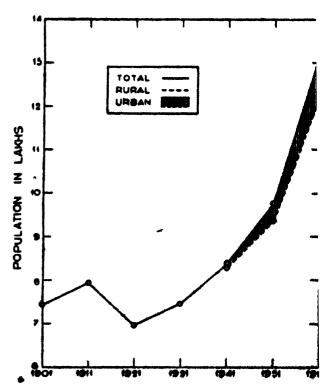

The diagram given here shows the Total, Rural and Urban population of the district for the last seven Censuses.

In comparison with the State of West Bengal the district has shown a lower growth rate for the periods 1901-61, 1901-21 and 1921-61. But in the last decade the growth rate of West Dinajpur exceeded

that of the State as a whole. This is evident from following statement:

			Percentage Incre	me or Docre
			West Dinajpur	West Ben
1901-61		,	-+ 78·58	+106-1
1901-21			- 6.17	+ 3.1.
1921-61		•	+90.33	+ 99-8
1951-61	•	•	+ 35-51	+ 32.0

POPULATION 1901-1961

The district registered a decrease of only 6-17 recent on 1901 population in first 20 years of the prese century. But during the next 40 years it made a map progress in the growth of population, the increaseing to the tune of 90-33 per cent on the 12

^{*}Filli was the only town in 1941. In 1951 Relugibet and Rubinij were added. The new towns of 1961 were Congarampur, Rallegney and Islampur.

population. Of course, this phenomenal growth in 40 years (1921-61) expressed as a percentage of 1921 population is slightly misleading as during the decade 1911-21 the district suffered from depletion due to influenza epidemic and other natural calamities which lowered the population of the district in 1921 Census. The rate of variation during the other decades was steadily progressing and the maximum growth rate was observed in the last decade 1951-61. During 1941-51 many things happened which affected the population growth in the district. There was the big famine in 1943 followed by epidemics in 1944. Between 1947-51 there was some emigration of muslims from the district and an influx of displaced persons to the district. According to the figures available in 1951, the number of emigrating muslims to East Bengal amounted to 14,000 of whom 12,375 later returned and the influx of displaced persons from East Bengal was to the order of 115,510, quite the

largest for any district barring 24-Parganes, Calcutta and Nadia.

The significant increase of population during the decade 1951-61 may be largely due to an appreciable fall in the death rate in the district. The public health measures could efficiently control malaria and other epidemics resulting in a steady fall in the number of deaths. Birth rate, of course, did not change appreciably over the decade. From a study of the Table 2-1 in Part II B on Vital Statistists, a confirmation of the idea is obtained provided, of course, the findings are confined to the death rate and birth rate per 1,000 males or females calculated on the estimated population on the 30th June of each year by the Directorate of Health Services. From the available data of Vital Statistics on registered births and deaths, if the following table is constructed the inter-census growth rate of population against the inter-census birth and death rates can be studied.

State and District			Geometric mean	population of d	lecade	Inter-ce	ensus popul	ation grow	th rate
	#, *	1951-60	1941-50	1931-40	1921-30	1951-60	1941-50	1931-40	1921-30
1		.2	3	4	5	6	7	8	9

		21· 4 20·1	20·3 16·1	27·2 20·2	28·3 23·8	8·8 9·1	18·7 15·4	20·7 17·5	25·7 22·8
		*\$	W					•	
		Inter-c	ensus rate of Na	tural increase (re	gistered)	Migratio	n-cum-regis	tration erro	r (rate)
	•	1951-60	1941-50	1931-40	1921-30	1951-60	1941-50	1931-40	1921-30
		18	19	20	21	22	23	24	25
	;	+12·6 +11·0	+1·6 +0·7	+6·5 +2·7	+2·6 +1·0	+15·8 +19·4	+10·8 +15·0	+14·1 + 8·6	+5·2 +6·0

The inter-census death rate of the district came down to a considerable extent from decade to decade. While it was 15-4 in 1941-50, if fell to only 9-1 in 1951-60. But the birth rate (registered) showed an increase from 1941-50 to 1951-60, though its trend was on the declining side at the past decades. The inter-census rate of natural increase (registered) so far as the district West Dinajpur is concerned is only 11-0 during 1951-60, while the inter-census growth rate of population is 30-4, the rate of migration-convergistration error being 19-4, which can be said to be

quite on the high side. Of course, the number of registered births and deaths in the police stations of Islampur, Chopra, Goalpokhar and Karandighi during the period 1951-56 was not available. The birth and death registration data were only considered for the Islampur Subdivision for the period 1957-60 in calculating inter-census birth and death rates, 1951-60.

Two statements are given below showing the growth of population since beginning of the present century in the administrative divisions of the district:

^{*1951} population of the police stations in the Islampur Subdivision was adopted from the report of Shri V. Viswanathan. Their population for the earlier Censuses, was estimated pro-rate on the basis of the 1951 population.

The map of the district given at page xvii shows the variation in population 1951-61 for each police station.

Wide difference in decade rates of variation of population is observed in the police stations of the district. Karandighi Police Station of Islampur Subdivision recorded the highest increase (59.4 per cent), while Hilli Police Station under the Sadar Subdivision registered a decrease in population by 4 per cent during the last decade. Balurghat Subdivision as a whole registered an increase of population by 23.0 per cent which is much below the district rate of decade

variation for 1951-61. The rate of increase in case of Raiganj Subdivision is little higher than that of the district rate. Islampur Subdivision recorded a phenomenal increase of population during the last ten years. The rate of decade variation for Islampur Subdivision is 47.9 per cent over the population of 1951. The police station which recorded higher rate of increase during 1951-61 than the district average are Islampur, Karandighi, Goalpokhar in Islampur Subdivision; Raiganj, Bangshihari and Kaliaganj in Raiganj Subdivision; and Gangarampur in Sadar Subdivision.

Density

The following statement shows variations in density (persons per square mile) between 1901 and 1961;

District/Subdivision/Police Station				VARIATION IN DEN		IN DENSITY	(PERSONS	PER SQUARE MILE)

The density of population of the district and all its constituent parts shows an upward trend from one Census to another. There has been a considerable increase in the density from 1901 to 1961. In the Census year 1921, the district experienced a fall in the density of population but since then there has been no looking back and the density has been on the increase. There has been a sharp rise of density in 1961 over that of 1951. Of course, in Hilli Police Station where the population has decreased during the last decade due to declining commercial importance of the town the density has fallen from that of 1951. The density is the lowest in Chopra Police Station and highest in the Hilli Police Station.

Sex Ratio

There were 906 females per one thousand males in the district of West Dinajpur according to the 1961 Census. In the rural sector there were 914 females per one thousand males and in the urban sector 821 females per one thousand males. The sex ratio of the district is slightly higher than the State ratio. In the State of West Bengal there were only 878 females per thousand males in 1961. The district is showing a

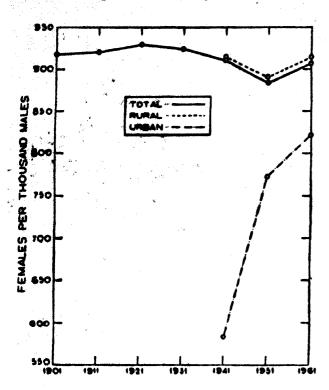

lower sex ratio than that of the State in all Censuses since 1921. In 1901 and 1911 the number of females per thousand males in the district was less than the corresponding number for the State. Since 1901 the sex ratio in the State of West Bengal continued to decline till 1941 and then it began to improve. In the case of the district West Dinajpur there was a rise in the sex ratio in 1911 over that of 1901 and there was further rise in 1921. But since 1921 the sex ratio began to fall. This happened till 1951. In 1961 there was again a rise in the sex ratio. The following statement gives a comparative account of the variation in the sex ratios since 1901 for the district of West Dinajpur and State of West Bengal for Total, Rural and Urban separately:

Ycar		W	est Dinaj	pur	West Bengal			
I CWL		Total	Rural	Urban	Total	Rural	Urban	
1901		918	918		945	994	652	
1911		920	920		925	982	614	
1921		929	929		905	971	591	
1931		923	923		890	961	578	
1941	•	910	913	583	832	945	559	
1951		884	890	771	865	939	660	
1961	•	906	914	821	878	943	70 l	

From a look at the above statement it appears that the change is sex ratio between 1901 and 1961 was not of the same magnitude in the district of West Dinappur as it was in the case of West Bengal as a whole.

Rural-Urban difference in sex ratios indicate selective migration of male population from the rural areas to the urban areas in search of employment.

The following statement shows the sex ratio in different age-groups for the district and the State of West Bengal. The sex ratios calculated on the smooth data of age returns for the State of West Bengal have also been shown (in brackets under each age-group).

The diagram at page xxi shows the different sex ratios in the age-groups for the district and the State. A curve of smooth data for the State has also been shown.

Upto four years of age the females outnumber males. This is seen both in the district and the State. The sex ratio begins to fall in the agegroup 5-9. In the age-group 10-14 it is seen that the sex ratio has fallen to a considerable extent. But in the next higher age-groups sex ratio begins to improve. It is at its peak in the age-group 20-24. Then again there is sharp fall in the sex ratio upto the age-group 35-39. In the next higher age-groups the sex ratio fluctuates alternately, it goes up in one age-group and comes down next. In this way sex ratio rises in the higher age-groups. Digital preference acts as a particular bias in age returns. Women preser to return their ages in the number of years ending with zero. This is clearly visualized in the curve as given in the diagram (p. xxi). The marked fall in the sex ratio in the age-group 10-14 is a common feature for almost every part of the world. The particular rise in the sex ratio in the age-group 20-24 is due to some extent to overstatement of age in the age-group 10-14.

The number of females per thousand males in Balurghat Subdivision is 930. All the police stations in Balurghat Subdivision have shown a higher sex ratio than the district average. The sex ratio of Raiganj Subdivision is 906 females per thousand males which is exactly at par with the district as a whole. The Islampur Subdivision has shown a lower sex ratio than the district average. In Islampur Police Station there are only 847 females per thousand males which is the lowest figure for any police station in the district. Tapan Police Station of Balurghat Subdivision registered the maximum sex ratio in the district with 956 females per thousand

males. The following is the statement of sex ratios for the district and all its administrative units for Total, Rural and Urban areas:

District/Sub	divisi Statio		Total	Rural	Urban

faster than, and even at the cost of, rural population. Before 1941, the area that constitutes the district now was entirely rural. 95.71 per cent of the population lived in rural areas of the district in 1951 and 99:17 per cent of the population lived in villages of West Dinajpur in 1941.

Table A-III in Part IIA of this Volume shows the number of villages and their population for each class of villages for the district and for each police station. Nearly 76 per cent of the total number of villages of the district have less than 500 persons per village. But persons living in all such villages account for 44 per cent of the total rural population of the district. In 1951 this class of villages i.e., villages having population less than 500 accounted for 84 per cent of the total number of villages of West Dinajpur. The villages with population of between 500 and 999 account for 18 per cent of the total number of villages in the district, while in 1951 they constituted only 12 per cent of the total villages. During the last ten years, the villages in higher population ranges have grown in number and now they account for greater percentages of rural population in the district than they did in 1951. The following statement shows the distribution of population by size of villages for the district and the State for the Census years 1961 and 1951;

Rural Population

92.52 per cent of the population of West Dinappur live in villages. A village for Census purposes has been a revenue survey mauza for all Censuses since 1921. In 1901 and 1911 when the cadestral survey had not been completed in most of the districts and when the mauza boundary laid down in the general revenue survey was not always clearly traceable, the term village in Census parlance was rather indeterminate, because it had different meanings in different areas, sometimes it meant a survey mauza and sometimes a residential village. It was since 1921 onward that the term village corresponded to a revenue survey mauza. In 1961, a village as a general rule was taken to be a revenue survey mauza having a Jurisdiction List number. Also in Islampur Subdivision i.e., the areas transferred from Purnea District of Bihar, a Census village has been taken to be the same thing as a survey mauza. But the revenue Thana numbers allotted to these mauzas by the Bihar Survey Department have not been used in the Census of 1961. Provisional numbers allotted by the West Bengal Survey Department to the villages in Islampur were adopted in 1961 Census.

The increase in the rural population of District has been only to the extent of 31-01 per cent over that of 1951, while in 1951 it was only 12-95 per cent over that of 1941. The growth of rural population is lower than that for the total population of the district. This is, because urban population grew

In the district only 391 persons live on an average per village, whereas in the State this average is 686 per village. Almost in all the police stations in West Dinajpur there are less than 500 persons on average per village. In Islampur Police Station this average is 665. This is very close to the State average. The lowest average has been found in Bangshihari Police Station. The number of inhabited villages per 100 square miles has been found to be very low in Chopra Police Station where it is only 87. The maximum density of villages is found in the Hilli Police Station.

Urban Population

For the purpose of the Census, urban area includes (a) all municipal towns, cantonment and other areas having a local civic administration such as town Committees etc., and (b) any other place which satisfies the following lists -(i) it has a population of not less than 5,000 persons, (ii) a density of at least 1,000 persons per Sq. mile, and (iii) three-fourths

of its adult male population are engaged in pursuits other than agriculture.

While 24.45 per cent of the population of West Bengal live in urban areas, in West Dinajpur only. 7.48 per cent of the population live in towns. In other words, while every fourth man in the State is a town dweller in West Dinajpur only one in every twelve men lives in a town. West Dinajpur District is thus less urbanised than many other districts of the State. Before 1941 there was no urban area in what is at present the district of West Dinajpur... In 1941 Hili was the only town in the district. In 1951 Rayganj and Balurghat were declared as towns. In 1961 three more non-municipal towns were added. Thus there are only six towns in the district at present. In 1941 only 0.83 per cent of the population lived in urban areas while in 1951 the percentage of urban population rose to 4.29. The following statement gives an idea of the growth of urban population in the district of West Dinajpur for all its individual towns since their inception:

Name of Town	Status of Town	Year	An Sq. miles	Sq. Km.	Persons	Decade Variation	Percentage Decade Variation	Males	Females
1	2	\$	4	5	6	7	8	9	10
Rayganj .	. Municipality	1951 1961	411	10-64	15,473 32,290	-i- 16.817	+ 108-69	8,768 17,574	6,705 14,716
Balurghat .	. Municipality	1951 1961	2.46	6-37	18,121 26, 9 99	+ 8,878	+ 48-99	10,015 14,619	8,106 12,380
Kaliaganj Gangarampur Islampur	. Non-Municipality . Non-Municipality . Non-Municipality	1961 1961 1961	3-47 3-47 5-37	8-99 8-99 13-91	14,478 9,671 9, 49 9	••	••	7,973 5,179 5,7 8 9	6,505 4,492 3,710
Hill .	. Non-Municipality	1941 1951 1961	1-43	3·70	6,952 8,346 6,932	+ 1,394 - 2,314	+ 20·05 - 27·73	4,392 4,893 3,209	2,560 3,453 2,823

It is the Census practice to classify the towns in six size classes according to population. The classes are:

Class		Population
1		I lakh and above
11	 	50,000 to 99,999
111	 	20,000 to 49,999
IV	 . •	10,000 to 19,999
V	 	5,000 to 9,999
VI	· .	Less than 5,000

According to 1961 population two towns of West Dinajpur District are in Class III, one in Class IV and three in Class V. Percentage decade variation of urban population between 1941 and 1951 is 503.28, while in 1961 the increase was only to the extent of 135.98 per cent over the urban population of the district of 1951. In 1961 the population of Hili town registered a decrease of 27.73 per cent. Hili was an important town in undivided Dinajpur District as a rice trading centre. In the Partition of Bengal 1947, Hili itself was divided into two parts, the railway station falling in the Pakistan side. Truncated and deprived of its main artery of communication, the importance of this town is declining rapidly.

The density of urban population in the district of West Dinajpur is 4,873 persons per square mile against the corresponding urban density of 12,978 persons at the State level. The town of Balurghat is the most densely populated urban area in the district with 10,975 persons living per square mile and the town of Islampur is the most sparcely populated, only 1,769 persons living per square mile.

The sole test of classification of towns in Census Reports hitherto had been population size. In 1961 the Registrar General of India attempted a functional classifications of India's towns on the basis of the predominant function of a town based on the Census data on the Industrial Classification of all workers adopted at the 1961 Census. According to this classification the predominant function of the towns of Hill, Gangarampur, Rayganj, Kaliaganj and Islampur was found to be Trade and Commerce, while Balurghat was a "Service" town.

Age Distribution

Distribution of population by quinquennial agegroups may be obtained from the Table C-II given in Part IIA of this Volume. The following statement shows the percentage distribution of population in some broad age-groups in the Censuses of 1951 and 1961 for the district of West Dinajpur and also for the State:

Percentage of population by age-group

Age-group		1	951	1	961	
			Males	Pemales	Males	Females
WEST	PUR	ř.,				
0-4 5-14 15-54 35-54	•	•	14-07 24-98 32-69 21-18	14-94 25-35 35-02 18-17	16-39 26-03 30-73 20-43	18-62 26-28 32-80 16-43
0-14 15-54 55+	•	•	39-05 53-87 7-08	40·29 53·19 6·52	42-42 51-16 6-42	44-90 49-23 5-87
WEST 1 0-14 15-54 55+	BENG :	AL : :	33-77 58-95 7-28	37-13 55-02 7-85	39-21 53-69 7-10	42·86 49·54 7·60

During the last decade the proportion of children in the age-group 0-4 in the district has increased from 14.07 to 16.39 in case of males and from 14.94 to 18.62 in case of females. The same trend is observed in the age-group 5-14, though the extent of increase in this age-group is not as much as it is in the lower age-group 0-4. The increase has apparently been brought about by a fall in infantile mortality rates and a rise in birth rates. The proportion of population in the lower ages has also considerably increased during the last ten years in the State while it has decreased in the middle age-group 15-54. In the State of West Bengal the percentage of population in the higher ages 55 and over not having appreciably changed between 1951 and 1961, the increase in proportion in the agegroup 0-14 has almost been compensated by the decrease in the age-group 15-54. In West Dinajpur, the proportion in the higher age-group 55 and over has also to some extent decreased during the decade. In this district the proportion of population increased in the lower age-group 0-14 between 1951-61 but in the age-groups above 15 years the proportion decreased. The same trend is seen in both the sexes.

In West Bengal males in the age-group 0-14 make only 39.21 per cent of the total males while in West Dinajpur they make about 42.42 per cent. The proportion of females in the age-group 0-14 is also higher in the district than that of the State proportion. But in the age-group 15-54 the proportion of females is almost the same, both in the district and in the State while this proportion for males is higher in the State than that in the district. In the State about 53-69 per cent of the males are found in the age-group 15-54 and in the district they make only 51-16 per cent.

During the decade a significant change has been observed in the number of young and aged persons i.e., persons in the age-groups 0-14 and 55 and over per 100 of supporting population i.e., persons in the age-group 15-54. This may be seen from the following statement of dependency ratio (i.e., ratio

bottom persons in the age-groups 0-14 and 55+and 190 of those in the age-group 15-54):

•		west dinajpur	WEST BENGAL
1951	Total	86-8	75-0
1961	Total	99-0	93.2
	Rural	99-6	101-6
	Urban	91.8	71.3

The 1961 population in the district as well as in the State bears a larger load of dependants than in 1951. This is possibly due to the result of high fertility and low mortality in the State. This load is, however, greater in the rural areas than in the urban areas. The dependency ratio in the urban areas of the State has failen down in 1961 from the State average of 1951. But in rural areas it has gone up to a considerable extent. This ratio is higher in West Dinajpur than that for the State. The same was the case also in 1951. But in rural areas of West Dinajpur this ratio is lower than that for the rural areas of the State.

Marital Status

Civil condition of the people by agr-groups has been shown in Table C-II in Part IIA. Following is the statement of the percentages of population by age-groups classified by different marital status for the 1951 and 1961 Censuses:

Year			A	Never Married		Married		Widowed		Divorced		
1 CM1				Agr-group	Males	Females	Males	Females	Malcs	Females	Males	Females
1951	•	•	•	. All Ages 0—14 15—34 35—54 55 ‡	49 27 96·16 31·99 4·76 3 63	37-89 89-41 4-84 0-47 1-32	47-64 3-81 65-77 88-51 74-97	80-44 10:40 90-00 67-22 38 -58	3-69 0-03 2-24 6-73 21-40	11:67 0:19 5:16 32:31 60:10	••	••
1961	•	•	•	. All Ages 0—14 15—94 95—54 55→	55-14 99-39 40 07 2 32 3-10	44-63 95-77 4-63 0 29 1-09	41: 62 0-41 57:74 91:31 78:56	44-42 4-07 91-70 68-66 21-09	2:69 N 1:32 5:65 17:62	10:34 0:03 2:58 30:22 76:93	0.55 0.20 0.87 0.72 0.72	0-61 0-13 1-09 0-83 0-89

In 1961 Census during sorting and tabulation all children below 10 years of age were treated as never married, irrespective of their actual marital status returns. Thus there may be some scope for doubt about the observation on civil conditions of the persons in the age-group 0-14.

Apparently child marriage in the district has decreased to a great extent during the last decade. This is specially remarkable in the case of females. While in 1951 about 10 per cent of the females in the age-group 0-14 were married, in 1961 this figure has come down to only 4 per cent. Almost all (99.4%) young men of age 14 or below preferred to remain unmarried in 1961. But in 1951 only 96 per cent of males in this age-group returned them as never married. In 1961 one remarkable feature in the civil condition of the people of West Dinajpur is observed and that is the proportion of married persons has fallen down in comparison with that at the 1951 Census. The proportion of unmarried persons in 1961 has automatically, therefore, increased from that in 1951. This is true in case of both males and females. The proportion of widowed and divorced males and females has also gone down a little between 1951-61. In 1951 nearly 49 per cent of the males and 38 per cent of the females were unmarried. But in 1961 the percentage of unmarried males has gone up to 55 per cent and that in case of females has been about 45 per cent. Very few women in the age-group 15-34 remained unmarried, the majority of them, nearly 92 per cent, being married. But in the age-group 35-54 a negligible fraction of women were returned as unmarried. More than two thirds of the female population in this age-group were married and about one third was widowed. In the higher age-group 55 and over 77 per cent of the females are widows. In case of the males only 18 per cent were widowed in the ages 55 and more.

Of the total males of West Dinajpur only 42 per cent were returned as married, about 55 per cent as unmarried and the remaining 3 per cent as widowed or divorced. In the age-group 15-34 only 58 per cent of males were returned as married. But in the age-group 35-54 as many as 91 per cent of them were married. In this age-group very few remained unmarried so far as this district is concerned. In the case of males they are only 2 per cent and amongst females they make only 0-3 per cent. The number of divorced men and women in the district is very small.

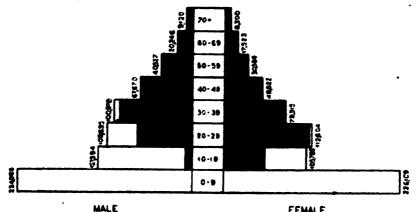

The statement below gives an account of the child women ratio in the district as compared to that in 1951:

Year	Total Rural Urban	Number of children 0-4 yrs. per 1,000 females of 15-44	Number of children 0-4 yrs. per 1,000 married women of 15-44	Number of total widow females per 1,000 married women 15-44	
1951 1961	Total Total	666 858	772 963	293 272	
1901	Rural	865	964	269	
	Urban	758	947	\$15	

The child-women ratio has considerably increased during the last ten years thus suggesting a fall in infantile mortality rates in the district. The childwomen ratio when standardised for married women of the age-group 15-44 illustrates how large is the specific fertility of adult women of West Dinajpur District. These ratios are higher in the rural areas indicating thereby higher fertility in rural areas than in urban areas of the district. The incidence of widowhood has decreased since 1951. This is again higher in urban areas than in rural areas.

 The diagram below is the age-pyramid showing the extent of different civil conditions is each decen-

nial age-groups of the district as returned in 1961 Census. The left horizontal bars stand for the male population and the right horizontal bars stand for the female population. White portions signify the extent of unmarried males and females, checks signify that of married males and females, and blacks signify widowed or divorced males and females. The number inserted sideways to each horizontal bar signifies the total male or female population in that particular age-group. The vertical legends in the middle between the two sets of horizontal bars indicate the age-groups to which the bars relate.

EDUCATION

The district West Dinajpur is educationally quite backward. The progress of education in this district cannot be readily gauged in absence of adjusted literacy data in respect of the present jurisdiction of the district since 1901. Of course, an idea about the state of literacy of the district can be had from 1901 Census figures relating to the Old Dinajpur District. The number of literates per thousand males was 99 and for females it was three per thousand females. The proportion of literates in respect of the present area of West Dinajpur in 1901 was presumably worse than the average given for entire Dinapur District, for with the Partition of Bengal in 1947 the district lost its major seats of learning to Pakistan. The District School Board looking after the Primary Education of the district started a fresh carrier in 1947 and so did the District Board. Balurghat and Rayganj were created municipalities in 1951 and as such they had to exert quite a lot in spreading Primary Education through the system of Municipal Education.

In 1951 the percentage of literacy was 10.50 for the district, while in 1961 the percentage increased to 17.06. During these ten years an increase of 7 per cent in literacy is not very insignificant. Spread of education in the lower age-groups had been successfully achieved in the district during the last decade. In 1951, the number of literates per thousand of young population of the age-group 5-14 was only 24, while this number had risen up to 46 in 1961.

The level of literacy in the district of West Dinajpur in 1961 was much below the State average. In the State of West Bengal the percentage of literacy in 1961 was 29-28 for total, 40-08 amongst males and

FEMALE

16.98 amongst females. The corresponding figures of the district are 17.06 for total persons, 25.96 amongst males and 7.24 amongst females. As regards female education, the district is still very backward. Balurghat Subdivision has shown better results in respect of literacy. Out of one thousand persons of Balurghat Subdivision 215 are literates. The maximum literacy is observed in Balurghat Police Station. The portion transferred from Purnea i.e., the Islampur Subdivision has returned least literacy in the district. The percentage of literacy in this Subdivision is much below the district average. The following statement gives the percentage of literacy figures for total persons, males and females separately for the State, the district and all the administrative units of the district:

State/Distric	ct/Su S tat ic	bdivi on	sion/		Persons	Malca	Females
WEST BENG		R DI	er E	c:	29-28 17-06	40-06 25-06

Hilli .			- :	•	23.70		
Balurghat	•	:	•	•	28.55		
Kumarganj	•	•	•	•	20.00		
Gangarampur	• .	•	•	•	19.00		
Tapan .	•	•	•	•	14-46		
Raigani Sub	سنه	don	•	•	17:06		
Raiganj		•	•	•	21.48		
Kaliaganj	•	•	•	•	18-50		
Hemtabad	•	•	•	•	19.22		
Itahar .	•	•	. •	•	14-36		
Kushmundi	•	•	•	•	16-09		
Bangshibari	•	•	•	• .	15-52		
Lelempur Su	حسنه		. •	•	11-23		
Islampur .			•	•	11.21		
Karandighi	•	• .	• .	•	10-03		
Chopra .	•	•	•	•	11-84		
Goalpokhar	•	•	•	•	11.58		

should be, far better than that observed in the rural areas. 55.33 per cent of the males and 38.71 per cent of the females residing in the urban areas of the district are literates. Urban literacy of the district is not much behind that of the entire State. The statement below gives an idea of the percentage of literacy for males and females separately in the rural and urban areas of the district as compared to that of the State:

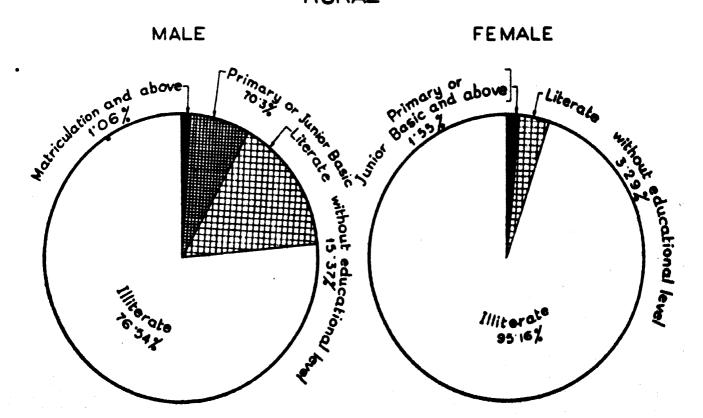

i e e e e e e e e e e e e e e e e e e e		r	Percentage of literacy				
	•		Males	Females			
West Bengal .		. Rural	32.86	9.73			
		Urban	59-59	43-33			
West Dinajpur	• •,	. Rural	23.46	4-84			
		Urban	55- 33	38.71			

The maximum number of literate persons are found in the age-group 15-34 both in the rural and urban areas and that is also the case in the State of West Bengal. In the rural areas of the district female education has been gaining importance recently. This is evident from the fact that the

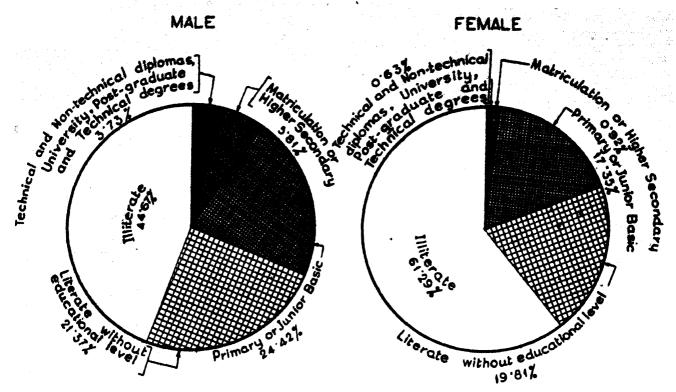

percentage of literate females in the age-group 5-14 is maximum. Distribution of literate males and females above five years of age in the various broad age-groups per thousand of total males or females has been shown in the statement given below for rural and urban areas separately of the district as compared to that relating to West Bengal.

	Agr-group	U	rban	Rural		
		Males	Females	Males	Females

RURAL

URBAN

When the district of West Dinajpur was formed in 1947, it had only three High Schools, seven Middle Schools and 206 Primary Schools. Two Colleges were started after the partition. Both the Balurghat and Raiganj Colleges were opened in about the same time in August-September, 1948. When Islampur area was added to the district in 1956 it had come with a very sad plight of educational standard. Islampur at that time had only one affiliated High School, five Middle Schools and twenty-one Primary Schools. The progress of education in the district since 1951 can be seen from the following statement:

Years	No. of schools	No. of students
1951-52 .	. (a) High—16 (b) Middle—38 (c) Primary—509	5,053 6,05 4 42,258
1952-59 .	. (a) High—17 (b) Middle—39 (c) Primary—509	5,383 2,051 47,933
1953-54	(a) High—20 (b) Middle—46 (c) Primary—616	6,076 2,450 53,931

1957-58	(a) High—24 (b) Middle—80	8,106 4,870 71,091
1958-59	. (a) High—26 (b) Middle—85	8,622 5,515
	(c) Primary-1.048	77.8 3 0

SOCIAL WELFARE

To enlighten the vast mass of people through different media of instructions and entertainments the district did not lack behind the other parts of the State during the recent years. Many adult education centres were opened. The district library was established. Many other libraries were also started in various parts of the district. Folk-entertainments were arranged. The list given below will indicate the progress in the sphere of social education in the district during the period 1956-60.

		1956-57	1957-58	1958-59	1959-60
1	District Library	1	1	1	1
2	Government Managed Full Fledged Social Education Centre	39	49	49	49

LANGUAGE

anguage of the district and the mother-tongue of 72-20 per cent of its total population. In the more respectable classes, Bengali that is spoken does not differ very much from that spoken in the Central Part of West Bengal. The agricultural classes speak a kind of Bengali Patois or dialect which is characterised by a contraction of Bengali words and by free use of a number of Urdu and Hindi words and some words of Central Indian Origin. Urdu has the second largest number of speakers. This language is spoken by 10-14 per cent of the population. Islampur Subdivision has the largest number of Urdu speakers. They make 35-19 per cent of the population of Islampur Subdivision. In other two subdivisions, Urdu is spoken by only a small fraction of the people. At the time of the enumeration, a section of a certain community let loose a propaganda amongst the members of that community to return Urdu as their mother-tongue. This movement was particularly intense in the Islampur Subdivision. The district authorities, of course, took all possible precaution so that accuracy in Census returns was not foiled by any such organised movement. The next major mother-tongue of the district is Santali. 9.29 per cent of the population are Santali speakers. Santali speakers are concentrated mainly in the Balurghat Subdivision, percentage of such speakers in this subdivision being

14.6. Hindi is the mother-tongue of 5.38 per cent of the population of the district. Hindi speakers are evenly distributed in all the three subdivisions. 1.44 per cent of the population returned their mother-tongue as Oraon, most of whom reside in the Balurghat Subdivision. As many as 69 mother-tongues were returned by the people of West Dinajpur. The speakers of the remaining 64 mother-tongues comprise only 1.55 per cent of the population, the percentage of any such individual language being less than one.

The settlers from Santal Parganas and Chhotanagpur in the district are commonly bilingual. For that matter it is observed that the speakers of tribal languages can speak Bengali as well. Bilingualism in the district is not very encouraging. Only 9.4 per cent of the total population are bilingual. The majority of the persons speaking Bengali does not know any other language. Only 3-4 per cent of the Bengali speakers are bilingual, most of them knowing English or Urdu. 23.42 per cent of the Hindi speakers know a second language. Majority of such persons can speak Bengali. Nearly 65 per cent of the Urdu speakers know Hindi and 35 per cent of the Urdu speakers understand Bengali. Most of the speakers of the mother-tongues Kolkamar, Kurmi, Lohari, Mahato, Malpaharia, Paharia, Mundari, Oraon, and Santali have claimed knowledge of Bengali.

RELIGION

The majority of the population of this district profess Hinduism. About 59.87 per cent of the total population of the district reported their religion as Hindu. Islam religion has been claimed to be professed by 39.41 per cent of the population. There are also a few Christians and Jains in the district. Almost all the police stations under Balurghat and Raiganj Subdivisions are predominantly peopled by the Hindus. Of course, in Itahar Police Station of Raiganj Subdivision the difference in number between the adherents of these two communities is very small. In Islampur Subdivision the position is just otherwise. Except in Karandighi Police Station where there is a preponderance of the Hindus, in all other police stations the Muslims form the majority. 63-13 per cent of the population of the Islampur Subdivision are followers of the Prophet. There is also a handful of the Buddhists in the district. The Jains reside mainly in the urban areas of the

If we study the rate of increase of population between 1951-61 by different religions, we find that the percentage increase of the Buddhists 1951-61 in the district of West Dinajpur is to the extent of 104-44. The population professing Christianity have increased during the last ten years by 161-34 per cent. The rate of decade variation of the Jains in the last decade has been 263-05 per cent. The Hindu population have increased by only 26-79 per cent during the last ten years. Percentage increase of the Muslims in 1951-61 has been to the extent of 50-67 per

cent. The groups of Thanas Bangshihari, Kushmundi and Kaliaganj have together shown decadal increase of 24-81 per cent amongst the Muslims and Hemtabad, Raiganj and Itahar of 28-68 per cent. Hilli, Balurghat and Kumarganj Police Stations together have registered an increase of 37-16 per cent while Tapan and Gangarampur Thanas together had shown an increase of 38-57 per cent during the last decade. It is the group of Thanas that came from Purnea i.e., Islampur, Karandighi, Chopra and Goalpokhar that has shown the highest rate of increase amongst the Muslims 83-29 per cent.

A fascinating account has been given about the Muhammadans of the district in F. W. Strong's Gazetteer, 1912. The Muhammadans of the Balurghat and Raiganj Subdivisions of West Dinajpur have been described to be chiefly the descendants of Rajbanshis. These Rajbanshis during the Muhammadan rule converted themselves to Islam sometimes by force or sometimes from motives of expendiency or policy. It is said about Jalal-ud-din, ruler of Gaur about 1420 A.D. that he himself being a converted Hindu forcibly proselytised all the inhabitants of the district except those who could escape into the neighbouring Kingdom of Kamrupa. The Pirs or religious devotees made it a point to exercise a great deal of influence to convert as many as possible of the people of the locality to Islam. The Sheikhs i.s., the Muslim cultivators frequently go by the name Name which means one whose original religion has been destroyed i.e., a convert. A very interesting account has been given by Mr. Strong about a curious sect of Fakirs residing in mauza Balia, J. L. No. 42 of P. S. Raiganj. The religious practices followed by these Fakirs were sort of compromise between Muhammadanism and

Hindu Jogism. Of course, they do not behave in any peculiar way in the present days which can mark them off as distinctly different from other inhabitants.

HOUSING PATTERN

It was for the first time in the 1961 Census that a complete Census of all houses was taken in India on a uniform list called the House-list. A house in this chapter refers to a Census house. A Census house was difined in the 1961 Census as follows:

'A census house is a structure or part of a structure inhabited or vacant, or a dwelling, a shop, a shop-cum-dwelling or a place or business workshop, school,

etc., with a separate entrance.

If a building has a number of flats or blocks which have separate entrances of their own and are independent of each other giving on the road or a common staircase or a common court-yard leading to a main gate, they will be considered as separate census houses. If within an enclosed or open compound there are separate buildings then each such building will also be a separate census house. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance should be treated as a separate census house.'

It will follow from this definition that where a person's homestead consisted of two or more huts built at a short distance from each other around a courtyard, each such hut was treated as a separate Census house.

The other terms that will be encountered with in the following paragraphs are 'household' and 'room'.

A household for Census purposes was defined as— 'A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work preven-

ted any of them from doing so'.

There may be one or more households in a Census house. A room means, 'four walls with a doorway with a roof overhead and it should be wide and long enough for a person to sleep in, i.e., it should be at least 6 ft. long. Unenclosed verandah, kitchen, store, garage, cattle shed and latrine which are not ordinarily used for living and sleeping should not be treated as rooms. An enclosed room, however, which is used for living, dining, storing and cooking should be regarded as a room.'

Pucca houses, i.e., houses constructed with burnt brick are quite uncommon in the district. Mud houses and houses built with bamboo, grass or reeds are more common. Nearly half of the houses are built with bamboos or reeds. Only 2 per cent of the houses are built with burnt brick. C.I. sheets, unburnt brick, timber and cement concrete have also been used as material of wall for the construction of a small number of houses in West Dinajpur. Together they account for only 0.6 per cent of the total number of Census houses in the district. Stone has been used as a material of wall in only two houses and that too in the rural areas. In the urban area as many as 18 per cent of the total houses have been built with burnt brick. Mud houses are naturally less common in the urban areas than in the rural areas. They account for only 16 per cent of the

total urban houses but in more than 60 per cent of the houses in the urban area bamboo or reeds have been used as material of wall. Houses with walls constructed with C.I. sheets or timber are seldom

found in the towns of West Dinajpur.

Most of the houses of the district are found to be thatched with straw, reeds, bamboo, or leaves. In the rural areas nearly 90 per cent of the houses are of such type whereas in the urban area they make only 38 per cent. The next common material of roof is C.I. sheet. In the district it accounts for 10 per cent of the houses. In the rural areas C.I. sheet is used as a material of roof in 8 per cent of the houses. Such type of houses are very common in the urban area. One would find in about 50 per cent of the houses in the towns of West Dinajpur that C.I. sheets have been used as the material of roof. In few cases tiles are also used as a material of roof. Concrete and stone slabs are to some extent used in the urban areas. Asbestos, cement sheets, bricks and lime are seldom used as a material of roof for the houses of West Dinajpur.

Houses are quite sparsely situated all over this district. In the rural area only 248 houses on an average are found per square mile. In the district as a whole one square mile of area contains about 257 houses on an average. In the urban areas this density is only 1,131 houses per square mile. Houses in this paragraph mean Census houses used wholly or partly as dwellings. On an average there are 40 such houses for every 100 persons living in the district. In the urban areas, of course, this number is much less. Only 23 such houses are

found per hundred persons.

Coming to the use of Census houses in the district we find that as many as 72 per cent of the houses are used as dwellings. In the urban areas as many as 78 per cent of the houses are used as dwellings, and nearly 3 per cent of the houses are used as shops excluding eating houses and only 2 per cent of the houses are used as factories and workshops. A small number of houses are used by the urban people for double purposes i.e., as shop and dwelling at the same time.

Classified by owned and rented categories, 96 per cent of the dwellings in the district are found to be owned by their occupiers and the remaining 4 per cent only as rented. In the rural area 97 per cent of dwellings are owned houses but in the urban area the proportion of owned houses is only 70 per cent of total houses. Nearly half of the houses which are used as shop-cum-dwelling belong to the owned category. Though in the urban area this proportion of owned and rented shop-cum-dwelling stands 3: 4.

Majority of the households of West Dinajpur live in one-roomed houses. They make about 63 per cent of the total number of households in the district. The picture is almost the same all over the district irrespective of the area being rural or urban.

Nearly of per cent of the households are occupying two-rounded dwellings and 7 per cent three-roomed dwellings. Households occupying larger number of rooms are more common in urban areas than in rural areas. The number of persons per room works out to be 3.56 for the district, the corresponding number for its rural and urban areas being 3.54 and

3-94 respectively. The households occupying oneroomed dwelling have on an average 4-4 persons per room. In case of two-roomed dwelling only 3 persons on an average occupy one room in a household. Average number of persons per household in the district is 5-41 for the district, 5-38 for rural and 6-04 for urban.

THE WORKING POPULATION

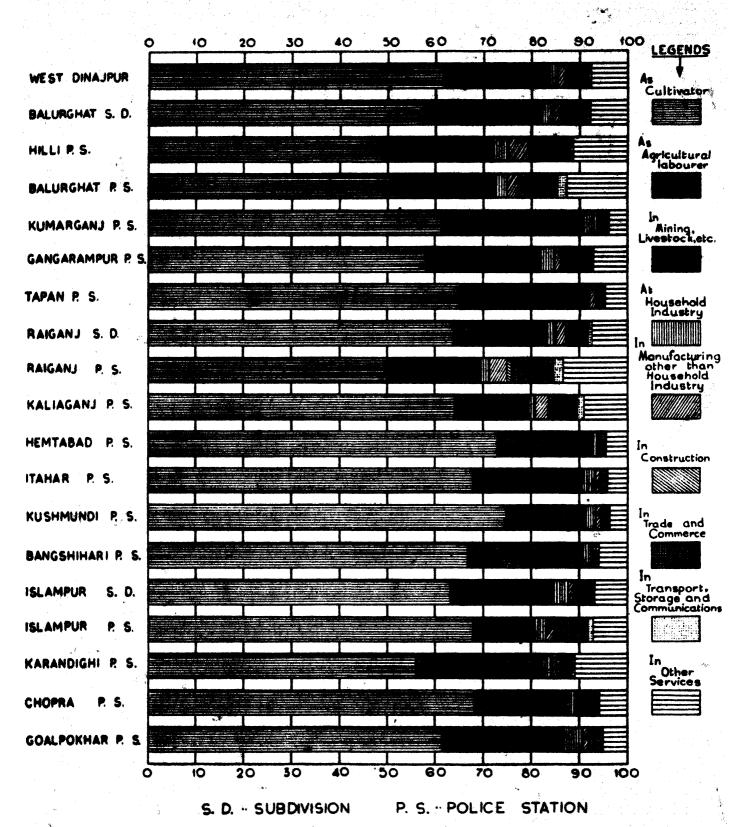

The labour participation ratio i.e., the percentage of workers to total population in the district of West Dinajpur is slightly lower than the State average. This ratio is a bit higher in the case of males but is considerably lower in the case of females. The main sphere of activity of the people of West Dinajpur being confined to the agricultural sector the labour participation ratio for females has been lower than the State average. In the agricultural sector also semale participation depends much upon the pattern of crops produced in the field. Female labours are more usual in rice cultivation than in cultivation of other crops. Female participation is the highest in Bangshihari and Kumarganj Police Stations and lowest in Islampur Police Station. Kushmundi Police Station has recorded highest male labour participation ratio and it is lowest in Balurghat Police Station. The labour participation ratio is found to vary within a close range in all the police stations of West Dinajpur. It varies from 30.05 in Raigani to 36.09 in Bangshihari. The following statement gives the proportion of the total population, males and females engaged in work for the district and its administrative units:

		Percentage of workers to Total persons, males and females

The economy of West Dinajpur is purely based on agriculture. Most of the workers of West Dinajpur are engaged either as cultivators or as agricultural labourers. The distribution of 1,000 workers by males and females and by nine Industrial Categories for the district as compared to that of the State is given below:

		West Bengal	1	West Dinajpur		
Workers	Persons	Malcs	Females	Persons	Malcs	Females
I As Cultivator	385	388	36B	618	638	430
U As Agricultural Labourer	153	144	211	211	198	332
III In Mining, Quarrying, Livestock, Forestry, Fishing, Hunting and Plantations, Orchards and allied activities		44	90	5	5	4
IV At Household Industry	42	30	122	23	12	122
V In Manufacturing other than Household Industry	114	124	49	15	15	26

VIII In Transport, Storage and Communications .	34	38	4	7	7	1
IX In Other Services	134	134	130	74	76	61

PERCENTAGE DISTRIBUTION OF WORKERS

The importion of cultivators both for males and females haigher in the district than the State average. The same is true for those who work as agricultural labourers. The ratio between the cultivators and agricultural labourers in the State is about 2.5: 1,

while for the district this is 3: 1 i.s., the proportion of agricultural labourers with cultivators is lesser in the district as compared to that in the State. Thanawise distribution of workers in each sex in nine Industrial Categories is given below:

			A STATE OF THE STA

							- 40	ACT OF			

In Kushmundi Police Station nearly 77 per cent of the male workers are cultivators. It is a remarkable feature that in all the police stations of West Dinajpur more than half of the male workers work as cultivators. In case of female workers only in Bangshihari, Tapan, Balurghat and Chopra Police Stations more than half have returned themselves as cultivators. In the police station of Karandighi about 50.7 per cent of the female workers are agricultural labourers. In the same police station, the percentage of agricultural labourers amongst the male workers is only 24. The proportion of female agricultural labourers is thus more than the males. In household industry also the females are engaged in higher proportion than the males.

In the State of West Bengal the maximum number

of workers are engaged in the primary sector. This is more so in the district of West Dinajpur. The proportion of workers engaged in the primary sector of industry has been found in the district to be higher than the State average. In the secondary and tertiary sectors the proportion of workers in the district is very low compared to that in the primary sector. Employment in these two sectors is found in a lesser proportion than the State average. The number of workers in the secondary sector has been found to be the least in the district. In the tertiary sector, the proportion of workers is half the State average. The following statement shows the distribution of thousand persons of each sex among primary, secondary and tertiary sectors of industry and Non-workers, 1961 of the district and the State:

		West Benga	l	West Dinapur			
	Total	Males	Females	Total	Males	Females	
Workers	1,000	1,000	1,000	1,000	1,000	1,000	
Primary Sector				T y			
I+II	178	287	55	271	472	50.	
III (except Mining & Quarrying)	12	16	7	2	3	N	
Secondary Sector III (only Mining & Quarrying)+IV+V+VI							
+IX (only Gas & Electricity)	61	100	17	14	18	10	
Tertiary Sector			-				
VII+VIII+IX (except Gas & Electricity)	80	137	15	40	72	5	
Non-workers							
x ,	669	460	906	673	435	935	

In the secondary sector a large proportion is engaged particularly amongst females workers in household industry. In manufacture other than household industries the employment of female workers is quite insignificant. In the tertiary sector workers are primarily engaged in trading and other services. Transport and communication workers are quite few in number in the district.

In West Bengal most of the workers belong to the age-group 15-34, while the age-period 0-14 represent the lowest portion of the working force. In the district of West Dinajpur also age-group 15-34 claims the highest number of workers, but, so far as the most unproductive age-group is concerned, age-period 60 and above accounts for the least of the population at work. Although the proportion of workers at the age-group 15-34 is lower in the district than the State average, the ratio of workers in the age-group 0-14 is higher in the district than in the State. This is because most of the workers in the district are engaged in agriculture, where employment of child labour is not very uncommon. As expected in the urban areas the proportion of child

workers is less than that in the rural areas. The distribution of workers by age-groups for the district and the State are shown below:

Age-	W	est Ben	gal	West Dinajpur		
groups	Persons	Males	Females	Persons	Males	Females
All ages 0-14	100	100	100	100	100	100
0-14 .	3.9	3.6	5.7	6.9	6-8	7∙2
15-34 .	51.6	51.4	5 3·3	49.5	49.0	54-7
35-59 .	38.8	39.2	36-4	38.0	38.3	34-6
60+ .	5.7	5.8	4.6	5-6	5.9	3.5

Considering the Occupational Classification of workers engaged in the non-agricultural sector it is found that in the district of West Dinajpur craftsmen, production process workers and workers not classified elsewhere make the maximum number of workers. Sales workers come next. The third place is occupied by the service, sport and recreation workers. Next are the professional, technical and related workers. The percentage distribution amongst the various Occupational Divisions for the district is given below:

Description ressional, technical and rela-**WORKERS** 8-99 EXECUTIVE **MIMENISTRATIVE,** MARAGERIAL 1-42 2 CLERICAL AND RELATED WORKERS 4.75 SALES WORKERS 23-25 HUNTERS, FARMERS. FISHERMEN LOGGERS AND RELATED WORKERS MINERS, QUARRYMEN AND RELATED WORKERS 0-04 WORKERS IN TRANSPORT AND COM-MUNICATION OCCUPATIONS . 2.71 7-8 CRAFTSMEN, PRODUCTION PROCESS WORKERS AND LABOURERS NOT ELSE-WHERE CLASSIFIED . 39-54 SERVICE. SPORT AND RECREATION WORKERS . 13-67 WORKERS NOT CLASSIFIABLE BY OCCU-0.95

THE 'NON-WORKING POPULATION

There is a wide variance between rural and urban areas in the pattern of distribution of persons not at work. A marked difference is also observed in the distribution pattern of non-workers amongst males and females. In the urban areas the proportion of students amongst male and female non-workers is higher than that in the rural areas. The proportion of dependents in the urban areas is lower than in the rural areas. Ratio of persons engaged in household duties is also lower in the urban areas. Persons seeking employment and those who are unemployed are larger in proportion in the urban areas than in the rural areas. The proportion of whole time students amongst the females are lower both in the urban areas and in the rural areas in comparison with males. The proportion of females in this class is lower because the group of non-workers contains a large number of adult women who are engaged in household duties. Of course, in the district of West Dinajpur the number of school going girls is fewer than boys, number of girls' schools being limited in the district. The distribution of non-workers by eight types of activities is shown for the district total, rural and urban separately:

West Dinajpur

	<u> </u>						
Non-workers	Total		R	Rural		Urban	
	Males	Females	Males	Females	Males	Females	
1 Full time students or children attending school .	229	43	210	82	413	173

SCHEDULED CASTES

Whereas about 19.7 per cent of the total population of West Bengal belongs to the scheduled castes, the corresponding percentage for the population of the West Dinajour District is 21.6. The percentage of scheduled castes in the district of West Dinajpur is thus slightly higher than the State average. In the rural sector of the district 22.5 per cent of the people are scheduled castes against the State rural average of 23.5 per cent. In the State 7.8 per cent of the urban population are scheduled castes, whereas they make only 11 per cent of the urban population of West Dinaipur. Of the total scheduled castes in West Bengal, West Dinajpur contributes only to the extent of 4 per cent. For the rural areas, this percentage is 4.4. The scheduled caste population residing in the urban area of the district account for only 1-6 per cent of the total urban scheduled caste population of the State.

The males outnumber the females amongst the

scheduled castes in the district. There are only 885 scheduled caste females per thousand scheduled caste males in the rural areas of the district. In the urban areas their sex ratio is 849. The sex ratio of the general population of the district is higher than that observed amongst the scheduled caste population. The majority of the scheduled caste workers belongs to the agricultural sector, either working as a cultivator or agricultural labourer.

The maximum concentration of scheduled caste population is found in the Raiganj Subdivision. Nearly 64 per cent of the total scheduled caste population of the district reside in this subdivision. They constitute as much as 34 per cent of the total population of the subdivision. Within the subdivision maximum concentration of the scheduled caste population is noticed in the Raiganj and Kaliaganj Police Stations. The two police stations between themselves account for about one-third of the total scheduled caste population of the district. Next to them come the Kushmundi and Itahar Police

Stations. These two police stations represent onefifth of the total scheduled caste population of the district. Tapan, Gangarampur and Balurghat Police Stations under Balurghat Subdivision come next in order so far as the concentration of scheduled caste population is concerned. Balurghat Subdivision as a whole, accounts for about 30 per cent of the scheduled caste population of the district. About 5 per cent of the scheduled caste population of the district are found in each of the three police stations of Bangshihari. Hemtabad and Kumargani. In Hemtabad Police Station, more than one-third of the total population belongs to the scheduled castes. Nearly half of the population of Kaliaganj Police Station are scheduled castes. They are more than a half if only the rural areas of this police station are considered. In Kushmundi and Raiganj Police Stations more than one-third of the inhabitants are scheduled castes and one-fourth of the people residing in Bangshihari, Itahar, Tapan and Gangarampur Police Stations are scheduled castes.

In the areas transferred from the Purnea District of Bihar i.e., in the Islampur Subdivision of the district West Dinajpur, the number of scheduled castes is quite low. Only 5 per cent of the people of this subdivision have returned themselves as scheduled castes. Amongst the scheduled castes of the district only 6 per cent reside in this subdivision. In the list of scheduled castes and scheduled tribes of West Bengal, some area restriction was imposed on certain castes. · There are certain castes scheduled only in the Islampur Subdivision, which are non-scheduled in other parts of the district and there are certain castes which are non-scheduled in the transferred areas from Purnea and also in the district of Purulia but scheduled in other areas of the State. As for example Rajbanshi, Paliya, Bagdi etc. which are the numerically most predominant scheduled castes of the Sadar and Raigani Subdivisions of the district are not treated as scheduled castes in the Islampur Subdivision. Curiously enough only three out of ten castes scheduled only in the Islampur Subdivision have been returned in the subdivision and that too are confined to a microscopic section of the people. The majority of the scheduled caste population of the Islampur Subdivision come from Musahar, Dosadh, Chamar and Turi castes which are scheduled all over the State.

A phenomenal rise in the population of scheduled castes has been noticed in the district during the last decade. As adjusted figure of the scheduled caste population of Islampur Subdivision in 1951 is not readily available an overall comparison of the scheduled caste figure between 1951-61 is not, therefore, possible. Of course, Islampur Subdivision has only a small fraction of the scheduled caste population, the main bulk of these castes residing in the rest of the district. The district, except the Islampur Subdivision, registered an increase of 117.8 per cent amongst the scheduled caste population between 1951-61. In the rural sector the percentage increase has been almost the same as the district average, whereas in the urban areas the growth of scheduled caste population has been comparatively lower than in the rural areas. In the rural areas of Balurghat

Subdivision the increase in scheduled caste population has been to the extent of 90 per cent. The scheduled caste people residing in the rural areas of Raiganj Subdivision have increased by about 133 per cent in the last ten years. The population under almost all the castes have increased by large percentage during the last ten years. Rajbanshis which formed the major scheduled caste population in 1951 and which is still the main scheduled caste of West Dinajpur, have increased by 38 per cent. Paliya which is the second major scheduled caste in the district have also registered a phenomenal increase in its number. Only ten thousand persons were returned as Paliya in the 1951 Census, while in this Census as many as 67,000 persons have returned themselves as belonging to this caste. Nearly a cent per cent increase has been noticed in the case of Namasudras. There were nearly 6,000 Bhuimalis in 1951 while their number in 1961 has been recorded at about 7,000. Nearly 4,000 persons belonged to Chamar caste in 1951, while in this Census more than 6,000 persons have returned themselves as Chamar. In a few cases while the return was insignificant in 1951, in 1961 Census quite a large number of persons returned themselves as belonging to such castes. The cases of Bagdi, Doai and Gonrhi may fall in this category. Less number of persons have returned themselves as Bhuiya in 1961 than in 1951. People belonging to the castes Hari, Musahar and Jalia Kaibartta have increased in the last decade by more than three times.

About one-third of the total scheduled caste population of West Dinajpur belongs to Rajbanshi and nearly one-fourth to Paliya. The next major scheduled caste in the district as per 1961 Census is Bagdi. Namasudra comes next. Doai, Gonrhi and Hari follow next in order. Of course, in the urban area of the district the same order is not observed. Namasudras form the major scheduled caste population in the urban area. Rafbanshis come next followed by Jalia Kaibarttas and Dhobas. Percentage of Jalia Kaibarttas and Dhobas in the rural sector is insignificant. Bhulmali, Paliya and Chamar ranks fifth, sixth and seventh places amongst the scheduled caste population in the urban tract of West Dinajpur. The following statement shows percentage distribution of individual scheduled caste to total scheduled castes in the rural and urban areas separately:

Rural Urban 2 3 8-12 3.25 0.20 0.38 Bhuimali 2.38 6-35 2-12 5.77 Chamar 6-72 0-20 Dhoba Doei Donadh 1-19 2·96 2·77 1-19 Gonrhi 2-03 Hari **Talia Kaibartta** 1-64 Namasudra 3-78 13-52 412 Nuniya 24-18

Percentage of castes

arly one-fifth of the Rajbanshi population mand in Kushmundi Police Station. Quite a considesable number of persons belonging to this cases is the found in Balurghat, Gangarampur, Tapan, Kallaganj and Raiganj Police Stations. Maximum number of Paliyas, about 30 per cent of them, are found in the Raiganj Police Station. A good number of them, slightly more than one-fourth, is also found in Itahar Police Station. In Hemtabad Police Station about 12 per cent of the Paliyss reside. Bagdis live mostly in Kaliaganj, Raiganj and Kushmundi Thanas. 99 per cent of the persons belonging to Dosi caste reside in Kaliaganj Police Station. Balurghat Police Station accounts for about 19 per cent of the Namasudras of the district. Quite a good number of them also live in Tapan Thana. Persons belonging to this caste are found in all other police stations of Balurghat and Raiganj Subdivisions. Kaliaganj Thana is the abode of Gonrhis. 39 per cent of the Haris reside in Raiganj Police Station and about 30 per cent of them live in Itahar Police Station. They are found in varying strength in almost all the police stations of Sadar and Raiganj Subdivisions.

Persons belonging to scheduled castes are not far behind others in the district so far as literacy is concerned. In the rural area of the district, while only 14.57 per cent of the population are literate, 10.63 per cent of the scheduled caste population have been found to be literate. This indicates that both males and females amongst the scheduled caste population appear to have come out of their traditional backwardness in the field of education. Following is the statement of the percentage of literacy in the case of total population and scheduled caste population in the district of West Dinajpur for the rural and urban areas separately:

			Percen	tage of	literacy
		1	Persons	Males	Females
Total Population	Rural		14-57	23-46	4-84
	Urban		47-83	55-33	38 ·71
Scheduled Castes	Rural		10-63	18-49	1.75
	Urben		16-34	29.71	7-65

The percentage of literacy amongst scheduled castes in the urban tract is not as good as that observed in the case of rural areas. It seems that people belonging to scheduled castes residing in the rural area have been taking fuller advantage of the educational facilities and concessions available to them than those living in the urban areas of the district.

The livelihood pattern of the scheduled castes is not very much different from that observed amongst the general population of West Dinajpur. The district being mostly agricultural, maximum number of workers are engaged in the agricultural sector. The same is true for the scheduled caste population also. In the district only 328 persons out of every thousand of the general population are workers and remaining 672 persons have returned themselves as non-workers. But amongst the scheduled castes there are 340 workers for every one thousand of their total number. The percentage of non-workers in the scheduled caste population is thus less than that

observed in general population. Of the total workers in the district nearly 62 per cent worked as cultivators and 21 per cent worked as agricultural labourers. These percentages amongst the scheduled caste population are 63 as cultivators and 23 as agricultural labourers. In other fields of industries i.e., in Categories III to IX only 17 per cent of the total workers are found. In case of scheduled castes the percentage of workers in Categories III to IX to total scheduled caste workers is only 14. The percentage of female workers is very low in comparison to the male workers amongst scheduled castes. 59 per cent of the male population returning as scheduled castes are workers, while only about 6 per cent of the female scheduled castes have returned themselves as workers.

There has been a fine account about the Rajbanshis and their main sub-castes Paliyas and Deshis in the 'The Tribes and Castes of Bengal' by H. H. Risley, I.C.S. (Volume 1, Official Edition, published in 1891, pp. 491-500), an extract from which is quoted below:

"Kochh, Kockh-Mandai, Rajbansi, Paliya, Desi, a large Dravidian tribe of North-Eastern and Eastern Bengal, among whom there are grounds for suspecting some admixture of Mongolian blood. The transformation of the Kochh into the Rajbansi, the name by which they are now known in Rangpur, Jalpaiguri, and Kuch or Kochh Behar, is a singular illustration of the influence exercised by fiction in the making of caste. As described by Buchanan at the beginning of the century and by Hodgson some fifty years ago, the Kochh tribe was unquestionably non-Aryan and non-Hindu. Now the great majority of the Kochh inhabitants of Northern Bengal invariably describe themselves as Rajbansis or Bhanga-Kshatriyas -- a designation which enables them to pose as an outlying branch of the Kshatriyas who fled to these remote districts in order to escape from the wrath of Parasu-Rama.

Alongside of the Rajbansi, but usually distinct in respect of intermarriage and the eating of cooked food, we find the large sub-caste of Pallyn. They are further subdivided into two subordinate groups, known as Sadhu or pure and Bahu Paliya. As a general rule that the main distinction between the Sadhu and Babu Paliya consists in the fact that the latter eat pork, fowls, crocodiles, lizards and the leavings of men of their own caste, and indulge freely in strong drink, while all these things are forbidden to the Sadhu Paliya. Another sub-caste known in Dinajpur is Desi, who regard themselves as somewhat superior to the Paliyas. A Desi can take rice, water, sweetmeats, etc., from a Paliya man, but not from a Paliya woman; nor is there any intermarriage between the two groups.

The Kantal Rajbansi are a smaller group found scattered in several districts of Northern Bengal, who cultivate the soil, hold various kinds of tenures, serve as gomashtas, and sometimes practise medicine. The Tiar or Dalai are a fishing group mentioned by Buchanan, whose characteristic pursuit is fishing in the shallow drains or ditches connected with swamps and rice-fields."

In 1961 Census 22 scheduled tribes were returned. in the district of West Dinajpur. In addition, some persons returned themselves as belonging to the scheduled tribes but did not report the specific name of the tribe(s) to which they belonged. The percentage of scheduled tribe population in West Dinajpur is higher than the State percentage. Only 6 per cent of the total population of the State belong to the scheduled tribe. But in West Dinajpur 12.9 per cent of the people have been returned as belonging to scheduled tribes. In the rural areas the proportion of scheduled tribe population is much higher than that in the urban areas of the district. The scheduled tribes living in urban areas of the State make only 0.6 per cent of the total urban population of West Bengal but this percentage in case of West Dinajpur is higher. Nearly 2 per cent of the urban population have returned themselves as belonging to the scheduled tribes. Of the total tribal population of West Bengal, West Dinajpur's contribution is to the tune of 8 per cent.

Females outnumber males amongst the scheduled tribes in rural areas. There are 1,026 females per sex ratio is better than that observed amongst the

general population of West Dinajpur.

Amongst the scheduled tribes of West Dinajpur the maximum number, about a half of them, are found in Balurghat Subdivision. In Raiganj Subdivision nearly 36 per cent of the tribes reside, and about 12 per cent of the total tribes of West Dinajpur are inhabitants of the Islampur Subdivision i.e., the area transferred from Purnea District of Bihar. Due to area restriction imposed on certain tribes not all the tribes scheduled in other parts of West Dinajpur are also scheduled in Islampur. Similarly some of the tribes are only scheduled in Islampur whereas they are not so in other two subdivisions of the The maximum number of the tribes of West Dinajpur live in Balurghat and Tapan Police Stations. Next comes Bangshihari Police Station in Raigani Subdivision in so far as the concentration of the scheduled tribe population is concerned. Gangarampur, Kumarganj, Kushmundi and Itahar Police Stations come next in order. Together they account for the habitation of a little less than onethird of the scheduled tribe population of the district.

Nearly 22 per cent of the population of Balurghat Subdivision belong to the scheduled tribes and 30 per cent of the population residing in the rural areas of the Balurghat Police Station are scheduled tribes. Scheduled tribes are more or less evenly distributed all over the subdivision of Balurghat. In the Bangshihari Police Station of the Raiganj Subdivision as many as 26 per cent of the people belong to the tribes. In scheduled Islampur Subdivision, Karandighi Police Station is the abode of maximum number of persons belonging to the scheduled tribes. 13 per cent of the total population of Karandighi

belong to the scheduled tribes. The growth of scheduled tribe population in West

Dinajpur is not as fast as that in the case of scheduled castes. During the last ten years there has been

a rise of only 21 per cent amongst the scheduled tribe population of West Dinajpur district. The rise of female population amongst tribes has been more prominent than that of the males. During 1951-61 the scheduled tribes female population has gone up approximately by 27 per cent whereas the percentage increase amongst their males in the last decade has been only 15-5. Though preponderance of scheduled tribes is observed in Balurghat Subdivision in 1961, the scheduled tribe population of this subdivision have increased only by two per cent over that of 1951 Census. In the Raiganj Subdivision scheduled tribes have increased by an appreciable degree. The percentage of decade growth amongst the tribals in Raiganj Subdivision has been found to be to the extent of 61.7 over that of the 1951 scheduled tribe

population of this subdivision.

Santal is the main scheduled tribe of West Dinajpur District. It accounts for nearly 72 per cent of the total scheduled tribes population living in the rural areas and about 86 per cent of the total tribes population living in towns of West Dinajpur. This tribe has increased by 28-9 per cent over their population recorded in 1951 Census. There are about twenty two thousand Oraons in the district. Amongst the tribals living in rural areas Oraons make 13 per cent. Next in order comes Munda. This tribe accounts for about 9 per cent of the tribal population of West Dinajpur. Kora and Mahali tribes are also found in the district by a considerable number. There are also some Malpahariyas in the district. There has been an enormous rise in the population of Malpahariyas. Malpahariya and Mahli were treated as belonging to the scheduled castes and not scheduled tribes in 1951 Census.

Santals are found all over the district. Their concentration is highest in Bangshihari and Balurghat Police Stations. They are found in quite a good number in Tapan, Gangarampur, Kumarganj, Itahar, Raiganj and Karandighi Police Stations. Oraons are also spread over all over the district but a large concentration of them is found in Tapan Police Station only. Nearly 42 per cent of the Oraons are inhabitants of Tapan Police Station. Quite a good number of them, about 20 per cent, live in Balurghat Police Station. In Gangarampur Police Station their number is also quite good. Mundas mainly live in Balurghat and Kushmundi Police Stations. Mundas are also found in quite a good number in the Hilli Police Station. Koras are mainly found in Raiganj and Bangshihari Police Stations. They are also found in small numbers in Kushmundi, Hemtabad and Kaliagani Police Stations. The principal of places of habitation of Mahalis are Balurghat, Gangarampur, Kumargani, Tapan Thanas.

The condition of literacy amongst the scheduled tribes of West Dinappur is not very encouraging. In the rural areas of the district only 5-19 per cent of the scheduled tribes are literates and in the urban areas the percentage of literacy amongst the tribal people is only 12.39. Thus, the level of literacy amongst the tribes is much below than that of general population of West Dinajpur. The district as a whole is educationally backward, and the tribal people are much behind others in respect of education

and theracy. The extent of female literacy amongst the scibal population is almost negligible. In the urban areas female literacy amongst the tribes has been found to be to the extent of 3-42 per cent. In the metan areas of the district only two persons have attained their educational leavels as Matriculation and above. These two persons are Santals. In the rural areas 68 males and three females amongst the tribal people have passed Matriculation Examination. Santals are the most literate tribes in the district.

The labour participation rate is higher among tribals than in the general population. 43 per cent of the total tribal population are workers, whereas the percentage of workers amongst the general population in the district is 32.7. Majority of the workers are agriculturists. 63 per cent of the tribal workers are engaged in cultivation and 32 per cent work as agricultural labourers. The remaining 5 per cent work in other categories. Nearly 60 per cent of the male tribal population are workers. Amongst the females as many as 26.5 per cent were returned in 1961 Census as workers. Amongst the non-workers of the tribal population very few have returned them as unemployed or seeking employment. Only 172 males and 3 females had been seeking employment for the first time at the time of enumeration in 1961.

67 males and 16 females were unemployed and seeking work at that time. The majority of the persons under these two categories belong to the Santals.

TRIBAL WELFARE

The nomadic tendency of the tribal people has made them move from one place to other. The frequent change of residence and settlement in any distant corner of the village are very common amongst the tribal people. They were never in favour of any fixed settlement in any particular area. This acted against the extension of any scope for their development. Colonization of scheduled tribe people unless achieved, no planned development can be attained for the welfare of the tribal people. At present the tendency to leave home amongst the tribals has been checked to an appreciable extent. Educational facilities have been extended to them with a view to enlighten the tribal folk in the context of the present civilization. It is hoped that in the near future the tribals will form a valuable class in the society. Different schemes that were undertaken for the development of the tribal people of West Dinajpur are given below:

No. of

PERIOD 1951-1950

Schemes	red. or Schemes taken up	spent (Ra.)
CO-OPERATIVE:	e.	
Setting up of New Public Granaries and management of Old Public Granaries	• 16	114,450
EDUCATION:		
(a) Purchase, construction and repair of Students' Hostels (b) Purchase of 81 Bighas of land for maintenance (c) Tuition fees, Examination fees, Hostel fees of the Students	S	22,169 7,750
and the price of their books, etc. (d) Aid-Fund for the education of the Backward Classes (e) Sports Competition, Folk-dance, Folk-song and Exhibition	••	151,653 13,321 7,335
(f) Aid for setting up of Night Schools	33 9	7,700
 (g) Aid for setting up Junior Basic Schools (h) Repair of Primary Schools (i) Management of Adults' Education Centres 	10 92 2	176,959
PUBLIC HEALTH:		A STATE OF THE STA
(a) Boring of Tube Wells, and Deep Tube Wells, Digging and construction of large Masonry Wells and Cement Concrete Wells etc.	356 & 63 plat- forms	231,694
(b) Purchase of costly medicines from the Medical Pharmacies for free distribution	20	7.850
(c) Supply of drinking water in the areas of Scheduled Tribes	••	12,190
AGRICULTURE & REARING OF CATTLE:		
(a) Agricultural fairs, supply of seeds at reduced production of fruits etc.	••	21,129
(b) Supply of high bred cocks and hens for rearing and breeding at reduced price	•	6,346
(c) Distribution of goats among the families for rearing and	In 4 Blocks	
with a view to augmenting their earning of livelihood (d) Distribution of pigs among the families for resping and with		2,840
a view to augmenting their earning of livelihood	In 2 Blodu	2,960

(g)	Financial help (paid at a time) to a successful student to		
	establish him in trade	1	250

AGRICULTURE

The district of West Dinajpur is predominantly agricultural. In its old days, Dinajpur was agriculturally very prosperous. It was primarily due to the favourable formation of the land that agriculture prospered. In recent years the district still remains one of the big rice procurement centres of the State, though with the Partition of Bengal 1947, only the less fertile agricultural lands have come over to the Indian side.

The district being situated in the Gangetic plain almost the whole area is covered by alluvial deposits of recent formation. In the central part of the district the soil is of pali type. The ash coloured soil containing a much larger proportion of sand is much more retentive of moisture than purer clay. Even in the dry season the plough and other agricultural implements being able to penetrate it some vegetables and other crops can be grown in this soil. As such, two crops are generally grown in the pali tracts, common rotation being autumn rice followed by winter rice or pulse. As one goes down to the south one comes across the khyar variety of the soil. The characteristics of this soil are that in dry weather due to its very low retentive capacity of moisture it becomes exceedingly hard and impenetrable and in the heat of summer it simply becomes destitute of vegetation. In wet weather it changes into soft sticky mud. Thus, the khyar ordinarily bears a single crop.

Of course, in recent times under the development programme double cropping has been experimented in the khur area and it has been successful to a great extent. Chora or balia is also observed on both sides of some of the larger rivers like Atrai. This is not true pali but is rather soil in transmission stage with larger proportion of sand. The patches of thest type of lighter soil had its origin in the sand and silt deposited by the rivers when they overflowed their banks. Of course, this type of soil is seldom found in the district at present. In the southern part of the district the bariad makes its appearance, the higher ground of which is seldom cultivated but the lower ground is an excellent winter rice land. In the lower reaches of the rivers Nagar, Punarbhaba and Mahananda large stretches

of land are given up to jungle on account of its occasional meeting with the floods. This tract of land sometimes bears boro crops.

Old Dinajpur district was always a surplus area and rice export was one of the main items of trade and had an important place in the economic life of the district. Dinajpur rice was a name in the rice market of Bengal. Reviewing the agricultural conditions prevailing in the district in his settlement report, 1942 Mr. F. O. Bell observed that land utilisation both in the khyars and the pali tracts of the district was not quite at its best. In his opinion new crop pattern could have been introduced, double cropping could have been successfully executed in many tracts where people were contented to have only a single crop. The cultivators were half hearted in their endeavour to produce more corps in the field. Weeding of jute, aush paddy was haphazard. Agricultural implements were not properly utilised. Soil was not properly prepared. People at that time could remain satisfied with what little they produced. But Partition of Bengal changed the situation altogether. Pressure & a larger population on less fertile land made increased production an imperative. The agriculturists felt the advantage of using better seeds, proper manures and utilising better implements. Better irrigation facilities were also extended to them. Thus, in recent times, the cultivators of this district could produce 63-90 maunds of paddy, or 22-50 maunds of mustard, or 18 maunds of jute or 4 hundred maunds of sugarcane per acre.

The principal crops of the district are winter rice (haimanti or aman), autumn rice or bhadoi, jute, rape and mustard, sugarcane, cold weather crops such as pulses, tobacco, chillis and vegetables. Boro is also cultivated to a limited extent. Winter rice is a most important crop and as such the production of this crop has the highest place in the agriculture of this district. Autumn rice that is inferior in quality is also produced to a considerable extent. Jute is the main cash crop. Previously people used to take onion and chilli as principal cash crops, but now a days production of jute has drawn attention of the cultivators of West Dinajpur and there has been a marked increase in the production of jute. After the Partition, Raiganj has become one of the busiest export centre of jute. The areas

Substitution is one of the most important jute producing centre of the State. With the inclusion of this part the district of West Dinajpur has made a distinct contribution to the production of jute in the State. The following statement will show how jute production has grown up in recent times in the district:

Year	Jute cultivated land (in thousand acres)	Quantity of Jute produced (in thousand bales)	Quantity produced per acre (in bales)	
1947-48	16-1	46.5	2.88	
1958-59	123-8	393-0	2.97	

In Raiganj and Kaliaganj Thanas two important oil seeds viz., rape and mustard are grown. Tobacco has been grown on a considerable area, but the finer tobacco areas have gone over to East Bengal. Chillis are quite a profitable crop. They are grown in good quantity in Kaliaganj Thana. The most important pulses that are grown in the district are arhar and matar. Kaliaganj and Kushmundi are the places where they are principally grown. These are generally grown as a second crop in the khyar tracts of the district.

The district is not noted for growing any special type of fruits or vegetables. Amongst the fruits and vegetables grown in the district there are bananas, mangoes, jackfruits, and pine-apples. The better varieties of any of these fruits are seldom found in the district. Chinichampa variety of the plantain is more common and also is very popular. The best variety of the mangoes are gopalbhog, fazli and lambabhaduri. Pummelos and papiyas are also cultivated. A few trees of litchis are also found here

and there. Tamarind, bel and jess are of the commonest wild fruits found in the district. Date-palms and tel are also found. Tel is generally found in Gangarampur, Tapan, Bangshihari and Itahar. Potatoes, sweet potatoes, brinjals, radish, arum, cucumbers, gourds and pumpkins are the principal vegetables of the district. Turmeric and onions are also grown to a considerable extent. Onions are regarded as cash crops by the cultivators of the district. Beans, dantarg and satisfy are produced for daily consumption by the people. Cauliflower, cabbage, carrot and turnip are being grown in recent times, as is evident from a good supply of these articles in the markets of the towns. Ground-nut is grown in Hemtabad and Raiganj.

IRRIGATION

In normal years when rainfall is plentiful irrigation becomes minor problem to the agriculturists of West Dinajpur. In dry years some attempt is always made to irrigate land by lifting water from the tanks. Water is generally raised by two persons with the help of triangular mat baskets tied by rope at the corners or by hollowed out tree trunks with some weight at one end which are forced down into the water and allowed to spring up so that a stream of water is projected through a drain directly to the field. Water-lifts from the rivers and streams are seldom undertaken as channels of the rivers are too deep to lend themselves readily to such an operation. Irrigation channels and wells are too few and far between. The irrigation projects that were taken up by the government during the Second Five Year Plan period are given below:

Scheme	Police Station	Sanctioned Money	Area of benefited land	Remark
1	2	3	4	5 (%)
Sitala Bill Drainage Scheme Rajnagar Hasua Drainage Scheme Preservation of Ranipur Bill from floods of Gamari River Construction of a Regulator	. Raiganj . Itahar . Itahar . Gangarampur (Vill. Indra- narayanpur)	Rs. 38,130/- Rs. 289,653/- Rs. 97,693/-	500 acres 2,200 ,, 880 ,, 300 Bighas	Completed 500 mds. more paddy grown in the first year
First phase of Churaman Bandh	. Kushmundi	Rs. 6,600/-	• •	An area of 10 sq. miles free from floed havoc
Second phase of Churaman Bandh Regulation of water Danga Bill	. Kushmundi . Balurghat Gangarampur	Rs. 4,300/- Rs. 3,500/- Rs. 9,000/-	•••	••
To save Hilli from flood havoc	. Hilli	Rs. 500,000/-		••

The district West Dinajpur is famous for tanks. Existence of innumerable tanks scattered all over the district tends to show that an extensive system of tank irrigation prevailed all through the district. A definite pattern in the situation of tanks is easily discernible. Usually, the biggest sheet of water is laid at some high point of topography, the smaller tanks being generally found to surround the big tanks at lower level which signifies that a very efficient

system of tank irrigation used to operate in former times. The existence of these tanks still bears testimony to the traditional past of the district. These tanks vary in area from the splendid streches of water to be more justly called lakes or meres to insignificant small ponds. The depth of high banks of these tanks in the khyer tract are best preserved. Tanks of Bangshihari, Kushmundi, Gangarampur and Tapan Thanas bear testimony to this. The

history of this portion of the country confirms that this tract was one of the most important populous areas in eastern India upto the mediaeval period but one wonders at how these places look so abandoned. The details of some of the tanks of Balurghat and Raiganj Subdivisions are given as follows:

Name of Tank			ь	ength of the ottom of the mer side of the tank (Yards)	Breadth of the bottom of the inner side of the tank (Yards)	
1				2	3	
Bangshihari P.S. Altadighi Malyandighi Gourdighi	•	•	•	1,280 1,300 1,300	270 3 00 270

Dhaldighi, Malyandighi and Altadighi are said to have been excavated by the Muslim Rulers. Pransagar was excavated in the 18th century by the Raja of Dinajpur. Due to neglect most of these tanks were overgrowing with reeds and other aquatic plants. But in recent years the Government have taken up the scheme of tank improvement and have spent a considerable amount of money in securing irrigation and excavation of tanks. Drinking water, irrigation and pisciculture are the main object for which tanks can be best utilised. During the First Five Year Plan period i.e., 1951-56 a total number of 95 tanks were taken up under this scheme and at a cost of about Rs. 220,828/- nearly 2,684 acres of lands have derived benefit of tank irrigation. During the Second Plan period i.e., 1956-60 a total number of 137 tanks were taken up for improvement. Better irrigation facilities were extended to nearly 3,296 acres of lands due to this scheme. A total cost of about Rs. 305,621/- was incurred for the purpose of tank improvement in the district during this period. Government efforts have encouraged many of the local people to take up the scheme of tank improvement at private level. If these vast sources of water are properly maintained and untilised with people of West Dinajpur will definitely derive better benefit in agricultural improvement, public health and pisciculture.

CO-OPERATION

Before the introduction of the First Five Year Plan, the condition of the co-operative societies in the district was far from satisfactory. In 1950-51, only an amount of Rs. 217,268 was given as loan to 2,200 members through 162 rural co-operative societies. In fact, during that period the activities

of the co-operative societies were limited only to the field of advancing agricultural loans to their members. The amount of such loans was not enough to meet the actual requirements of the agricultural families, as the Central Co-operative Banks could not cope with the demands of the member societies. During the First Five Year Plan, the rural co-operative societies increased in number and their financial structure was also strengthened. Towards the end of the First Five Year Plan i.s., 1955-56 an amount of Rs. 671,959 was distributed as agricultural loans to 6,750 members through 294 co-operative societies. In addition, during that period six public granaries were established on co-operative basis for the scheduled tribes. Two industrial co-operative societies received an amount of Rs. 25,750 and one co-operative weaving society received Rs. 5,000 as loans during that period. During the Second Five Year Plan the co-operative department in the district initiated positive schemes towards the development of co-operation in the district. The main purpose of the schemes was to strengthen the co-operative societies through which necessary amount could be distributed as agricultural loans so the members. The following statement shows the progress of cooperative societies in the district:

			For the co of Go	Govt. help in	
	No. of Society	No. of Godowns	Loans	Govt. grant	running Societies
1956-57 1957-58 1958-59	4 8 12	1 2 2	7,500 15,000 15,000	2,500 5,000 5,000	10,200 15,644

A scheme of introducing several service cooperative societies in the district was taken up with a view to developing the rural societies and extention of agriculture. During the Second Five Year Plan period, a large sum of money was distributed as agricultural loan through different co-operative societies in the district. In 1955-57, an amount of Rs. 1,170,084 was distributed to 11,583 members. In 1957-58, 12,150 number of members received Rs. 122,433 as agricultural loans. In 1958-59, an amount of Rs. 1,236,505 was advanced to 12,360 members as agricultural loans.

The Central Co-operative Bank was also reorganised during the period. A scheme was adopted for amalgamating the Balurghat Central Co-operative Bank Ltd. and Raiganj Central Co-operative Bank Ltd. and thus forming one economically sound District Central Co-operative Bank. Long-term loans are advanced from Balurghat Land Mortgage Bank to agriculturists. In 1956-57 Rs. 20,180, in 1957-58 Rs. 33,825 and 1958-59 Rs. 25,675 were distributed as long-term loans. Co-operative farming was also introduced in the district. Nine such farming societies were established upto 1958-59. For a smooth running of such societies Rs. 8,200 were given as loan and an amount of Rs. 4,000 was given as grant and in addition to that a subsidy of Rs. 2,209 was given. Agricultural Marketing Societies and Industrial Societies were also introduced in the district.

Dinajpur District is purely agricultural. It most backward districts in the State so far as indus-trialisation is concerned. Except for a few rice mile oil mills and handloom weaving industries no industry had made any headway so far. The whole pattern of non-agricultural employment leans heavily towards village industries and the maximum number of persons employed in secondary sector belong to the section of craftsmen etc. There were only 34 registered factories in West Dinajpur in 1960, of which 32 were rice mills. Average daily number of workers employed in registered factories as obtained in 1960 was 1,684 only.

For development of small scale industries in the district during the Second Plan period trainingcum-production centres were set up where artisans were trained to persue their avocations with improved technics and tools. The list of such centres are

given below:

Particulars of No. **Organisations**

Details of the Scheme

Training - cum-Production Centre of Jute and Wool Industry (for Scheduled Tribes), Pagliganj, Balur-

- Training cum-Production Centre of jute cutting and weaving (for Scheduled Castes), Baghan, Kaliaganj
- Training cum-Production Centre of Rope Industry, Islampur
- Ideal Indigenous Oil Mill Čhhoto Parua, Centre, Raignaj
- Mobile Weaving Training Centre, Trimohini, Balurghat
- Khandeswari and Exhibition Centre, Raigani
- Centre, Raiganj
- Training Centre for Hand made Paper, Taranagapur, P.S. Kaliagnaj (Raiganj)

1

Imparting of practical training to the members of the Scheduled Tribes in order to encourage them in producing articles of jute, cotton and

Imparting of practical training to the members of Scheduled Castes for jute cutting and weaving and of cotton goods.

Imparting of practical training to people irrespective of castes and creed for making rope from jute and other fibre like hemp and mesta.

Ideal Indigenous Oil Mill Centre set up for development of oil industry with the help of improve type of indigenous oil mill.

Imparting of practical training for weaving and attractive design for weaving. (N.B. This centre will be removed to Tapan from next April).

Imparting of training for making Gur and Khandeswari by adopting improved methods and formation of bv co-operative society for the workers with a view developing the industry. view

Co-operative Blacksmith Endeavouring to give incentive to the village artisans and to develop the blacksmithy industries in villages and to bring them under co-operative modety.

> Setting up of training centres for hand made paper and forming of co-operative society for the artisans who have completed their training course.

Handloom Centre. Balurghat

Cotton thread is supplied to the handloom weavers of Salurghat area, the number of the weavers not being mor than 200 and cloths produced by them are taken on cas their syment of payment of their w Moreover, steps for impo ment of the hand industry are taken.

Mobile Training Centre for making Leather Goods Imparting of training to the Harijans for making leather goods through improved methods and setting up of co-operative society.

During the Second Five Year Plan period an attempt was also made to bring artisans of the district under co-operative enterprise. 45 industrial co-operatives were organised. Of these co-operatives those organised by females took a prominent part in industrial activities. The main household industries in the district are 200-Production of rice, atta, flour, etc. by milling, dehusking and processing of crops and foodgrains; 220-Manufacture of bidi; 235-Cotton weaving in handlooms; 273-Making of textile garments including raincoats and headgear; 288-Manufacture of materials from cork, bamboo, cane, leaves and other allied products; 350—Manufacture of earthenware and earthen pottery; 360-Manufacture of iron and steel including smelting, refining, rolling, conversion into basic forms such as billeus, blooms, tubes, rods; 393-Manufacture of jewellery, silverware and wares using gold and other precious metals. (The numbers refer to Indian Standard Industrial Classification).

TRANSPORT AND COMMUNICATION

The district of West Dinajpur has very little of railways. The portion of the North Eastern Frontiar Railways which serves the district extends to Radhikapur from Raiganj covering a distance of about 20 miles and from Dalkhola to Islampur covering about 40 miles. The railway touches the police stations of Kaliaganj, Hemtabad, Raiganj, Karandighi, Goalpokhar and Islampur. ganj, Rayganj and Islampur are the only towns connected by Railways. Kaliaganj is the nearest railway head to Balurghat, the district Head-quarters, situated 60 miles away. The principal means of communication in the district is by road. Road transport has, therefore, automatically achieved a great importance in West Dinsjpur. The district covers quite a good length of road from north to south. To reach most of the Thana headquarters from the district town one has to traverse the entire distance by road. Road system in West Dinajpur has attained a steady progress since the First Five Year Plan. The Roads Development Department started their divisional office at Kaliagani during the first plan period with a view to controlling the road development in a planned manner.

In its early days the 68 miles long road connecting the district town of Balurghat with one of its subdivisional headquarters Raiganj was a kutchha one under the management of the District Board. The only vehicle available for transport was the bullock cart. The First Plan started with converting the District Board unmetalled roads into metalled ones thus making a fine net-work of metalled roads connecting each town, police station, railway station and trade centre. The 68 miles long road between Balurghat and Raiganj became a metalled State highway within four years of the first plan period. From Balurghat this road proceeds northwards following the eastern Bank of the Atrai and then crosses the river at Patiram, 8 miles north of Balurghat. It then turns west and passes through Gangarampur, the headquarters of the police station bearing that name and an important trade centre. At Gangarampur the road crosses the river Punarbhaba and then proceeds towards Baniadpur via Bangshihari. At Bangshihari the road crosses another important river of the district, the Tangan. From Baniadpur the road turns north-way and at about 10 miles north of Baniadpur it enters Kushmundi Thana and there it touches Dhankol, one of the principal hat (Trade centre) of North Bengal and then passing through Kaliaganj Town and Hemtabad Thana it crosses National Highway No. 34 at Rayganj Town and ultimately leads to Raiganj Railway Station. This road was constructed at a cost of about Rupees 1 crore and 33 lakhs. The main bridges on this road are on the Atrai at Patiram, on the Punarbhaba at Gangarampur and on the Tangan at Bangshihari. These bridges were constructed at a cost of about 12 lakhs of rupees.

National Highway No. 34 was taken up for construction during the first plan. This road is to connect Calcutta with Siliguri. It passes through Gajol at Malda District and then Itahar Thana and the Rayganj Town and then Karandighi Thana and ultimately passing by border of Purnea District it reaches Siliguri. During first plan 30 miles of this National Highway No. 34 were completed between Raiganj and Daikhola. During the second plan the rest of this road was taken up for completion. Many bridges both small and big are found on this road. The main bridges are on the Kulik, Gandhar, Nagar, Mahananda, Gamari and Sui rivers.

By the side of the State highway two branch roads, one about eight miles long from Patiram to Kumarganj and another about nine miles long Gangarampur to Tapan were constructed during the first plan at a cost of about Rs. 12,60,000 only. Many unmetalled roads, bridges were also constructed during the first plan. A detailed account of the different roads maintained by the Public Works Department of the Government and other district and village roads has been given in Tables 12 and 13 in Part II B of this Volume.

Road transport system improved by quite an appreciable extent during the recent years. It took about 2 days time to reach Raiganj from Balurghat

even in early 1950. But now regular bus services ply from early morning till evening from Balurghat to Kaliaganj and Balurghat to Kaliaganj. Taxtes are available. Station wagons can also be hired for passenger transport. Moreover North Bengal State Transport Corporation Services operate on several routes connecting Hilli with Raiganj and Balurghat with Malda, Raiganj, Jalpaiguri; Tapan with Gangarampur; Goalpokhar with Islampur etc.

Nearly 2,889 persons are engaged in Transport and Communications in the district. They make about 0-67 per cent of the total working population of this district. Most of the transport workers of the district are employed in road transport. 371 persons out of 1,099 total drivers in road transport were returned as drivers of buses and lorries etc.

There is an Air Strip at Balurghat and occasional non-scheduled services are run by private firms connecting this town with Calcutta by air.

The number of the post offices in the district is only 172, out of which only 18 have the facilities of Postal Savings Accounts. There are only 6 telegraph offices in the district. Only four towns Balurghat, Hili, Rayganj and Kaliaganj have got telephone exchanges. The number of telephone connections in Balurghat at the end of 1962 was only 90.

NATIONALITY AND MIGRATION

Almost the entire population excepting a microscopic fraction returned their nationality in 1961 Census as Indian in the district of West Dinajpur. Only 366 persons returned themselves as belonging to non-Indian nationalities. Of them 312 claimed themselves to be Pakistani nationals. Nepal nationals numbered 44.

Majority of the persons of West Dinajpur were born in the district. They constitute about 79.3 per cent of the total population. The rest 20.7 per cent of the population of West Dinajpur were born outside the district of enumeration. Amongst males those born outside the district constitute only 20.9 per cent, amongst females they make 20.5 per cent. Of the total migrants to the district as many as 13-1 per cent were born in the State of West Bengal but outside the district of West Dinajpur. Amongst males they make 11.5 per cent and amongst females they make 14.9 per cent. Persons born in other areas of the State were found mostly in the rural areas of the district of West Dinajpur. They make 15.1 per cent of the total migrants to the rural areas of the district and in the urban areas they make in the 6.4 per cent of the total urban migrants into the district. About 62.9 per cent of the total migrants were born in Pakistan. They make 61.1 per cent amongst males and 65 per cent amongst females. Of the rural migrants they constitute 59-5 per cent and of the urban migrants they make 74-4 per cent. Amongst the persons coming from other States of India, the contribution of Bihar is to the highest

per sunt of the total migrants into the district. Amount males shey are 22.9 per cent and amongst females only 17.1 per cent. Persons born in Uttar Praisant come next in order, persons born in Orissa and Majasthan following next. The following is the extract Table D-II for the district of West Dinajpur according to the place of birth of the population:

GAZETTEER

Balunghat—Headquarters tosyn of the district and of the subdivision of the same name, situated in 25°13' N. and 88°47' E., on the banks of the Atrai river, containing a population of 26,999. It contains the district offices, civil and criminal courts, a registration office, a college and a high school. The latter is a promising institution. There is a large and well found hospital-dispensary started principally by private subscriptions, the local zemindar, the late Rajendra Nath Sanyal, being a liberal subscriber. There is little worth describing in the town of Balurghat itself. It is a very ordinary town in appearance, though, being situated on the high banks of a fairly large river, it is well drained and healthier than many of the places in the district. The view from both banks of the river is picturesque enough especially in the rains. The nearest railhead is Kaliaganj, about 60 miles due north-west. The Balurghat airport is about two miles north of the town.

Balurghat Subdivision—The Sadar Subdivision of the district, lying between 25°10′ and 25°32′ N., and 88°23′ and 89°01′ E., with an area of 585·6 Sq. miles. It contains a population of 403,448, the density being 689 per Sq. mile. The number of villages is 1,090. The subdivision is divided for administrative purposes into five police stations, viz., Hilli, Balurghat, Kumarganj, Gangarampur and Tapan. It was formed in 1947.

Bangshihari—Headquarters of the police station of its name, 39 miles west of Balurghat and forms the important trijunction of the Malda-Balurghat road and the Bangshihari-Kushmundi-Kaliaganj-Raiganj road. There are public offices in this police station. There are many ancient sites within the Thana which extends over an area of 134.2 Sq. miles. At Bangshihari near the bridge over the Tangan old curved stones have been salvaged and preserved on the western bank. Similarly at Andharmanik (J.L. 267) on the Malda-Bangshihari road where the latter crosses the Baliakhari, the ferry point is known as Patharghata which contains remains of an old stone temple. Names such as Bara Kasba, Kismat Kasba, Araji Hujuri Kasba, on either side of the Malda-Balurghat road, near the border of Malda District adjacent to Deotala in Malda are suggestive of a string of Muslim forts. The name Habili (J.L. 192) very near Andharmanik close to the Malda-Bangshihari road is also suggestive. The road which takes off from Malam (J.L. 200), two and I miles south west of Bangshihari, from the Malda-Bangshihari road and goes north, and then west to Maliandighi and Altadighi to the north-western corner of the Thana is an old brick paved road and still contains the remains of an old bridge. There is an interesting old mosque at Gopalpur (J.L. 123) about 4 miles north of Malam where the road bends to the west. Gourdighi at Bairahata (J.L. 5) is an ancient Hindu tank while Maliandighi (J.L. 112) and Altadighi (J.L. 4) are celebrated Muslim tanks. Kasba (J.L. 108),

Bairahata (J.L. 5) and Ekdala Bahirhata now is Kushmundi Police Station contain the ruins of the seats of Muslim power in the 15th and 16th centuries. The country all round is strewn with the ruins of old buildings. In the north east Ekshabad (J.L. 230) and Sihal, the former about 6 miles to the north east of Bangshihari Police Station and the latter 7 miles to the north east of Bangshihari on the Bangshihari-Mahipaldighi road are ancient villages, once famous in history.

Churamas—A big village on the Mahanands on the south-western border of the district, in the jurisdiction of the Itahar Thana. It is 14 miles from Raiganj Railway Station. It is a considerable grain mart, the paddy and other produce grown in the surrounding country being exported in hoats down the Mahananda. The Churaman Zeminskas, an old family with considerable estates in the neighbourhood, have their home here and their family residence about 7 miles from Raiganj is a large and commodious, red building with extensive grounds. There is a Government dispensary close to the house and boys' and girls' schools.

Gangarampur-Village in the Balurghat Subdivision on the east bank of the Punarbhaba river. It is situated on a main road 32 miles west from Balurghat Town and is the headquarters of a police station 127 square miles in extent. There are several interesting places in the neighbourhood. Within a mile of the village there is a splendid old tank, called Dhaldighi, dating from Muhammadan times, where the largest cattle fair in the district is held. This fair is a very old one, but of recent years its importance has declined, owing to the competition of other fairs which have come into existence in the vicinity. In Muhammadan times Gangarampur was called Damdama and was a frontier military post. The commander of the troops, called the Wazir, is said to have lived on the banks of the Dhaldighi tank which was probably excavated by the Muhammadans, as its lie from east to west seems to indicate. In later times under British rule Damdama was the seat of a Munsif as well as of a Daroga. A little above Gangarampur on the east bank of the Punarbhaba are the extensive ruins of Bannagar, the city of Ban Raja, a mythical Hindu monarch a devotee of Shiva, who fought with Krishna, and is said to have been ultimately overthrown by an infidel race from the west, possibly identical with Alexander's Greeks. The site of this ancient city appears to have orginally contained the remains of many stone temples and other buildings of massive architecture, but for centuries now the ruins have served as a quarry for builders all over the district, and four pillars of coarse granite and a slab or two of sandstone, which form part of a ruined mosque but clearly have a much earlier origin, are all that is left of its ancient grandeur. Other portions of the mosque are of brick and indeed the whole site of the city is so thickly strewn with bricks

must like clear that a great number of brick buildings must like stood there at one time. I think it probable that most of these bricks date merely from Muhamindan times, and are the remains of the lines in which the troops were quartered. The University of Calculate in 1937-8 undertook the excavation of Bargath and brought out a report in 1948. Some of the objects salvaged are preserved in the Asutosh Museum of Calculate University and some are with a local club Practice Bharate at Balurghat. Tradition attributes the Tapandighi in police station Tapan is a fine tank more nearly resembling a lake, which is situated 8 miles south of Gangarampur, to Ban Raja and near it are many remains connected with his name. Another interesting old tank situated in the Gangarampur jurisdiction is the Kaldighi lying a little to the east of Dhaldighi. This tank is attributed to Kala Rani, queen of Ban Raja. Two miles south of Gangarampur is Nayabazar (manza Gopalpur) a large grain mart on the banks of the Punarbhaba, from which a considerable export of paddy is carried on by river.

Heratabad—Headquarters of a police station of its name in Raiganj Subdivision, covering an area of 74 Sq. miles. A full account of Hemtabad will be available in Buchanan Hamilton's description of the division of Hemtabad published elsewhere in this volume at page xii. The description holds good to this day. Hemtabad is 4 miles north of Bangalbari Railway Station on the Katihar-Radhikapur Railway Line.

Hili-A town at the eastern extremity of the district, which used to be a very important rice centre before the Partition of 1947, having been on the Bengal and Assam Railway Line. The denial of the railway line after the Partition has diminished the importance of the town. Before 1947 Hili used to have 16 to 18 rice mills but since 1950 quite a number of them have been dismantled and re-etsablished in places like Kardaha, Bangshihari, Kaliaganj and Raiganj. Hili also used to be an inland port called Hili Bandar on the left bank of the Jamuna river. The boat traffic has also died away on account of the Partition.

Itahar—The south-westernmost Thana of Raiganj Subdivision 165-1 Sq. miles in extent. Itahar the headquarters of the police station is situated almost in the centre of the police station. In this police station too there are many ancient sites, one of which is Churaman (J.L. 164) which is about 7 miles south by west of Itahar. Such names as Subarnapur (J.L. 165), on the Mahananda and Indran (J.L. 16) on the Sui river and Amritakhanda, Rudrakhanda, Brahmakhanda on the boundary of Itahar in Raiganj Police Station are very suggestive of ancient settlements.

Kaliaganj.—The headquarters of a police station in Raiganj Subdivision, the police station covering an area of 120-3 Sq. miles. Kaliaganj is now the most important railway centre in West Dinajpur District, the other two being Raiganj and Radhikapur. The distance from Kaliaganj to Balurghat by road is

about 60 miles. Having acquired importance after 1947 as a railhead and the central point on the road connecting Raiganj with Balurghat the police station has flourished beyond measure and the more important rice mills of the district are now located in Kaliaganj.

Kardaha—Traditionally Kardaha is the place where Krishna cut diff the 998 hands of Bana Raja and burnt them. Kardaha forms one of the important zemindari kulcheries of the Dinajpur Raj and has several ruins and temples. It is now an important grain mart. It is situated about 7 miles west of Tapan Police Station on the east bank of the Punarbhaba, about 8 miles south of Gangarampur.

Kumargani—Headquarters of a police station in Sardar Subdivision north of Balurghat Police Station. The Thana is 110-8 Sq. miles in extent and used to form an important inland port on the Atrai, midway between Dinajpur and Balurghat on the Dinajpur-Balurghat road.

Kushmundi—Headquarters of a police station in Raiganj Subdivision. The extent of the Thana is 119.9 Sq. miles. The police station is about midway between Kaliaganj and Bangshihari on the Kaliaganj-Bangshihari road. This police station is also studded with many ancient sites. There is a raised ridge running across a great length of the Thana, which is known as the Ushaharan road, over which Aniruddha son of Krishna is supposed to have eloped with Usha, daughter to Ban Raja. About seven and half miles east of Kushmundi is the celebrated Mahipaldighi (J.L. 190) and about two miles further cast of Mahipaldighi is Panchanagar (J.L. 217) the ancient site of Panchanagari mentioned as unidentified in the History of Bengal Vol. I by R. C. Mazumdar. Ekdala (J.L. 197) is adjacent to Sikel of Bangshihari and about 2 miles to the north of Elahabad mentioned before. This Ekdala is also an ancient site. At the western corner of Kushmundi there is Ekdala Bahirhata (J.L. 39). The Thana is served by several roads all of which can be negotiated by jeep in February.

Mahipaldighi This is a large tank by the side of , the Malda-Dinajpur town road about 71 miles east of Kushmundi in the Thana headquarters of Kushmundi. It is thus described by Buchanan Hamilton:-"In the north-east part of this division is a very large tank. supposed to have been dug by Mohipal Raja and called after his name. The sheet of water extends 3800 feet from north to south, and 1100 feet from east to west. Its depth must be very considerable, as the banks are very large. On the banks are several small places of worship, both Hindu and Moslem. but none of any consequence; nothing remains to show that Mohipal ever resided either at the tank or at Mohipur, near it; but there is a vast number of bricks, and some stones, that probably belonged to religious buildings, that have been erected by the person who constructed the tank. One of the stones is evidently the lintel of a door, and of the same style as those at Bannogar, and may have been brought

from the ruins of that city. The people in the neighbourhood have an idea that there has been a building in the centre of the tank; but this is probably devoid of truth, as there is no end to the idle stories which they relate concerning the tank and Mohipal. Both are considered as venerable or rather awful, and the Raja is frequently invoked in times of danger." In 1793 a branch factory of a larger indigo concern in Malda was erected at Mohipaldighi by one Mr. Thomas, who combined the functions of indigo planter and Baptist Missionary. The remains of the old indigo vats are still to be seen on the north bank of the tank. It does not appear that the factory was ever very large or prosperous, or that Mr. Thomas had any great success with his mission work in that neighbourhood. It is said that Mr. Thomas utilised some of the old bricks and stones, spoken of by Buchanan Hamilton, in erecting his factory buildings. It was here that William Carey the missionary, linguist, and horticulturist, first set up his mission and perhaps his first printing press, in the first year of nineteenth century. The tank with its lofty embankments covered with well grown trees, and its great expanse of water fringed with tall featherytopped reeds, is one of the most beautiful spots in the district, and something of grandeur and mystery still clings to it. A remarkable thing about this tank is that fish of the carp family caught in it are so tough and oily as to be quite uneatable. The flesh indeed is said to resemble rubber in consistency.

Narai—This is a village in Gangarampur Thana (J.L. 102) about 4 miles east of Gangarampur Police Station on the Gangarampur-Balurghat road and about 2 miles north-west of the junction of the old Dinajpur-Murshidabad road. There are ruins of as many as 8 tombs said to be those of old Mughal generals, who during their Assam expeditions fell victims to fever or epidemic.

Raiganj—Headquarters of the Raiganj Subdivision about 80 miles west of Balurghat. It is the centre of a police station 186.4 Sq. miles and is also a railway station. Raiganj is, next to Balurghat, the largest and most important centre in the district. population at the last Census was returned as 32,290. The greater part of the town and surrounding country used to be owned by the Maharaja of Dinajpur, who has a large kachhahri there, and who founded the charitable dispensary. He derives a considerable profit from the market, in which fish is an important commodity. The Churaman Zemindars also have valuable property in the town. A considerable trade is carried on in jute and oil-seeds, and, besides many jute godowns belonging to native merchants, the large Greek firm of Rally Brothers had a jute press near the railway station. The river Kulik runs through the town and there is a brisk trade by boat during the rains. Kasba Mahaso (J.L. 176) barely a mile west of Hemtabad and Chhoto Parua (J.L. 184), about 3 miles south west of Kasba Mahaso on the Kaliaganj-Raiganj road, in which can be seen the remains of Badsah-ka-takht, are now in Raiganj Police Station.

Raiganj Subdivision - The western subdivision of the district fying between 25°15' and 25°50' North latitude and 88°02' and 88°23' East longitude. The subdivision, created in 1947 extends over an area of 799.9 Sq. miles, has a population of 541,323 and consists of the police stations: Bangshihari, Kalisganj, Hemtabad, Kushmundi, Raiganj and Itahar. The headquarters of the subdivision is at Raiganj on the Kulik river. Part of the former Katihar-Parbatipur line runs through this subdivision which has four railway stations: Raiganj, Bangalbari, Kaliaganj and Radhikapur, Beyond Radhikapur the railway line enters East Bengal. This subdivision is one of the most important centres of jute in North Bengal, the land being fertile and containing much pali soil. It is now opened up by two important highways. The highway Balurghat-Bangshihari-Kushmundi-Kaliaganj-Hemtabad-Raiganj is expected to join National Highway No. 31 or the Bihar-Assam road while the Malda-Bangshihari highway has opened up the south. Within this subdivision the Raiganj-Itahar-Churaman road, the Raiganj-Bindol road, the ancient Raiganj-Itahar-Pandua road part of which is called the Makdam band, the Pandua-Gajol-Dehabanda-Raghunathpur-Kaliaganj road, the Bangshihari-Birol road are all remains of a fine net-work of roads connecting important sections of this subdivision.

Santosh or Mahisantoshgarh—(J.L. 71 Santosh Palashdanga). About 5 miles due west of Balurghat. There are ruins of an extensive Garh or Fort in this place, with a tank to the south of the fort. There are also ruins of a large house to the south of this tank, supposed to be the Assembly Hall of a Hindu ruler. There is a Darga in front of the garh where there are 2 Muslim graves one beside the other.

Tapan—Headquarters of the police station of its name in Sadar Subdivision, the area of the police station being 170.3 Sq. miles. This must be a very ancient place. There is a large tank called Tapandighi which is the biggest sheet of artificial water in the district. Tradition says that it is the tank at which Ban Raja used to offer his tarpan. There are ruins of 2 Muslim forts at Kasba (J.L. 64) and Kasba Madhabpur (J.L. 65), while there are large mounds suggesting buried structures at Dwipkhanda (J.L. 140) barely 2 miles to the east. Tapan is on the junction of the Kardaha-Balurghat road with the Gangarampur-Porsha road.

Karandighi (in police station Karandighi)—The local people associate this tank with Karna of Mahabharata. It is believed that if one promises to make an offering if his wish comes true and then take a dip in the tank, the wish is fulfilled. The offerings promised are made on the 1st Vaishakh following. A mela is held in Vaishakh at the banks of this tank.

Asuragarh (in police station Goalpokhar)—There are ruins at Asuragarh.

Festract from 'An Account of Land Management in the District of West Disappur, 1870-1952' by Shri A. Mitra, I.C.S.

The figures related in Sections I to IV all refer to undivided Dinajpur district.

The present area of Dinajpur district after recent transfers is returned by the Boundary Commission at 4,095·14 square miles or 2,620,889 acres. In 1870 the Collector estimated that 2,032,287 acres were actually under cultivation, namely, 1,016,148 acres under rice, 201,801 acres under jute and 841,338 acres under other crops.

Generally speaking a cultivator's entire holding is under rice, with the exception of a small patch around the homestead on which he raises crops of vegetables.

No improvement seems to have taken place in the quality of rice grown in Dinajpur; but the Collector reports that a great deal of marsh land, formerly waste, has been brought under rice cultivation within the last 25 years. The soil appears to have decreased in productive power by over-cropping; it is said that the land now produces less by one-fifth than what it did 25 years ago.

Sugarcane cultivation appears to have declined in Dinajpur district; and on this subject I extract the following remarks from the Revenue Surveyor's (Major Sherwill) report: "In former years the cultivation of sugarcane was carried to a much greater extent than it is now in Dinajpur. Various reasons are assigned for its decline. Among others it is asserted that the land has become less favourable to its growth since the waters of the old Tista have left this part of the country. However this may be, the deterioration of the cane is unquestionable."

At harvest and seed time gangs of labourers come to Dinajpur from Purnea and other districts for field work, and are paid in money either by the day or month. Many permanent labourers are employed on the holdings of larger agriculturists; they are paid a small money wage in addition to their food, but never by a share of that crop. Many husbandmen who have a larger holding which they can cultivate with their own hands instead of employing hired labour for the purpose, make over the land on a melayer tenant to another person to cultivate. The landlord advances the seed, the tenant finding labour, oxen and implements. At harvest time after the crop has been gathered in, the seed grain originally advanced is repaid, and the balance shared equally between the proprietor and the cultivator. Occasionally the kind are provided by the landlord who in this case receives a larger share of the crop than if the cultivator had to find them. Occasionally also it happens that the landlord makes a money advance as well, but such instances are extremely rare. Women and children are largely employed for field work.

Of the total surplus rice of Dinajpur it is roughly estimated that one-half is exported to the north-western provinces by way of the Tangan, Kulik,

Punarbhaba and other streams into the Mahananda and so into the Ganges; and that the remaining half is exported southwards. Most of the exports to Calcutta come by way of Atrai into the Mathabhanga. A little also finds its way down the Mahananda and on to Calcutta by way of the Jalangi route. The traffic on the Atrai river to Calcutta goes almost entirely down the Mathabhanga till the middle of October; after which if the Mathabhanga gets dry it goes round by the Sundarbans or by way of the E.B. Railway. In 1872, 844,424 maunds or 30,822 tons, in 1873, 789,420 maunds or 28,898 tons of rice were exported. The whole of this, however, is not Dinajpur produce. A great deal of the rice of the west and south-west of Rangpur district is collected at the Dinajpur marts on the Atrai and Karatoya and so sent to Calcutta. Of the marts Patiram, Kumarganj, Chandganj, Kallaganj, Chak Gopal, Fakirganj, Rangamati, Paglibandar, Samjia, Brahmapur and Balurghat, are all on the Atrai river and in Dinajpur district. All these marts are in close proximity to each other.

Yield per acre—A good average yield from land paying a rent of Rs. 1/8- per bigha or 9s/- an acre s stated by the Collector to be from 8 to 10 mds. of paddy per bigha or 171 to 22 cwts. per acre. Exceptionally good land which pays as high as Rs. 3/per bigha or 18s/- per acre, should yield 16 to 17 maunds of paddy per bigha or from 35 to 37 cwts. per acre. Upon some lands a second crop of pulses or oilseeds is grown. Khier land produces only one rice crop in the year. But pali land produces the sus or autumn rice together with a cold weather crop The Collector considers that a of pulses or oilseeds. good return from land yielding both crops and paying a rental of Rs. 1/8/- a bigha or 9s/- and acre would be 9½ to 12 maunds of produce per bigha equivalent to from 20 to 26 cwts. per acre; and from land at Rs. 3/- per bigha or 18s/- an acre, 18 to 20 maunds of produce per bigha equivalent to from 39 to 44 cwts. per acre. These estimates are based on the standard bigha of 14,400 square feet.

Average land per agricultural family—A farm of 5 ploughs or about 25 acres in extent is considered a large holding for a peasant; but some of them cultivate as much as 12 ploughs or 60 acres. Three ploughs or 15 acres is considered a comfortable holding; and indeed a cultivator could maintain a small family from a single plough or five acres of land, although he would not be so well off as a respectable retail shopkeeper. As a class the husbandmen are generally in debt. The land is chiefly held by tenants at will; the proportion of cultivators with occupancy rights in the soil does not, in the opinion of the Collector, exceed one in every five of the general body of cultivators. There are very few husbandmen indeed who hold their lands under a right of occupancy, and who are at the same time exempt from enhancement of rent. No class of small proprietors exists in Dinajpur

district who own, occupy and cultivate their herediachers and little less than half the area of the district is tary lands themselves, without either a zamindar or superior landlord of any sort above them, or a subtenant or labourer of any sort below them.

Rice constitutes the staple crop throughout the district. Of the total food supply the aman or winter

crop grown on low lands and usually transplanted furnishes from 80 to 1441 96 per cent. The aus or autumn crop grown on high lands, about 17 per cent; the boro or spring crop grown on the borders of marshes and rivers in certain tracts supplies from 4 to 8 per cent. This last is the only crop in the district which demands irrigation and the water required is easily obtained from the immediate neighbourhood. Though the area of rice cultivation has widely extended in recent years, it is said that the productive powers of the soil have decreased owing to overcropping. Among miscellaneous crops may be mentioned maize and millet, pulses, oilseeds, tobacco, jute, sugarcane, pan. The staples grown for export are rice, jute and tobacco. The cultivation of sugarcane is on the decline.

Khior land is never allowed to lie fallow. But beli requires an occasional rest of about one year in every five. The principle of the rotation of crops is not known. There is still a good deal of spare land capable of cultivation, to be found in the south of the district.

There is little peculiarity in the land tenures of Dinajpur. It is estimated that over five-eights of the total area of the district the superior landlords have parted with their rights in favour of any other metayar tenure holders. Only a small fraction of the cultivators have won these rights of occupancy of continuous holding of more than 12 years. The great majority are mere tenants at will.

Yield per acre—The average produce of an acre of good rice land renting at 9s/- is about 20 cwts. of rice. Exceptionally good lands will sometimes yield as much as 37 cwts. per acre.

III 1903-04-Not available.

The following is a statement of land employment in the district: IV District Gazetteer, 1912

Descripti	ion			Area
Area of the district Area under rice	•		3,946 998,700	sq. miles acres or 79.6 per cent. of the net cropped area
Aman rice .	•	• •	68-7	per cent of the net cropped area
Aus or autumn rice	•	• •	. 10	per cent of the net cropped area
Boro rice	. •		92,000	Very small area
Jute Rape and mustard	•		90,000	acres
Sugarcane	•		25,000 9,800	
Area not available (rivers, beels, ar			•	
forests)		•	500,000	acres
Oulturable waste,		her than	237,030	Acres
Contract fallows		•	505,000	Acres

cultivated. It is thus apparent that there is still considerable room for expansion of cultivation. Rice is still by far the most important crop, notwithstanding the rice in importance of jute in recent years. The principal crops are winter rice, autumn rice, jute and rape and mustard.

In the northern half of the district the soil is light ash coloured sandy loam changing gradually as one proceeds south to a stiff clay of similar colour. The former goes by the name of pali, is very retentive of moisture and is capable of producing two crops; the latter is known as knior and ordinarily bears not a single crop. In the southern or khior area isolated patches of laterite soil are to be found here and there, especially on both sides of some of the larger rivers like the Atrai. Nowadays the beds of most of the rivers are deep and wide and the deposit of sand or silt by floods is no longer a factor to be reckoned with seriously over the greater part of the district. In the lower reaches of the Nagar, Punarbhaba and Mahananda owing to the lowness of the river banks floods are of yearly occurrence and large stretches of country are on this account given up to jungle or bear only occasionally crops of boro or spring rice, which is reaped just before rivers rise. Common rotations are autumn rice followed by mustard and jute followed by winter rice or pulse. In the extreme south of the district the Barind makes its appearance. The higher ground in this tract is generally barren and little attempt is made to cultivate it, though with time and determination this can be done successfully. The low ground is a stiff clay of reddish colour and is excellent winter rice land, though like the khior area it does not lend itself to the cultivation of any other

There are at the present day no embankments of any importance in the district though some traces of earlier works of this nature may be seen here and there. The most noticeable of these is a long straight embankment called mokdom bund running from Gajol in Malda to Raiganj. This embankment dates from Mohammedan times. Its object was partly to keep out water from the Nagar river which almost annually overflows its banks, and renders many thousands of acres unculturable, and partly to serve as a highway to the low-lying country on the southwestern border.

Yield per acre: Not available.

Average land per agricultural family—The average size of holding in possession of several classes of cultivators is as follows:

General average					3.10	
Raiyats at fixed	rittes	of re	nts		7-29	acres
Sottled raiyate	•	•	•		3-15	acres
Occupancy		; •			2.54	ACTO
Non-occupancy		•	. •		2:30	ACTES
Under-raiyats		• .	•,	•	.26	acres

An accurate estimate of the rate at which cultivation in the district has extended is impossible, as the cultivated area has never been properly ascertained. The Revenue Survey of 1861-63 took no account of cultivated area, and the figures given in the annual

reports are more or less guess-work. It is probable that between the begining of the last century and the time of the Revenue Survey there was little progress made the this direction, as the Revenue Surveyor speaks of large tracts being covered with dense trees and grass jungle, infested with wild animals. After the famine of 1873-74 price of food-grains began to rise and agriculture at once began to assume a more attractive aspect. As the local cultivators were illsuited to the hard work involved in clearing heavy jungle, the Manager of the hired estate made the experiment of importing Santhals from the Santhal Parganas. The experiment was attempted with such seriousness that many zemindars imitated his example and since then settlers have been migrating into the districts in ever increasing numbers, with the result that this extensive jungle tract has to a great extent been brought under cultivation, and the cultivated area of the district has been increased by about onethird. It must not be supposed that these Santhal settlers retained possession of all the jungle lands that they had acquired. The general practice is for the zemindar to settle the lands to be cleared with them for a period of years at a very low rate. At the expiry of the period, the land having been brought under cultivation and having greatly gone up in value in consequence, the rent is raised to the level of that of similar lands in the neighbourhood, whereupon the Santhals promptly move on to some other spot where uncultivated waste lands are to be had. While the native Bengalee cultivators take their place.

There has up to date been little or no advance in the direction of improvement in agricultural practice. The only agricultural improvement if such it can be called which has really succeeded in the district, is the substitution of the iron sugarcane mill for the primitive wooden machine, with the result that a larger percentage of juice than before is obtained from the canes.

In the settlement the difference between culturable and unculturable fallow or jungle were sometimes artificial, and the ideas of members of the staff might vary. The term "culturable fallow" was rarely used, and big stretches of grass land or maidan which had never been ploughed or had been fallow for over three years appear in the statement below under "old fallow" (culturable but not cultivated). The net result is that of the land classed as "Culturable other than current fallow" that under bamboos, thatching grass and sal woods totalling some 92,000 acres in all is not really available for cultivation for it is already producing articles which are valuable, or indeed, as bamboos, indispensible for the agricultural community. Even the old fallow and perhaps the culturable jungle hardly can be regarded as available for further cultivation and this includes high arid maidans and heaths, the poorest land in the district.

It is significant that Dinajpur, with its scanty population, has as large a proportion of its area under crop, as neighbouring districts with a much denser

population. Indeed if land area alone is considered a greater proportion of the Dinajpur district is cropped than of the Malda district. The Dinajpur figure is 77-7 per cent against 73-3 per cent for Malda. The explanation is that those other districts have a far higher proportion of two-cropped land and possibly that crop yields are lower in Dinajpur than in some other districts. Actually the Malda and Rangpur, Settlement Reports both give estimates of paddy and jute yields which are not very different from those obtained from Dinajpur. So the explanation of low yields may not hold, but in addition to the land of double-cropping one may suggest the absence of subsidiary sources of income and the absence of valuable cash crops, grown in Rangpur as the reason for high proportion of sown area and low population. Agriculture in fact in Dinajpur is extensive and not intensive. Only 91 per cent of the net cropped area is dofasti, twice-cropped, against 27.3 per cent in Malda and 41 per cent in Rangpur. Only the paddy growing districts of the south and west, such as Birbhum, 24-Parganas and Khulna have less.

No study of the economic condition of the agriculturists of the district would be complete without mention of the adhi system or half-share cultivation. The system is both wide-spread and ancient. With regard to its antiquity Buchanan Hamilton classes "share-cultivators" with common labourers, and "low artificers" such as basket-makers and washermen among the poorest class of the society. The adhiers are, however, rather better off than labourers. number is stated to be "very considerable." were men who had one or two ploughs which they worked themselves. If they could work more land they took more in adhi, and for six months in the year they, together with the small raiyats were financed by the big cultivators of the over-thirty-acres class by advances in cash and grain. In 1938 the net sown area shown as cultivated by adhiars varied from over 24 per cent in Bangshihari to 13 per cent in Kaliaganj and Kushmundi. There is general agreement that these figures are on the side of understatement. The variations between different thanas probably represent a real difference and not just slack work.

The system is ideal for paddy. All crop which requires little capital and no expensive operations like weeding, watering, or ditching, such as are necessary for growing jute, onions, sugarcane or chillies. One paddy can be grown very successfully by a man who has no capital except his own strength and ploughs and cattle.

Out of 1,524 adhiars 692 held less than one acre in tenancy right and a further 518 between one and five acres. That is, four-fifths of the adhiars held less land than is necessary to maintain a family and have to take adhi land in addition. As many as 103 were shown as having over ten acres. Perhaps co-sharers' lands were included, but it was agreed that a number of substantial cultivators take settlement of adhi lands to get extra profits and to secure maximum employment of their stock. It is not usually for the same

adhiar to remain long on the same piece of ground. Indeed the attraction of the system is that men can be changed, or could try their fortunes elsewhere every fresh season.

The following shows in percentage the duration of adhi land held by present adhiar:

Up to 3 years				•	56
3 to 6 years	•	•		•	23
6 to 12 years	•	•	•	•	11
Over 12 years			•		10

Such a statement must be accepted with caution and many among the Settlement staff thought that through fear that long possession would create a right, the landholders understated the length of time the adhiar had been in possession, and frightened the adhiar into consent. Nevertheless as returns are more or less uniform there is truth in these figures.

A certain number of people give land in adhi because they are incapable through widowhood, minority, or old age and from sickness from cultivating themselves and supervising work of labourers. But the enquiries made by the kanungos working for the Land Revenue Commission clearly proved that most land is given to adhiars because the raiyat or jotedar has got more land than he can cultivate himself, even if he and his family worked full time on the land.

Although the extent of the system is some indication of its popularity, there is evidence that most jotedars of cultivating stock prefer to cultivate by their own ploughs, or by hired labourers, and give land in adhi because they have not time to superintend the work on all their lands. Big Muslim or Rajbangshi jotedars may cultivate as many as 100 bighas by their own ploughs and labourers, and one Mahisya jotedar was reported to keep as many as 138 ploughs. Such people say that "nij hal" is more profitable then cultivation through adhiars. But poor soil may be better cultivated through adhiras, because it is better to get half of anything than to lose money on paying for labourers. The unfortunate adhiar, being anxious to make any sort of income, has to take any land offered.

On the other hand, the non-resident, or non-agricultural man who has land, prefers to cultivate through adhiars. It is said "Adhi is more suited for gentlemen".

Any proposal to give tenant rights to adhiars must be considered in the light of local ideas as to customary rights. The argument for making adhiars into tenants is that the adhiar is essentially a peasant; a man who cultivates the land for his family subsistence, using his own plought and cattle; that his present position is precarious, and it is not in the public interest to have a large mass of people in the country-side with no permanent interest in the soil. It is true that the adhiar holds a precarious position and instances have been found by the threat of withholding adhi settlement has been used to force surrender in social quarrels, and civil and communal litigation.

The argument for refusing to extend rights to adhiars, is that the adhiars do not regard themselves as having any rights; that they change their land and their "giri" (the jotedars) very frequently; and generally, by the custom of the country are regarded more as a servant of the jotedar or landlord than as independent landholders. They are mostly the poorer villagers and the jotedars finance them through the difficult months. The jotedar also decides what crop is grown, and it is frequently divided at the khamar, or other place appointed by the jotedar, a sign of the master and servant relationship.

It is likely that the barga or adhi system requires different treatment in different parts of the province; but the balance of advantage in dealing with the adhiar of Dinajpur would seem to be on the side of inaction, and of non-intervention, until it is more evident than it is now, that the adhiars themselves really want more permanent rights.

Yield per acre and fertility of the soil—The district average may be put at about 17 maunds an acre for aman paddy. Experiments were carefully undertaken and individual experiments range from 6 maunds per acre to 30 maunds per acre. But the fact that the general trend of so many experiments over five seasons is so similar, is some guarantee of the general accuracy of the results which are .1-7 maunds of unhusked paddy on one-tenth of an acre of land. It does not, however, follow that a cultivator will get 17 maunds an acre from a holding of several acres of rice land, particularly after allowing for deterioration and waste in golas.

Aus paddy—The estimate of the staff based on their own local knowledge and local information is that the yield averages about 12 maunds an acre.

Boro paddy—A very few crop-cutting experiments were done on boro, which show 23 maunds to the acre, almost the same as the 24 maunds given by the Settlement Officer of Malda.

If the cultivators themselves are-to be believed, the fertility of the soil is decreasing, for on all sides one hears the complaint that the soil does not give as much as it did. It is difficult to examine this complaint objectively, for there is so little evidence as to what crop yields are now, or were at different times in the past. The average yield of winter rice, as shown by 280 experiments of one-tenth of acres appears to be 17 maunds to the acre. The Director of Agriculture's figure is 21 maunds, though I believe this to be somewhat too high. If cultivators' own statements were to be believed, the yield would have to be put at about 6 maunds an acre. One must refer to Buchanan Hamilton for any serious estimates of yields in the past. He quotes some farm accounts given him by actual cultivators, and these place the actual yield of amen paddy grown as a single crop at 30 maunds an acre and from 18 to 36, with an average of 28. These were the cultivators' own statements and cultivators are no more likely to have overstated their crops then than now. This, for what it is worth, is some indication that the outturn of paddy is rather less. Sherwill's Revenue Survey Report did not

to give any estimate of yields, but in 1870 the Collector reported to Hunter for his Statistical Account that a good average yield from land paying a rent of Rs. 1/8/- per bigha is from 8 to 10 maunds of paddy a bigha, i.e., 24 to 30 maunds an acre. This is a much higher figure than any one would assert today to be a normal outturn of paddy, but the Collector's justification for his estimate is unknown, and suspicion is thrown upon his statement by the reference to Rs. 1/8/- a bigha or Rs. 4/8/- an acre. Such a rent is most unusual today, being more than twice the district average for raiyati rent, and is altogether incredible for any but a freak rent in 1870. Also a few pages earlier there appears a statement "The soil appears to have decreased in productive power by over-cropping; and it is said that the land now produces less by one-fifth than what it did 25 years ago." Things never are what they were. At the same time a Deputy Collector reporting to Hunter from Rangpur put the yield of ames rice from one-crop land at 21 maunds an acre, and from two-crop land at 15 maunds an acre, figures which do not vary greatly from present estimates, and it is not obvious why yield in Dinajpur should have been so much more than in Rangpur. One must conclude, therefore, that what the Collector wrote in 1870, is poor evidence that the yields are less, though as regards rice, the opinion must be recorded that there is some reason to believe that outturns are less, but that the matter is very open. For other crops there is no evidence that yields have in any way diminished, but rather the contrary. Buchanan Hamilton puts the yield of mustard seed at 51 maunds an acre—not very different from Settlement figures—and of jute, at 9 maunds an acre, as against the 6 of cultivators' own statements, but even his estimate is much lower than any figure which is accepted today.

The opinion of those who have worked long in the district is that cultivation here compares unfavourably with what is seen elsewhere, in Rangpur for instance. Attention has been drawn to the low proportion of two-crop land in the district. One cannot afford to ignore the possibility that under Bengal conditions and with the Dinajpur cultivators' limited desires, a population of under 600 to the square mile is not enough to grow two crops an year, or to get much more out of the soil than is obtained now. As it is, great number of Bihari and Santhal labourers comes into the district every winter to help with the harvesting. Moreover, it appears that ploughing, harrowing, and weeding are all done less thoroughly than in Rangpur. The soil is worked to less fineness than what is seen elsewhere. Large clods are left about and the "mugur" or clod-breaking mallet is comparatively little used. Again weeding of jute and cus paddy is haphazard. Many people have commented upon the casual or half-hearted way in which the summer crops are weeded in the north of the district.

Average land per agricultural family—The same figures have been tabulated from the Economic Enquiries made by Assistant Settlement Officers.

It was noted that though a few 100-acre land were available, there were no giants who held thousands. The results may be compared with those obtained from the Land Revenue Commission. The enquiries of the Land Revenue Officer show that about five-eights of the persons in 3/4th of the families held less than five acres of raiyati land, and hence must, in all probability, have some source of income other than those lands. The enquiries of Assistant Settlement Officers over four years show that families which include between a third and a quarter of the total population are in possession of rather less than two-thirds of the land.

The following is a statement of land employment in the district as at present constituted:

Description							Are	•
Area sown-							26 100	
(ø) Bhadoi .		•	•	•	•	•	76,123	
(a) Aghani .					•	•	552,895

	area so							673,493	Acres

A very high proportion of land in this district is cultivated by bargadars, the ownership being concentrated in the hands of more intelligent jotedars known as the decamers.

The following agricultural statistics are given for a little less than the district area:

Cultivated area and its percentage to the total area	Cultivated waste and its percentage to the total area	Unculturable waste and its percentage to the total area
599,577	57,055	95,191 13
583,035 77	94,012 12	85, 369
	area and its percentage to the total area 599,577 80	area and its percentage to the total area 599,577 80 57,055 7 583,035 94,012

Under this survey there were 6,249 acres of forests and jungles and 20,057 acres under various descriptions of water.

The portion under sal forests is productive addition to the economic resources of the district. But that under other forests, beels and marshy lands, is waste. If reclaimed, this would not only add to the acreage under cultivation of crops, but it would also go in improving the health of the district. The acreage under culturable waste has decreased and that under unculturable waste almost constant. The decrease in the acreage under culturable waste may be attributed to the higher prices in the agricultural commodities in recent years.

The general tendency of the agriculturist is to grow as much aman as they can. The other crops grown include jute, rabi and tobacco. The general productivity has been deteriorating slightly. Proper manuring is rare, nor any rest given to the lands. Fresh silt deposits do not play any conspicuous part. The acreages under aman, rabi and bhadoi are given below:

Prop			Ishaque Survey	Settlement
\man			512,916	504,606
Rabi	•		46,642	60,566
Madoi			56.526	48.329

It will appear from the above that acreage under rabi has decreased and that under aman and bhadoi has increased. The increase in the acreage under sman paddy may be attributed to favourable weather conditions.

The following is a statement of crops in the district:

Paddy-							-		1 1 1 J

A. CENSUS TABLES AND B. OFFICIAL STATISTICS

A. CENSUS TABLES

Explanatory Notes

This part contains 44 tables presenting the 1961 Census data for the district. Most of the tables present materials for each police station and some tables present data for each town. The figures for the district as a whole have been given first followed by the figures for a subdivision and the police stations under a subdivision. The police stations in a subdivision have been arranged according to the location code number assigned to a police station for the purpose of the 1961 Census.

The tables presented in this part do not however cover the whole range of census statistics partaining to the district. The tables on migration and certain other topics have not been included in this volume for want of space. Those will be found in

the West Bengal Census Table Volumes.

The following paragraphs will give a brief account of the tables included in this volume. A detailed note on each of the tables has been given in respective census publications containing 1961 Census Tables. Definitions adopted for certain terms often used in census parlance have been given in Appendix I to this note.

A-Series

General Population Tables

There are, in all, four General Population Tables and three Appendices in this series. But only two Tables i.e., A-I and A-III have been selected for presentation in the District Census Handbook.

Table A-I

This table presents area, density, number of villages inhabited and uninhabited separately, number of towns, occupied residential house and total population with sex break-up. These data have been shown down to police station and each town separately under each police station having such town.

The Director of Land Records and Surveys, West Bengal was unable to furnish the revised area figures of the tegritorial units for the 1961 Census. In absence of the figures furnished the State Survey Department, area figures for different territorial units had to be computed for the purpose of Census from the various available sources. Area figures mostly were taken from the last published Jurisdiction List for the mangas. The case of the area figures of the territory transferred from the Purnea District of Bihar is interesting.

Shri V. Viswanathan, I.C.S. who was appointed Special Commissioner for Bihar-West Bengal boundary, did not give in his report a full list of the villages which were transferred to West Bengal from

the Purnea District of Bihar, Instead, he listed the villages abutting on either side of the new border. His original report, as published under Ministry of Home Affairs Notification No. S.R.O. 2473, dated the 25th October, 1956 (Gasettee of India, Extra Ordinary, Part II—Section 3 of the 25th October 1956) contained a statement showing area and population transferred to West Bengal as a result of the demarcation. According to this statement 913 villages with a total area of 759 Sq. miles were transferred to West Bengal. The statement was subsequently modified by notification No. S.O. 1728, dated the 11th July, 1960. According to the modified statement the area transferred to West Bengal was as follows:

Name of Police Station							Area (in Sq. miles) a per Bihar records		
Thakurganj Chopra Islampur	1	•	•	•	•	,	396-40		
Kishanganj Goalpokhar Karandighi	Í	•		•	•		246-79		
Karandighi		•	•	•	•		149-69		
Total							732-00		

The Director of Land Records and Surveys, West Bengal, who was looked upon as the appropriate authority to furnish area figures for use in the State Tables of West Bengal, stated that he was not in a position to furnish the figures for the territory transferred from the Purnea District of Bihar till his own survey operation in the area was completed. In the meantime he could neither accept nor challenge the figure (732.88 Sq. miles as per Bihar records) quoted in Shri Viswanathan's modified report.

As figures according to the Survey Directorate of the State were not yet available, reliance had necessarily to be placed on other sources from which the police station area figures could be computed, even if provisionally, for the purposes of the census. But figures collected from different sources gave different results. The Director of Land Records and Surveys, West Bengal, obtained villagewise area figures of the transferred territory from the Director of Land Records, Bihar. The figures were added up in the Census Office and the following result obtained:

AREA TRAMPERED PROM BURAN

1	Thekurgeni P.S.) .	• •	204-47	Sq. miles
3	Chopra P.S. Islampur P.S. Kishangani P.S.		•	. 199-66	,
5	Goalpokhar P.S.) Karandighi P.S.	•	• •	. 247-09 . 151-77	
	Total .			. 726-90	

According to a computation made at the office of the Registrar General from the records of the 1951

Census of Bihar, the area figures of the transferred territory were;

AREA TRANSPERSED FROM BUKAR

1	Thekurgani P.S	š.					60-5	Sq. miles
2	Chopra P.S.	•	•	•	. •	•	139.7	99
4	Islampur P.S. Kishanganj P.S		2	•	•	•	181-4 186-7	••
5	Goalpokhar P.S	J.		:		:	73.0	**
6	Karandighi P.S		•	•	•	•	150-7	99
	Total			_			742-4	So, miles

According to the figures compiled by the Superintendent of Census Operations, Bihar, for the purposes of his own tables for the 1961 Census, these area figures were as follows:

AREA TRANSFERRED FROM BIHAR

1 2 3 4 5 6	Thakurgani P Chopra P.S. Islampur P.S. Kishangani P. Goalpokhar P Karandighi P.	s. :	•	•	•	•	56-96 146-11 193-26 180-51 66-30 150-24	Sq. miles
	Total						733-36	Sq. miles

The matter was referred to the Registrar General for decision. He suggested that the figure worked out by the Superintendent of Census Operations, Bihar, might be adopted. Accordingly, these figures, rounded up to one place of decimal, have been used in computing the area figures of the new police stations comprised in the transferred territory. It is perhaps needless to emphasise that the figures are provisional and subject to revision on the result of the survey conducted by the Director of Land Records and Surveys, West Bengal.

Another contentious matter was introduced by that portion of the ceded territory which was transferred from Chopra Police Station of West Dinajpur District to Phansidewa Police Station of Darjeeling District under notification No. 1177 G.A. dated the 20th March, 1959. The notification did not describe the villages which were involved in the jurisdictional change and the river Mahananda, the northern bank of which now constituted the boundary between two police stations and, for that matter, between two districts, was found to cut through one or two revenue mauzas. It was observed, however, that this portion of the transferred territory roughly coincided with the 12 villages of the old Thakurganj Police Station of Purnea District which were transferred to West Bengal. The area figure of 56.96 Sq. miles, furnished for these villages by the Superintendent of Census Operations, Bihar, was therefore taken to be the area of this tract.

The area of a town administered by the Municipal Commissioners was obtained from the civic authority concerned. For non-municipal towns, the area figures were obtained by adding up the area figures of the constituent manzas. The density figures in the Table A-1 have been calculated on the computed area figures,

Occupied Residential House meant the occupied Census-house. All Census-houses used wholly or partly as dwellings including a parlour or sitting room, a kitchen, which were located in structures auxiliary to the main house were counted as occupied Census-houses, but cow-sheds, grain-gollas etc., though auxiliary to the main house; were excluded.

Table A-III

This table gives an account of the distribution of inhabited villages for the district and each police station in accordance with the size of population which has been broadly classified by seven groups i.e., less than 200, 200-499, 500-999, 1,000-1,999, 2,000-4,999, 5,000-9,999 and 10,000 and above.

B-Series

(i) General Economic Tables

The B-Series tables show the distribution of population by economic activity co-related with sex, age and educational level. The classification by economic activity has been made first by workers and non-workers and then the workers have been further classified into nine broad Industrial Categories.

In the 1941 and earlier Gensuses, religion was adopted as the basis on which primary sorting and tabulations were done. The population classified by religion and sex, thus obtained, was given in the village statistics. In the 1951 Census Economic Classification substituted the classification based on religion. For this purpose population was divided into eight Livelihood Classes and in each livelihood class the self-supporting persons and their dependents were included. At the 1961 Census the concept of dependency was abandoned for Economic Classification of population and the concept of work was adopted.

The workers in the nine Industrial Categories shown in the Primary Census Abstract conform to the industry divisions as given in the Standard Industrial Classification as follows:

Category

Industry Division

I Cultivator
II Agricultural Labourer
III In Mining, Quarrying,
Livestock, Forestry,
Fishing, Hunting and
Plantations, Orchards
and allied activities
IV At Household Industry

V In Manufacturing Other than House-

hold Industry

Minor Groups 000, 001, 002, 003 and 004 from Division 0 Division 0 except Minor Groups 000 to 004 and Division I (unless carried on in household level)

Division 0 except Minor Groups 000 to 004, Divisions 1, 2 and 3 (it carried on in household level)

Division 2 and 3 (unless carried on in household level)

VI In Construction
VII In Trade & Commerce
VIII In Transport, Storage
and Communications

Division 5
Division 7

IX In Other Services 12 1 Divisions 5, 8 and 9

Definitions of Workers and Non-workers have been given in Appendix I,

Table B-I is the basic economic table of 1961 Census. It shows the distribution of persons into nine broad Industrial Categories of workers and non-workers, with her break-up under each category. This table also shows the distribution of the population into four broad age-groups under each category. The data have been presented for the district and each police station with rural-urban break-up. Table B-II which shows similar figures for the towns has been combined with Table B-I and entries for each town have been shown under the police station where it is situated.

Table B-III

This table has been prepared in two parts i.e., B-III Part A and B-III Part B, of which the former relates to urban areas and the latter to rural areas. In both the parts each of the nine categories of workers and non-workers have been cross-tabulated by literacy and educational levels with sex break-up. The figures have been presented down to police station and town.

Table B-IV

This table shows the distribution of workers engaged in household industry and non-household industry, trade, business, profession or service by sex, industrial divisions, major groups (Appendix II) and by status of employment i.e., "Employer", "Employee", "Single Worker" and "Family Worker" (Appendix I). In the case of workers engaged in household industry the status of their employment has been classified into two i.e., "Employee" and "Others".

The figures have been presented for the working population except cultivators and agricultural labourers of rural and urban areas separately down to police station.

Table B-V

This table gives the Occupational Classification (Appendix IV to this note) of persons who are working in non-agricultural sector. In this table data have been shown for rural and urban working population engaged in non-agricultural sector separately with sex break-up, by occupational group. The figures have been presented down to police station.

Table B-VI

This table presents the distribution of workers except those engaged in agricultural sector into occupational division and further they have been classified by four broad age-groups and age not stated, and by educational levels. This table shows the figures of urban areas only for the district as a whole.

This table presents workers engaged as cultivators, agricultural labourers and at household industry classified by the nature of their scoondary work as cultivators, agricultural labourers and at household industry by sex. The figures have been shown for rural and urban working population separately down to police station. Figures have been presented by major groups of industries in the case of the district and in the case of police stations figures have been shown only against the divisions of the Standard Industrial Classification.

Table B-VII Part B

This table furnishes the distribution of workers engaged principally in non-agricultural and non-household industry in accordance with their secondary work at household industry only. These workers have further been classified by sex, industrial divisions and major groups. These figures have been presented down to police station.

Table B-VIII Part A

This table accounts for the distribution of unemployed persons of age 15 and above who are seeking employment for the first time and who were employed before but now out of employment by broad age-groups. They have further been classified by sex and educational levels. This part relates to only the urban population and has been shown for the total urban population of the district as a whole.

Table B-VIII Part B

This part of the table contains the same material as that contained in Part A. The difference is that this part shows the figures for the rural population only down to police station. Further classification of the educational levels beyond matriculation has not been shown for the rural unemployed persons and the classification by age-groups has also not been done.

Table B-IX

This table shows the distribution of all the non-working population by broad age-groups as in Table B-I. They have further been classified by sex and eight different types of activity of non-workers (for definition of different types of activity see the Appendix I). The figures have separately been shown for rural and urban population and down to police station.

(ii) Household Economic Tables

Tables B-X to B-XVIII account for the economic activity of a household as unit. The related figures have been compiled and tabulated from the data extracted from the entries of the Household Schedules on the basis of 20 per cent Sample. These tables have been prepared in the Mechanical Tabulation

Unit of the office of the Registrar General of India, New Delhi. The figures of different tables relate to the number of households engaged in cultivation or household industry or both, size of and or interest in land cultivated and/or the household industry conducted by the household and the number of family workers and/or hired workers engaged in either of the two activities separately or together.

C-Series

Social and Cultural Tables

Table C-I

This table gives the composition of the members in a household. Sample Households have been classified by size, composition by family and nonfamily members, and by economic activity. The households engaged in cultivation have been further classified by size of land holding. This table is of sociological interest indicating, as it does, the strength of the joint family system. The material of this table has been collected from the Household Schedules on the basis of 20 per cent Sample and the table has been prepared in the Mechanical Tabulation Unit of the office of the Registrar General of India, New Delhi. The figures have been presented for total, rural and urban households for the district only.

Table C-II

This is a very important demographic table. This table gives an account of distribution of rural and urban population separately by sex, age-groups and marital status. The entire population in 0-9 years age-group has been treated as never married and as such no other classifications have been shown against them. This table will give the readers an idea about the trend of variations in the proportions in the various marital status conditions over the last ten years. The figures have been presented down to police station.

Table C-III Part A

This part of the Table C-III relates to the total population of both the rural and urban areas. This table shows the distribution of the population by sex, age-groups and educational levels. The figures have been presented down to district only.

Tables C-III Part B and Part C

These two parts contain the same data as contained in Part A. Only difference is this that Part B deals with the urban population, while Part C deals with rural population. Again in regard to educational levels more detailed educational classifications have been adopted in the case of urban area than those in rural area. In Part B figures have been presented for the total urban population of the district as a whole. Part C represents the population down to police station.

Table C-V

This table presents the distribution of population by sex and mother-tongues. There are as many as 69 mother-tongues spoken in this district. The figures have been shown for rural and urban areas separately down to police station.

Table C-VII

This table shows the distribution of population for rural and urban areas separately by sex and religions. The population has been classified into six main religions arranged alphabetically and the population belonging to other religions have been shown together under "Other Religions". There is another classification which describes "Religion not stated". The figures have been presented down to police station.

Table G-VIII Part A

This table presents the distribution of the scheduled caste population by sex, industrial categories of workers and non-workers and by literacy. The figures for the rural and urban scheduled caste population have been shown separately down to police station. This table is considered important from the view point of the classification of scheduled caste population into various economic activities.

Table C-VIII Part B

This table contains the same distribution and presentation of data as in C-VIII Part A. This part relates to only scheduled tribes.

SCT—Series

Special Tables for Scheduled Castes and Tribes

Table SCT-I Part A

This table gives an account of the distribution of the scheduled caste population by sex and industrial categories of workers and non-workers. The entire scheduled caste population belong to as many as 55 castes arranged alphabetically. Persons who returned themselves as belonging to scheduled castes with out specifying the names of the castes have been shown under "Unclassifiable". There is another interesting classification of special occupations i.s., "Tanning and currying of hides and skins" and "Scavenging". The figures have been presented for rural and urban areas separately down to police station.

Table SCT-I Part B

This table contains the same distribution and presentation as in Part A. This table relates to scheduled tribes which are as many as 22 in numbers in this district and arranged alphabetically. There is no column for the special occupations in this part,

Both these parts are interesting as they give detailed information about individual castes and tribes. 7

Tables SCT-III Part A(i) to Part B(ii)

These tables show the distribution of the scheduled caste or scheduled tribe population by name of caste or tribe, sex and educational leavels for rural and urban areas separately down to district only.

Tables SCT-V Part A & Part B

These tables show the distribution of the households belonging to scheduled castes and tribes engaged in cultivation showing their interest in land and size of land. The figures have been collected from the household schedule on the basis of 20 per cent Sample. These tables have also been prepared in the Mechanical Tabulation Unit of the office of the Registrar General of India, New Delhi. The figures have been presented for rural areas only for the district level. Part A of the table relates to the scheduled castes and Part B to the scheduled tribes.

Table SC-I

This table shows the distribution of the scheduled caste population by sex, by 3 main types of activities non-working and educational levels. Other types of activity have been clubbed together and shown

under "Others". The figures have been presented for rural and urban areas separately only for the district.

Table ST-I

This table gives an account of the distribution of the scheduled tribe population by name of tribe, mother-tongue, bilingualism and by sex. The figures have been presented only for the district.

Table ST-II

This table corresponds to SC-I in respect of the manner of distribution and presentation except in that distribution by educational levels has not been shown. It relates to scheduled tribes.

Industrial Establishments

This table accounts for the distribution of different industrial establishments returned in the Housing Census of October, 1960 as carried on in Census. house(s) by villages and towns under each police station separately. The nature of industry has been indicated by the minor groups of the Standard Industrial Classification (Appendix II). Number of such industrial establishments has been put within brackets against each minor group. The data have been collected from the Houselists prepared during the house-numbering operation.

Definitions

Consus House: A census house is a structure or part of a structure inhabited or vacant, or a dwelling, a shop, a shop-sundwelling or a place or business workshop, school, etc., with a separate entrance.

If a building has a number of flats or blocks which have separate entrances of their own and are independent of each other giving on the road or a common staircase or a common courtyard leading to a main gate, they will be considered as separate census houses. If within an enclosed or open compound there are separate buildings then each such building will also be a separate census house. If all the structures within an enclosed compound are together treated as one building then each structure with a separate entrance should be treated as a separate census house.

Commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so.

Literacy: A person who can neither read nor write or can merely read but cannot write in any language was treated as illiterate. A literate is a person who can both read and write with understanding. The test for reading is ability to read any simple letter either in print or in manuscript with felicity. The test for writing is ability to write a simple letter.

If the person can both read and write and has also passed a written examination or examinations as proof of an educational standard attained the highest examination passed to denote the educational level attained by him was recorded.

Mother-tongue: Mother-tongue is language spoken in childhood by the person's mother to the person or mainly spoken in the household. If the mother died in infancy the language mostly spoken in the person's home in childhood was taken as mother-tongue. In the case of infants and deaf mutes the language usually spoken by the mother was written.

Worker: The basis of work will be satisfied in the case of seasonal work like cultivation, livestock, dairying, household industry, etc., if the person has had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business or commerce the basis of work will be satisfied if the person was employed during any of the fifteen days preceding the day on which the household was visited for enumeration. Persons temporarily incapacitated from work at the time of Census enumeration due to illness or other causes are also treated as Workers. An under-trial prisoner in prison during the Census enumeration is also treated as worker if he did some productive work before he was apprehended. Con-victs in a prison or long term inmates of hospitals or mental institutions, are not however treated as Workers. Work includes not only actual work but effective supervision and direction of work. Persons under training as apprentices with or without stipend or wages will be regarded as working. An adult woman who is engaged in household duties but doing no other productive work to augment the family's resources should not be considered work to augment the family's resources should not be considered. as working. Possons like beggars, pensioners, agricultural or non-agricultural, royalty, rent or dividend receivers, who may be earning an income but who are not participating in any productive work should not be treated as working. A public or social service worker who is actively engaged in public service activity or a political worker who is also actively engaged in furthering the political activity of his party will be regarded as a worker.

Status of Employment: (i) An Employer is a person who has to employ other persons in order to perform the work. That is to say, such a person is not only responsible for his own personal work but also for giving work to others in the business. But a person who employs domestic servants for household duties or has subordinates under him in an office where he is employed

by others, is not an employer, even if he has the power to employ another person in his office on behalf of his own employer or employers.

- (ii) An Employer is a person who usually works under some other person for salary or wages in cash or kind. There may be persons who are employed as managers, superintendents, agents, etc., and in that capacity employ or control other workers on behalf of their own employers. Such persons are only employees; as explained above, and should not be regarded as employers.
- (iii) A Single Worker is a person who works by himself but not as Head of household in a Household Industry. He is not employed by any one else and in his turn does not employ anybody else not even members of his household except casually. This definition of a Single Worker will include a persons who works in joint partnership with one or several persons hiring no employees, and also a member of a producers' co-operative. Each one of the partners or members of such producers' Co-operatives should be recorded as "Single Worker".
- (iv) A Family Works is a member who works, without receiving wages in cash or kind, in an industry, business or trade conducted mainly by members of the family and ordinarily does at least one hour of work every day during the working season. Such an industry should be on a scale larger than what has been covered in 'Household Industry' whether run at home or away from home in town or village and even away from village in rural area and should ordinarily be in the nature of a recognised partnership, joint stock company or registered factory. For the purpose of this definition members of a family may be drawn from beyond the limits of the household by ties of blood or marriage. The family worker may not be entitled to a share of the profits in the work of the business carried on either by the person or head of the household or other relative.

Members of the household who help solely in household duties should not be treated as family workers.

Household Industry: A Household Industry is defined as an industry conducted by the Head of the household himself and/or mainly members of the household at home or within the village in rural areas and only at home in urban areas. The industry should not be run on the scale of a registered factory. Thus the main criterion for a Household Industry is the participation of one or more members of a household in rural areas. In the urban areas the industry should be confined to the house.

A Household Industry should relate to production, processing, servicing, prepairing or making and selling of goods. If does not include professions such as pleader or doctor or barber or waterman or astrologer.

Non-workers: All persons who are not workers are non-workers. They should fall under any one of the following categories:

- Full time student or child attending school who does no other works.
- A person engaged in unpaid home duties (like housewife or other adult female).
- Any dependent, including an infant or child not attending school or a person permanently disabled from work because of illness or old age.
- 4. A retired person who is not employed again, rentier, person living on agricultural or non-agricultural royalty, rent or dividend or any other persons of independent means for securing which he does not have to work and who does no other work.
- Beggars, vegrants or independent women without indication of source of income and others of unspecified source of existence.
- A convict in jail or an inmate of a penal, mental or charitable institution.
- A person who has not been employed before but is seeking employment for the first time.
- A person employed before but now out of employment and seeking employment.

	Manufacture of shoes and other leather footwear Manufacture of clothing and wearing apparel (except footwear) made of leather and fur	311 312
	Manufacture of leather products (except those covered by code Nos. 311, 312), such as leather upholstery,	
	suitcases, pocket books, cigarette and key cases, purses, saddlery, whip and other articles	313
	Repair of shoes and other leather footwear	314 315
32	Rubber, Petroleum and Coal Products	***
	Manufacture of tyres and tubes	320 391
•	Manufacture of rubber goods used for industrial purpose	321 322
	Manufacture of all kinds of other rubber products from natural or synthetic rubber including rubber raincoat	323
	Productions of petroleum, kerosene and other petroleum products in petroleum refineries Production of coaltar and coke in coke oven	324 325
	Manufacture of other coal and coaltar products not covered elsewhere	326
73	Chemicals and Chemical Products	
	Manufacture of basic industrial chemicals such as acids, alkalis and their salts not elsewhere specified.	330
	Manufacture of dyes, paints, colours and varnishes	331
	Manufacture of fertilizers	992
*	Manufacture of ammunition, explosives and fire works	333 334
W. C.	Manufacture of medicines, pharmaceutical preparations, perfumes, connectes and other tollet prepara-	
	tions except soap	335
45.	Manufacture of soap and other washing and cleaning compounds Manufacture of turpentine, synthetic, resin and plastic products and materials (including, synthetic rubber)	335 336 337
5.60	Manufacture of common suit Manufacture of other chemicals and chemical products not covered above (including inclible oils and futs)	338 339

do)	Description	SOK
lele:	a 2 & 3-Magnifesturing—could.	
	Non-metallic Mineral Products other than Petroloum and Coal	1
	Manufacture of structural clay products such as bricks, tiles	
	Manufacture of cement and cement products	
	Manufacture of time	- 1
	Manufacture of structural stone goods, stone dressing and stone crushing	
	Manufacture of stone images	3
	Manufacture of plaster of paris and its products	
	Manufacture of mica products	•
5	Manufacture of earthenware and earthen pottery	9
	Manufacture of chinaware and crockery	5
	Manufacture of glass bangles and beads	•
	Manufacture of glass apparatus	9
	Manufacture of earthen toys and artwares except those covered by code No. 355	9
	Manufacture of glass and glass products except optical and photographic lenses and glass products covered	
	above Manufacture of other non-metallic mineral products not elsewhere specified	9
	Basic Metals and their Products except Machinery and Transport Equipment	
	Manufacture of iron and steel including smelting, refining, rolling, conversion into basic forms such as	
	billets, blooms, tubes, rods	9
	Manufacture including smelting, refining of nonferrous metals and alloys in basic forms	9
	Manufacture of structural steel products such as joist, rail, sheet, plate	9
	Manufacture of iron and steel furniture	9
	Manufacture of aluminium products	9
	Manufacture of metal products (other than of iron brass, bell metal and aluminium) such as tin can.	9
	Enamelling, galvanising, plating (including electroplating) polishing and welding of metal products. Manufacture of sundry hardwares such as G.I. pipe, wire net, bolt, screw, bucket, cutlery (This will also	3
	include the manufacture of sundry ferrous engineering products done by jobbing engineering concerns	_
	which cannot be classified in major groups 36, 37, 38 and 39)	3
	Machinery (All kinds other than Transport) and Electrical Equipment	_
	Manufacture and assembling of machinery (other than electrical) except textile machinery	3
	engines, road rollers, tractors	9
	Manufacture of machine tools	5
	Manufacture of heavy electrical machinery and equipment such as motors, generators, transformers.	
	Manufacture of electric lamps and fans	
	Manufacture of insulated wires and cables	
	Manufacture of electronic equipment such as radio, microphone	:
	Manufacture of electric machinery and apparatus, appliances not specified above	:
	Transport Equipment	
	Manufacture, assembly and repairing of locomotives	:
	code No. 363	9
	Manufacture and assembling of motor vehicles of all types (excepting motor engines)	_ :
	Manufacture of motor vehicles engines parts and accessories	- :
	Manufacture of bicycles and tricycles and accessories such as saddle, seat frame, gear	
	Building and repairing of water transport equipment such as ships, boats and manufacture of marine engines Manufacture and repair of air transport equipment including aeroplanes, aeroengines	3
	Repairing of bicycles and tricycles	•
	Manufacture of other transport equipment not covered above such as animal drawn and handdrawn vehicles	
		•
	Miscellaneous Manufacturing Industries	
	Manufacture of optical instruments and lenses, opthalmic goods and photographic equipment and supplies Manufacture of scientific, medical and surgical instruments and equipment and supplies	
	Assembling and repairing of watches and clocks	
	Manufacture of jeweilery, silverware and wares using gold and other precious metals Manufacture and tuning of musical instruments	
	Manufacture and tuning or musical instruments Manufacture of stationery articles not covered elsewhere such as pencil, penholder, fountainpen	9
	Manufacture of sports goods	3
	Manufacture or sports goods not assignable to any other group	

		Miner Group (Code)
	Construction of the second of	and the second second
	Construction and maintenance of buildings including erection, flooring, decorative constructions, elec- trical and sanitary installations Construction and maintenance of roads, railways, bridges, tunnels	400 401
	Construction and maintenance of telegraph and telephone lines Construction and maintenance of water ways and water reservoirs such as bunds, embankments, dam, canal, tank, tubewells, wells	402 403
Division	5—Electricity, Gas, Water and Sanitary Services	
50	Electricity and Gas Generation and transmission of electric energy Distribution of electric energy Manufacture of gas in gas works and distribution to domestic and industrial consumers	500 501 502
51	Water Supply and Sanitary Services	
	Collection, purification and distribution of water to domestic and industrial consumers Garbage and sewage disposal, operation of drainage system and all other types of work connected with public health and sanitation	510 511
Division	6-Trade and Commerce	
60	Wholesale Trade	
	Wholesale trading in cereals and pulses Wholesale trading in vegetables, fruits, sugar, spices, oil, fish, dairy products, eggs, poultry and other food stuff (not covered elsewhere) Wholesale trading in all kinds of fabrics, and textiles products such as garments, hessian, gunny bag, slik and weollen yarn, shirtings, suitings, hosiery products Wholesale trading in beverages, such as tea (leaf) coffee (Seed and powder), acrated water Wholesale trading in intoxicants such as wines, liquors Wholesale trading in other intoxicants such as opium, ganja, etc. Wholesale trading in tobacco, bidi, cigarettes and other tobacco products Wholesale trading in animals	600 601 602 603 604 605 606 607
61	Wholesale trading in medicines and chemicals Wholesale trading in fuel and lighting products such as coke, coal, kerosene, candle Wholesale trading in tollets, perfumery and cosmetics Wholesale trading in metal, porcelain and glass utensils, crockery, chinaware Wholesale trading in wooden, steel and other metallic furniture and fittings Wholesale trading in footwear Wholesale trading in tyres, tubes and allied rubber products Wholesale trading in petrol, mobil oil and allied products Wholesale trading in other household equipment not covered above	606 610 611 612 613 614 615 616 617 618
62	Wholesale trading in bricks, tiles and other building materials	620 621
63	Wholesale trading in paper and other stationery goods Wholesale trading in agricultural and industrial machinery equipment and tools and appliances other than electrical Wholesale trading in electrical machinery and equipment like motor, battery, electric fan, bulb Wholesale trading in all kinds of transport and storage equipment Wholesale trading in skins, leather and fur Wholesale trading in clocks, eye glasses frames Wholesale trading in hardware and sanitary equipment Wholesale trading in scientific, medical and surgical instruments Wholesale trading in precious metals and stones, gold and allverwares and jewellery Wholesale trading in all goods not covered above	630 631 652 633 634 635 636 637 638 639
64	Ratail Trade	
	Retail trading in cereals, pulses, vegetables, fruits, sugar, species, oil, fish, dairy products, eggs, poultry Retail trading in beverages such as tea (leaf), coffee (Seed and powder), acrated water Retail trading in intoxicants such as wines, liquors Retail trading in tobacco, bidi, eigarettes and other teacco products Retail trading in fuel such as coke, coal, firewood and kerosene Retail trading in foodstuffs like sweetmeat condiments, cales, biscuits, etc. Retail trading in animals Retail trading in straw and fodder	640 641 642 643 644 645 646 647
65	Retail trading in fibres, years, dhoti, serce, readymade garments of cotton, wool, silk and other textiles and hosiery products: (this includes retail trading in piece-goods of cotton, wool, silk and other textiles). Retail trading in toilet goods, perfames and counciles Retail trading in medicines and chemicals Retail trading in footwear, head-goar such as het, umbrelle, shoes and chappale	650 651 652 658

Norm:

Names occurring after hyphen (-) have been introduced by the Linguist to indicate groupings.

*Denotes that the mother tongue is unclassified in Linguistic Survey of India.

†Denotes that the mother tongue though classified in Linguistic Survey of India is either tentatively reclassified or considered unclassifiable by the Linguist.

*†Denotes that the mother tongue is unclassified by Grieron but is tentatively classified by the Linguist.

Notati

Mother tongues printed in italies belong to countries outside the Indian Sub-continent.

Names occurring after hyphen (-) have been introduced by the Linguist to indicate groupings.

*Denotes that the mother tongue is unclassified in Linguistic Survey of India.

†Denotes that the mother tongue theselfed in Linguistic Survey of India is either tentatively reclassified or considered unclassifiable by the Linguist.

*†Denotes that the mother tongue is unclassified by Grieron but is tentatively classified by the Linguist.

Nors: The Death Rate is the number of annual death per 1,000 of the same sex calculated on the population of 1951.

[•]Relates to the period 1951-58, †Rates have been calculated on per thousand of live and still births.

^{*}The land revenue demand and collection figures relating to the post-zamindari abolition period being maintained according to the Bengali calender years, the figures could not be supplied according to the financial years. However, the Bengali years 1362 B.S. to 1368 B.S. approximately correspond to the linancial years 1955-56 to 1961-62.

**Islampur subdivision has been formed with the Kithanganj area of Bihar transferred to West Bengal with effect from 1.11-56. The figures relating to Islampur sub-division have, therefore, been furnished separately from 1363 B.S. corresponding to the financial year 1956-57.

†The figures of cess demand of Islampur subdivision represent the assessments made under the Bihar Cess Act.

PART III

VILLAGE DIRECTORY

This Directory renders an account of each Village and each Town

THE VILLAGE DIRECTORY

Explanatory Note

The Directory renders an account of each Village, entered on the Jurisdiction Lists for each Thana maintained by the Director of Land Records and Surveys, West Bengal. For villages included in town figures are given for the town and not for the separate villages which it contains. In case of a municipal town figures are presented separately for each Ward. It gives the Jurisdiction List number, name, area of the village, number of occupied houses, Census households, total population, Scheduled Caste and Scheduled Tribe population, number of literates, and workers classified into the following nine Industrial Categories of Workers and Non-workers:

I As Cultivator

II As Agricultural Labourer

III In Mining, Quarrying, Livestock, Forestry, Fishing, Hunting, Plantations, Orchards and allied activities

IV At Household Industry

V In Manufacturing other than Household Industry

VI In Construction

VIII In Trade and Commerce

VIII In Transport, Storage and Communications

IX In Other Services

X Non-workers

These basic data are presented police stationwise first for the rural portion and next for urban portion in this Directory. A notional map of the Police Station has been given at the beginning of the Village Directory of each Police Station showing the Jurisdiction List number of each village and the location of town, if any, and inset map of the district has also been given to show the location of the Police Station in the district. An alphabetical list of villages has been given preceding the directory. This list shows the Jurisdiction List number of each village and the names of the villages arranged alphabetically and its population in 1951 and in 1961. The thana map and the alphabetical list together facilitate location of any village in the Village Directory as well as on the spot.

A village, as a general rule, is the revenue survey mauza. The uninhabited mauzas and the mauzas that have been completely merged in urban areas have been indicated accordingly. In respect of the

villages which are partly included in urban areas and partly outside the limits of a town, the particulars for the portion included in urban area have been clubbed together with the particulars furnished for the corresponding town and for the portion lying outside the town limits i.e., included in the rural area, the data have been show in the Village Directory against the corresponding manzas. The area figures of the villages have been obtained from the 1951 Census Handbooks. For the police stations under Islampur Subdivision, village area figures furnished by Superintendent of Census Operations, Bihar have been used.

The area of the municipal towns has been presented according to the figures available from the respective municipalities. The area in respect of the non-municipal towns has been computed from the area figures of the constituting mauzas.

For the definition of a Worker and Non-worker and detailed description of nine Industrial Categories of workers, the Explanatory Note to the Primary Census Abstract and other economic tables in Part II of this Volume may be referred to.

Symbols will frequently be seen against village or town. They will indicate that the institutions offering the particular facilities which the symbol denots is situated within the village or town. These facilities are shown by symbols as explained below against the name of village and town:

(a) Schools:
P = Primary Schools
H = High Schools

(b) Medical facilities:
D=Dispensaries
Rhc=Rural Health Centres
Hos=Hospitals
Mew=Maternity Child Welfare Centres

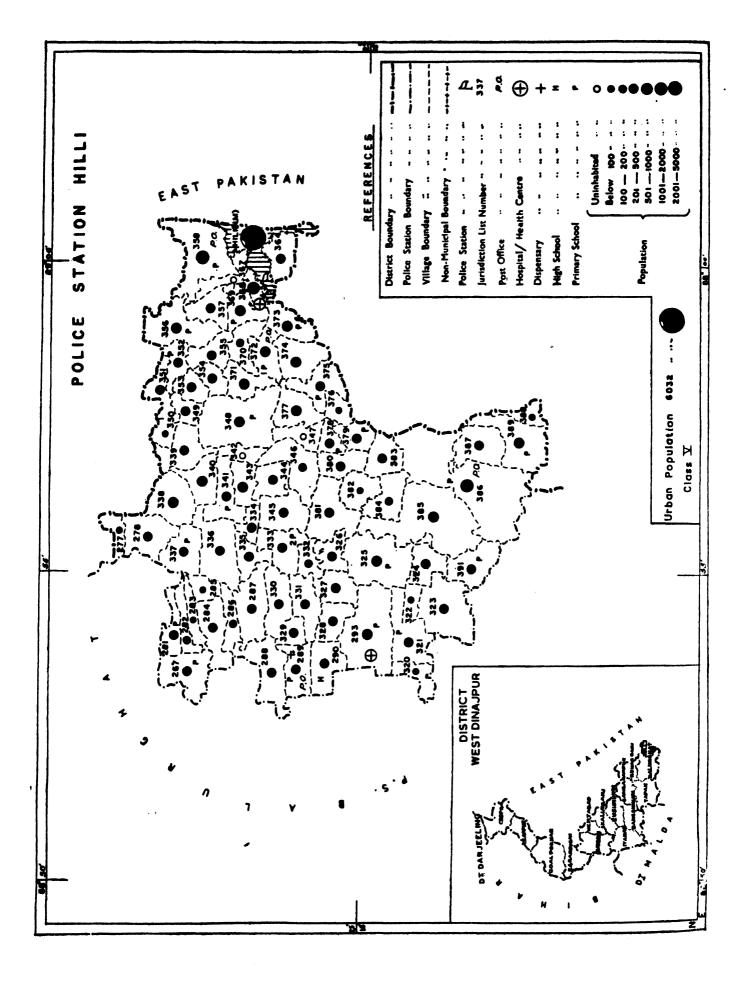

(c) Post Office:
Post Office

(d) Electricity: E = Electricity

(e) Library:
L= Library

Where figures like 5P or 2H or 2Hos etc., occur they denote that the mauzs or the town has five Primary Schools or two High Schools or two Hospitals etc.
